CATALOG 23.A

Klein

Klein

Klein

THE NEW WEBSITE IS AN IMPORTANT ACHIEVEMENT SINCE IT LEADS OUR KLEIN BRAND INTO THE DIGITAL WORLD WITH A WHOLE NEW LOOK

sistemiklein.com

The features we have added are crucial for a better experience and faster navigation. Our entire product catalogue is on our website and organised into various sections, all product pages are supported with photos, technical images and details. In 2022 we launched the aluklein.com website dedicated entirely to our tools that work aluminium, plastic and advanced materials.

WHAT'S NEW?

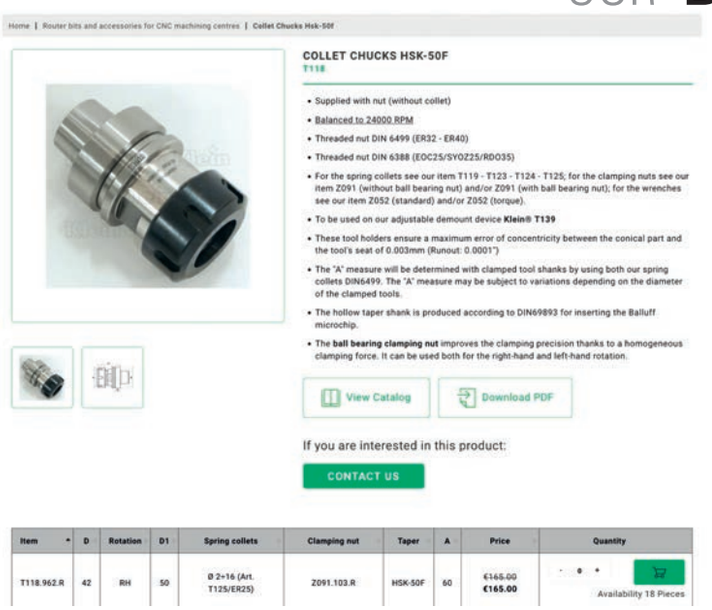
- The main site and the B2B shop are now one single website
- New filters for quick product searches
- Smart search toolbar
- New design and graphics

WHAT ELSE DO WE OFFER?

- Website available in 5 different languages
- Download area with all our catalogues and guides
- Mobile version available
- News about our products and projects

DOWNLOAD THE CATALOG

OUR B2B



SHOP PORTAL FOR OUR DEALERS & DISTRIBUTORS

- Prices and item-stock always up-to-date
- Worldwide shipping within 48h
- Private download area with files and catalogues
- Step-by-step tutorial for purchasing
- Complete range of tools for working different materials
- One of the largest selection of tools for the CNC industry

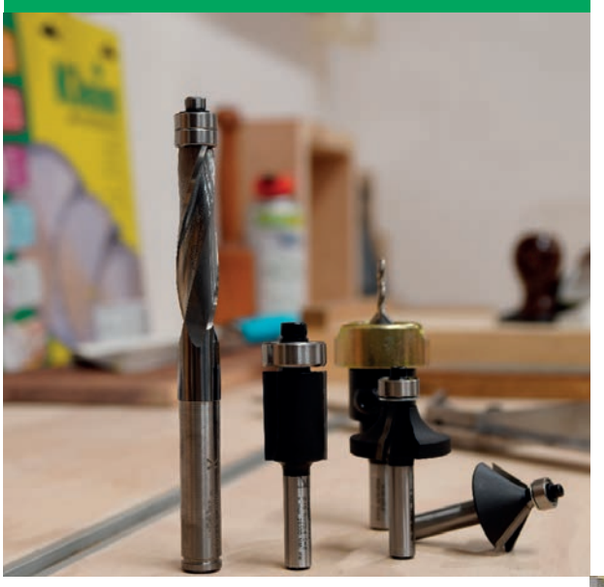
LEADING MANUFACTURER OF TOOLS FOR WOODWORKING, ALUMINUM AND PLASTICS FOR 40 YEARS



OUR HISTORY

Since 1987, the story of Sistemi begins in Pesaro in the Marche region, the land of furniture, kitchen and motors. Like other companies in this area, we initially specialised mostly in supplying equipment and cutting tools for woodworking and wood derivatives, but over the years we have become a leader and reference point in this sector in the world, recognised through our own Klein brand.

The company is now a leader in the market thanks to continuous investment in the use of modern and innovative technologies and in the training our staff of specialised technicians, designers and young, dynamic sales experts, who are always ready to meet the demands of global competition.

Today, we export our products to more than 60 countries worldwide, consolidating our presence with the best dealers in the sector, always aiming at "customer satisfaction".

OUR JOB

In order to create products of high quality value, we use the best raw materials.
Their procurement and selection is always managed on an annual basis to ensure a constant supply. In this way, we are able to guarantee more than 10,000 parts ready in stock.

The design of our products starts on CAD stations by specialised technicians who study and design the tools with precision down to the smallest detail in order to always offer a high-performance end product.

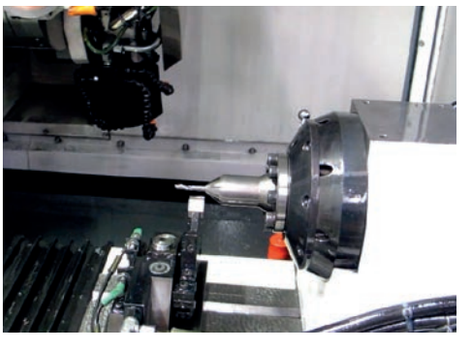
MADE IN ITALY

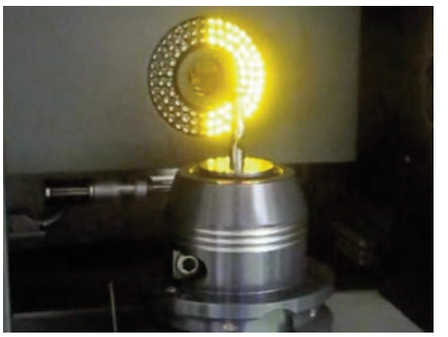
acimall
ITALIAN WOODWORKING TECHNOLOGY ASSOCIATION

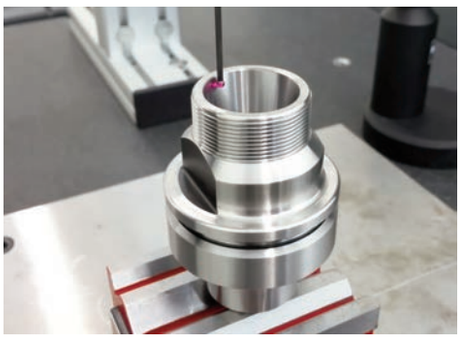
OUR PRODUCTION

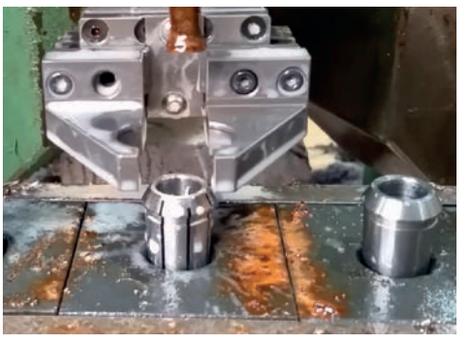
Production is carried out on state-of-the-art machines, followed by scrupulous inspection using high-precision instruments to guarantee the highest quality of all Klein® products. This makes them suitable for the most scrupulous industry and customers who are increasingly looking for fast production and a highly flexible response to the most varied requirements.

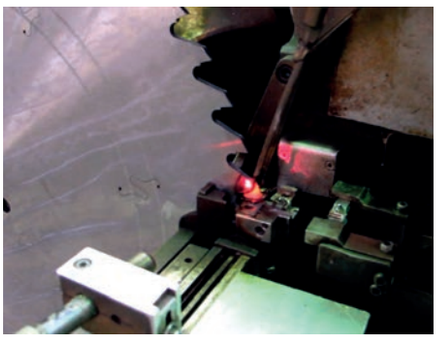
We offer our customers fast and accurate service, speeding up and simplifying delivery, making our customers more and more satisfied every day, not only with our products but also with the service we provide.











OUR QUALITY AND INNOVATION

We want our company to become a benchmark in our industry. That is why we have made a constant commitment to innovative investments one of the points of our corporate mission. Because we believe that change is necessary to grow and position the company among the market leaders. Our achievment Future Market Inside (FMI) ranked SISTEMI Klein® among the world's leading manufacturers of wood router bits.

■ OUR PHILOSOPHY

At Sistemi, we are customer oriented, we aim for customer satisfaction by carefully examining each stage of the production process and carefully selecting the raw materials that are essential for quality production. Our mission is to bring a valuable product to the market that fully meets your requirements. A high-performance and excellent product that is able to withstand prolonged use, hits and heavy pressure. Our items are made only of the best raw materials and by skilful and experienced people.

■ MADE IN ITALY BY SISTEMI KLEIN®

Quality and 'Made in Italy' are our cornerstones. We are promoters of Italian products throughout the world, and we constantly invest in high quality raw materials and modern machines and cutting-edge production processes. The concept of 'Made in Italy' is recognised all over the world for its study, dedication, technological innovation and the quality that derives from it, elements that we, at Sistemi, place in the manufacture of every single product. We are scrupulous in our choice of high-level product components to create high-performance finished products that do not disappoint our customers' expectations. In addition, we also pay attention to the quality of the tools and we use only presetters and automatic process to check the quality of the final products, because a top-quality collet chuck, sawblade, drill bitts and router bits is only such if valuable and innovative equipment is used in the production process.

■ INNOVATION AND MODERNITY

This cannot be possible without the right investments in innovation. Indeed, company and production renewal needs to be carried out periodically in order to adapt the company to the innovations that the market demands. We at Sistemi are constantly investing in the most cutting-edge technology in our industry, so that we can always offer you the best product. Innovation is the key that will project our company into the future and open the doors to new markets and scenarios.

OUR GREEN POLICY

Here at Sistemi, we care about the health and welfare of the planet, and we have been using only recyclable materials for packaging marked with the logo already since some years now. Furthermore, as waste management has increasingly become a problem of global importance, we strive every day to separate waste in order to limit its entry into landfills.

■ PLASTIC

Many types of plastics can be easily recycled, so we have decided that all packaging made of plastic material should be 100% recyclable and identified by the Unicode code, which covers the number identification of recyclable plastics.

■ PAPER AND CARDBOARD

All our packaging using paper and cardboard is Resy branded, which indicates the raw material, paper and cardboard that are 100% recycled and recyclable. In addition, printing our User Manuals, product brochures and price lists in-house has helped us to reduce our consumption of paper for commercial purposes by around 50%.

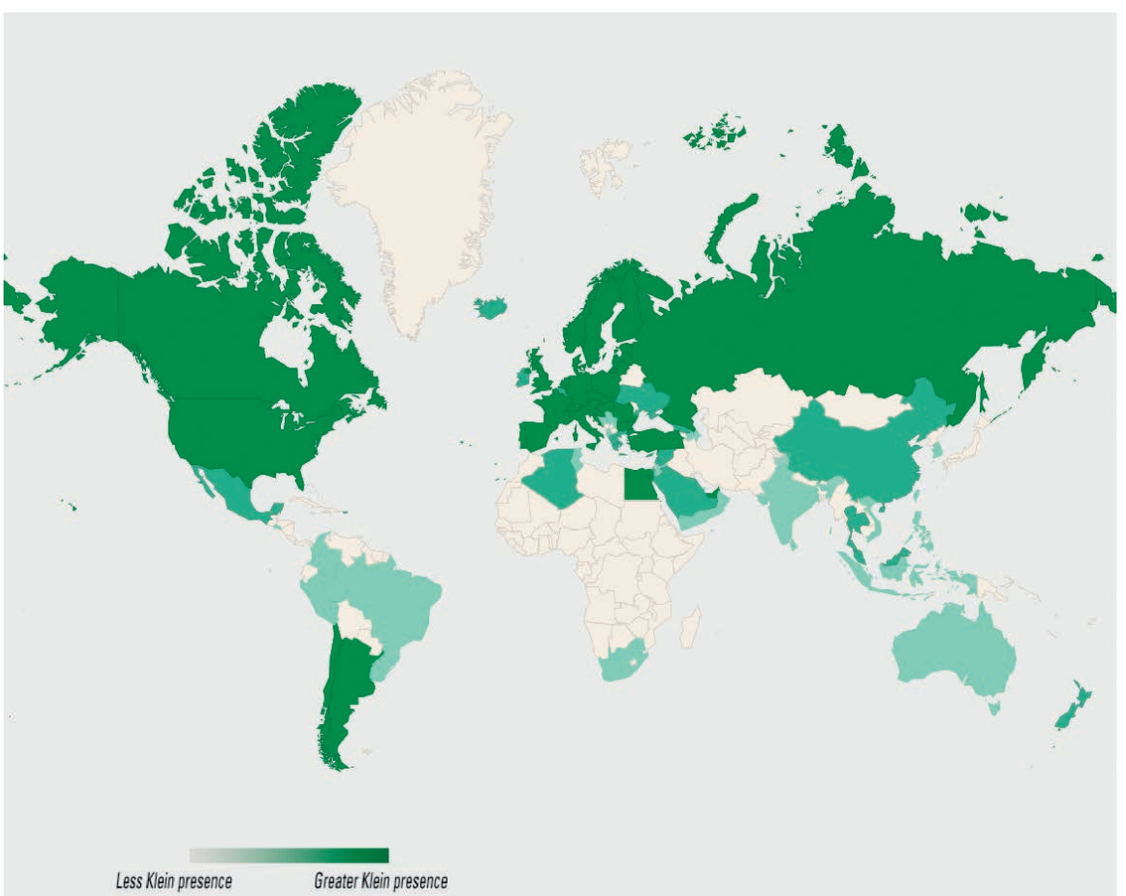
■ INKS AND GLUES

Everything that is printed for Sistemi uses vegetable oil-based inks and glues that fully meet the company's ecological goal of reducing VOCs (Volatile Organic Compounds) and making printed products easier to recycle.

■ SOLAR PANELS

Ensuring our children a greener future by focusing on renewable energy is what led us at Sistemi to choose a photovoltaic panel solar system. The project is part of the company's increasingly strong commitment to environmental protection and respect. The installation of the photovoltaic solar panels above the factory roof was inaugurated in January 2011 and is aimed at producing green energy for the Company. Thanks to this system, approximately 10,000 kg of CO2 emissions corresponding to 1,500 trees are saved each year.

OUR DISTRIBUTION



At Sistemi, we export our prodoct to more than 60 contries around the world.
We have developed a sales network in the main European Union, Asian and United States of America countries so that we cover the main international markets ready to satisfy every need and demand.

OUR ACHIEVEMENT

1987 — **SISTEMI SRL WAS FOUNDED**

1990 — Sistemi introduced the Electronic Bench for dimensional control of the panel

1991 — Sistemi introduced the Klein brand

1992 — First Xylexpo exhibition in Milan, where Arkade+ Zinkel was presented

1993 — Opening of representative office for the American market

1996 — Cooperation with m.conti: presets for tool control - new website

1997 — Sistemi completed its equipment for the Arkade+ Zinkel with the Ellix system

2000 — Sistemi moved to its current headquarters and added circular saw blades to its catalogue

2003 — New Trimatic Super line and the entire Catalogue was also made available online

2010 — Sistemi opened up to the Chinese market and the gauge line was expanded with radio frequency gauges

2014 — At the Xylexpo exhibition in Milan the new Catalogue 14.A was presented with Tornado®

2015 — The new version of the online Sistemi Klein® website was launched

2016 — Three new brands were introduced onto the market: KleinDIA® - XtraBore® HotBlock®

2020 — Future Market Inside (FMI) ranked SISTEMI Klein® among the world's leading manufacturers of wood router bits

2021 — Company expansion and new warehouse for storage to ensure faster shipments

2022 — ALUKlein® and realisation of the new corporate website

2023 — New WEBSITE

OUR BRANDS

SISTEMI

Since 1987, the story of SISTEMI begins in Pesaro in the Marche region, the land of furniture, kitchen and motors.

Klein

Sistemi introduced the Klein® brand, a trademark of SISTEMI

KleinDIA®

KleinDIA® is a DLC (Diamond-like Carbon) anti-friction coating which allows to solve problems of tool abrasion, chip evacuation and chemical attack.

ALUKlein

Full range of tools for the industrial processing of aluminium, PVC, plastic, advanced materials and wood

KleinItaly®

The Klein Italy brand was born from the need to distinguish Klein products in the foreign market as Made in Italy.

trimatic®

The Trimatic® product line was created in 1998 as the first and original drilling jig, to drill 3 or more holes at the same time with centre-to-centre distance suitable for mounting the most well-known hinges (Salice, Blum, Hettich, ...).

Tornado®

The first model of Tornado® was introduced in the market in March 2014 experiencing a great success among worker and machinery operators due to its great results.

HotBlock®

HotBlock® shrink-fit chucks in its catalog, together with the corresponding heat-shrinking machine (K.START.2) and cooling (K.FG.500) machines.

Xtra bore®

Following the 2016 catalog update, the new ExtraBore® coated solid carbid drill bits for automatic multiboring machines were added.

Xtra cut®

ExtraCut® is the next level of premium quality saw blades. Silents slots are filled with a special synthetic plastic resin placed for greater stability and reduced vibration.

CATALOGUE SECTIONS

The catalogue is divided into **16** sections of which the first **14 dedicated to tools, the n. 15 to measuring instruments and the n.16 to special equipment.**

d	Bore
A	Dimension A
B/l	Cutting length/throat reduction
C	Knife thickness
B/c	Teeth kerf/body thickness
V	Spurs
LP	Profilable length
Ch	Keyways

INDUSTRIAL ROUTER BITS FOR HAND PORTABLE ROUTER MACHINE AND ROUTER TABLE

STRAIGHT AND TRIMMING ROUTER BITS
Router bits specially designed to work at different cutting heights and diameters. In addition to the lateral cutting edges, many of them also have a third cutting edge at the head to perform drilling operations (Z=2+1).

See page 1.07-1.09 / 1.14-1.15 / 1.21

SLOT CUTTER AND ASSEMBLY ROUTER BITS
Router bits for all the types of jointing. The ball bearing guide defines the depth of the cut, ideal for grooves, frames, doors and edges.

See page 1.13-1.14

ROUTER BITS WITH INTERCHANGEABLE KNIVES
The interchangeable knife is easy to replace and provide an excellent precision and cutting accuracy with the best quality/price ratio. Longer tool life and better finishing quality.

See page 1.26-1.27

RADIUS AND PROFILE ROUTER BITS
All the router bits with a profile or shape on the cutting edge allow you to decorate the wood as you wish. Some of them have a ball bearing guide.

See page 1.15-1.21

ENGRAVING AND DECORATING ROUTER BITS
Router bits for all the types of jointing. Router bits with a special “V” or “U” head profile let you carve wood easily and precisely. These router bits areuseful for lettering, incision signmaking and decorations on wood.

See page 1.11-1.12

SPIRAL ROUTER BITS
The spiral solid carbide router bits have a special design, which guarantees an extremely precise and clean cut because the cutting edges facilitate the wood chips expulsion.

See page 1.09

ROUTER BITS FOR PORTABLE ROUTERS

The router bits KLEIN® are high quality products which can satisfy the most important applications required by the market today. In order to maintain the high quality level achieved during these years, our production departments have been continually equipped with latest technology and machinery along with more versatile and modern management systems. Moreover we always put a constant attention in the choice of raw materials, such as the development of a special TCT in collaboration with our suppliers, which allow our straight router bits KLEIN® to be at the top of the market for performance, precision and cutting life, ensuring excellent results and even better than our competitors'. An important aspect is also the wideness and variety of our range of router bits. In the catalogue KLEIN®, in fact, there are more than a thousand different items which meet any particular requirements, whether in the industrial or handcrafted manufacture.

ANTI-STICK INDUSTRIAL BURNISHED COATING which ensures protection against rust, corrosion and build-up

TRI-METAL BRAZING OPERATION (alloy+copper+alloy) for best performance and maximum resistance to stress

CERTIFIED INDUSTRIAL CARBIDE to guarantee longer lifetime, sharp cutting edge and best finishing

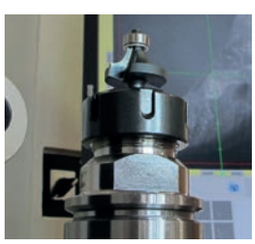
SHEAR-ANGLE especially designed to obtain smoother cuts compared to competitors

ANTI-KICKBACK DESIGN that reduces the problem of the initial kickback of the piece of wood, ensuring maximum safety

LASER MARKING as a guarantee of the operator, a number of specifications are marked on the cutter shank

QUALITY CONTROL

At Klein in order to best ensure the performance and sharpness of each product, we use both a manual and camera Presetter inspection process to minimize the margin of error and ensure technical specifications.



THE PACKAGING

Eco-friendly packaging with 100% recyclable plastic and paper. The internal card displays technical drawing, features and more

MAINTENANCE

A correct cutter care is essential in order to preserve cutter performance and prolong its life. Keeping in mind our advices will guarantee the maximum tool protection, increasing its productive efficiency. Read and download our guide online here

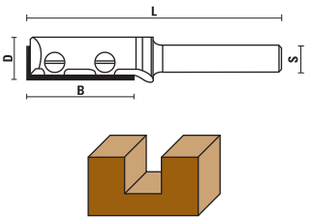
INSERT ROUTER BITS FOR PORTABLE ROUTERS

Always looking for innovative products and most useful solutions, **SISTEMI** has developed a new line of **Klein** router bits with interchangeable carbide knives, which have a higher hardness than the tips used in traditional brazed router bits. The main advantages granted by the use of HW reversible knives and the possibility of their easy replacement are:

- **Longer tool life**
- **Better finish quality**
- **Higher measures precision**
- **Better Quality/Price ratio**
- **Environmental friendly**

HW INSERT FLUSH TRIMMING BITS Z=1

ART. WC101



Complete with reversible knives

INDUSTRIAL ROUTER BITS FOR HAND PORTABLE ROUTER MACHINE AND ROUTER TABLE

STRAIGHT AND TRIMMING ROUTER BITS
Router bits specially designed to work at different cutting heights and diameters. In addition to the lateral cutting edges, many of them also have a third cutting edge at the head to perform drilling operations (Z=2+1).

See page 2.07-2.08 / 2.12 / 2.16

SLOT CUTTER AND ASSEMBLY ROUTER BITS
Router bits for all the types of jointing. The ball bearing guide defines the depth of the cut, ideal for grooves, frames, doors and edges.

See page 2.15 / 2.25-2.34

ROUTER BITS WITH INTERCHANGEABLE KNIVES
The interchangeable knife is easy to replace and provide an excellent precision and cutting accuracy with the best quality/price ratio. Longer tool life and better finishing quality.

See page 2.17-2.18

RADIUS AND PROFILE ROUTER BITS
All the router bits with a profile or shape on the cutting edge allow you to decorate the wood as you wish. Some of them have a ball bearing guide.

See page 2.09-2.14 / 2.18-2.24

ENGRAVING AND DECORATING ROUTER BITS
Router bits for all the types of jointing. Router bits with a special "V" or "U" head profile let you carve wood easily and precisely. These router bits areuseful for lettering, incision signmaking and decorations on wood.

See page 2.09

SPIRAL ROUTER BITS
The spiral solid carbide router bits have a special design, which guarantees an extremely precise and clean cut because the cutting edges facilitate the wood chips expulsion.

See page 2.16 or go to section 7

ROUTER BITS FOR WORKING SOLID SURFACE MATERIALS

HW router bits for working solid surface are manufactured by Sistemi Klein® with high quality raw materials, softer cutting angles and the use of carefully selected Delrin bearings to allow safe and optimal processing of solid surfaces and to decorate Corian®, Avonite®, Hanex® and more. Nowadays, working and routing "Solid Surface" material is more and more common. Solid Surface such as Corian®, Avonite®, Hanex®... are largely used in many different fields, both domestic (bathrooms, kitchens and labs) and health (hospital and clinics). It is a useful, versatile and easy to clean product. All the Klein router bits for working solid surface are developed and made with a special solid carbide for cutting these sturdy materials. The soft form of our cutting angles and the Delrin® ball bearings, allow safe and easy operations.

DRILLING

The experience of **SISTEMI** is being always available to its customers in choosing the right tool for the desired processing.
In this regard, a wide range of factors must be taken into consideration. Here is a summary list:

1) In addition to the traditional drilling bits with brazed carbide tips sometimes it is important to evaluate the use of **solid carbide drills** (Art. L116/L117/L118/L129/L134/L135) **that can ensure performance benefits,** longer life, higher number of resharpening times and higher resistance to breakage of tool body;
2) Choosing the drill bit according to the working material by properly setting RPM and feed speed as indicated in the following tables help to optimize the process;
3) To reduce the time of assembly and align the drills, **we recommend using our quick change drill chucks** (Art. L030 ÷ L060);
4) **Regular cleaning and maintenance** of the drills and adaptors **improve the performance and life of tools**, reducing the risk of breakage and increasing the quality of the worked pieces;
5) To improve the chips flow, the boring bits are coated with a **PTFE-based heat treatment** (Polytetrafluoroethylene) in black for Right Rotation and orange for Left Rotation.

THE NEW COATED BITS FOR LARGE SCALE INDUSTRY

Xtra bore

- DLC DIAMOND ANTIFRICTION COATING
- LONGER TOOL LIFE
- EXCELLENT PERFORMANCE ON EVERY KIND OF MATERIAL
- GREATER PRODUCTIVITY

How to choose the right Boring Bits

Types of material / Items	Softwood (Cider, Poplar, Pine, etc.)	Hardwood (Ash, Walnut, Beech, Oak, Teak, etc.)	Pressed Wood (Plywood, Blockboard)	Chipboard	Laminated Wood (Veneered, melamine coated panels, HPL, etc.)	MDF	Trespa®

SPURS GEOMETRY OF THE DOWEL DRILLS

STANDARD
ART. L101 ÷ L110

Front Side

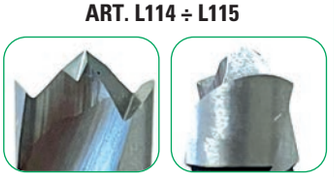
- Good finish
- Average lifetime
- Tungsten Carbide Tipped
- P.T.F.E. coating
- Lower price
- For hard and soft wood, chipboard, laminated and MDF

EXTRA FINE
ART. L112 ÷ L113

Front Side

- Rounded and reinforced spurs with center point
- Good finish
- Good lifetime
- Tungsten Carbide Tipped
- P.T.F.E. coating
- Medium price
- For hard and soft wood, chipboard, laminated and MDF

EXTRA TIME
ART. L114 ÷ L115



Front Side

- Rounded and reinforced spurs with center point
- Great finish without chipping
- Very Good lifetime
- Tungsten Carbide Tipped
- P.T.F.E. coating - Medium price
- For hard and soft wood, chipboard, laminated and MDF
- Suitable also for Trespa and abrasive material

EXTRA TIME solid carbide
ART. L116 ÷ L117

Front Side

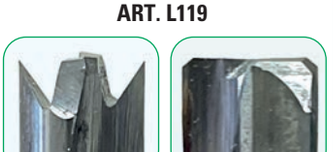
- Rounded and reinforced spurs with center point
- Excellent finish without chipping
- Superior lifetime
- Solid carbide/Mirror finish
- Medium/high price
- For hard and soft wood, chipboard, laminated and MDF
- Suitable also for Trespa and abrasive material

EXTRA BORE
ART. L116KD ÷ L117KD

Front Side

- Rounded and reinforced spurs with center point
- Excellent finish without chipping
- Premium lifetime (up to 4X times)
- Solid carbide/Mirror finish
- KleinDIA coating - High price
- For hard and soft wood, chipboard, laminated and MDF
- Suitable also for Trespa and abrasive material

FLAT BITS
ART. L119



Front Side

- Rounded spurs and flat center point
- Excellent finish without chipping
- Superior lifetime
- Solid carbide/Mirror finish
- Medium/high price
- For low thickness panels of hard and soft wood, chipboard, laminated and MDF

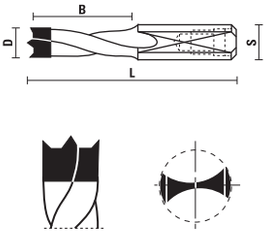
PKD
ART. X530 ÷ X531

Front Side

- Negative spurs and flat center point
- Good finish without chipping
- Excellent lifetime (up to 40X times)
- Nickel coating against corrosion
- Higher price
- For very abrasive material and large scale industrial production

HW DOWEL DRILLS EXTRA FINE Z=2

ART. L112 - L113



- **EXTRA FINE GRINDING TOOL**
- **2-flutes**
- **Rounded spurs and special HW for a better finish and longer lasting tool performance**
- PTFE-Based coating for a better chip flow
- For natural wood, pressed wood, veenered, chipboard, laminated and MDF

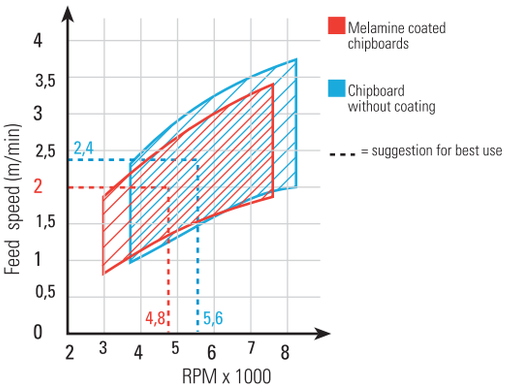
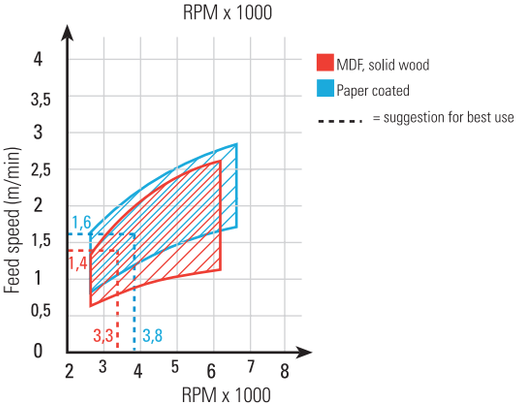
HW AND SOLID CARBIDE DOWEL DRILLS (art. L112 - L113)

How to determine the feeding speed according to the machine (RPM):

- Referred to a standard common diameter



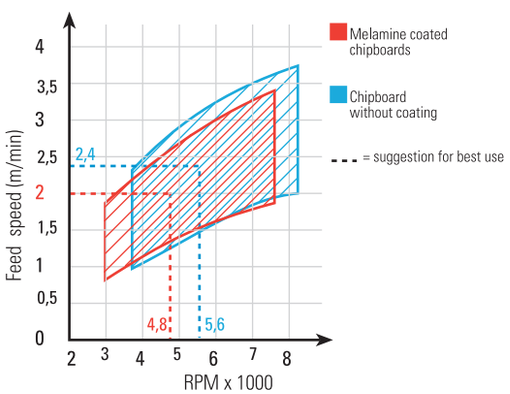


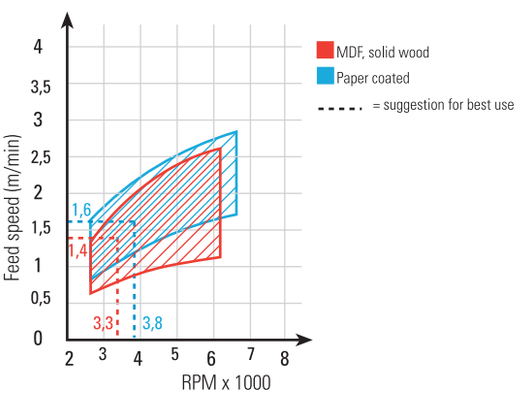
- High performance drills thanks to the special spur geometry;
- Suitable for working all materials with very good result;
- Suitable to work at higher feed speed and RPM.

HW AND SOLID CARBIDE DOWEL DRILLS (art. L114 - L115 - L116 - L117)

How to determine the feeding speed according to the machine (RPM):

- Referred to a standard common diameter

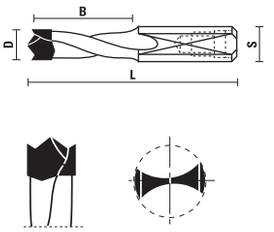




- Special spur geometry with reinforced centre point for excellent performance
- Recommended also for working problematic materials, like panels coated with paper
- Suitable to work at higher feed speed and RPM

HW DOWEL DRILLS EXTRA TIME Z=2

ART. L114 - L115



- **EXTRA TIME GRINDING TOOL**
- **2-flutes**
- **Rounded spurs and reinforced centre point**
- **Special HW**
- **Excellent finish and longer tool life**
- PTFE-Based coating for a better chip flow
- For natural wood, pressed wood, veenered, chipboard, laminated and MDF
- Suggested also for working trespa and melamine panels

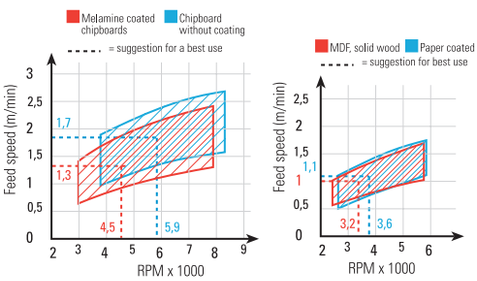
HW THROUGH HOLE DOWEL DRILLS WITH 2 AND 4 FLUTES

(from art. L121 to L127)

How to determine the feeding speed according to the machine (RPM):

- Referred to a standard common diameter



- Finish quality will be improved reducing the feed before the drill exit from the panel bottom side
- The solid carbide drills art. L129 allow the same results at higher feed speed and RPM

GRINDING GEOMETRY OF THE THROUGH HOLE DRILL BITS

STANDARD
ART. L123 ÷ L127

- 60° drill point
- Good finish and average lifetime
- Tungsten Carbide Tipped with P.T.F.E. coating
- Lower price
- For hard and soft wood, chipboard, laminated and MDF

STANDARD
solid carbide
ART. L129

- 60° drill point
- Good finish and great lifetime
- Solid Carbide & Mirror finish
- Medium/High price
- For hard and soft wood, chipboard, laminated and MDF
- Suitable also for Trespa and abrasive material

EXTRA TIME
ART. L132 - L133

- Double angle grinding geometry
- Great performance and very good lifetime
- Tungsten Carbide Tipped with P.T.F.E. coating
- Medium price
- For hard and soft wood, chipboard, laminated and MDF

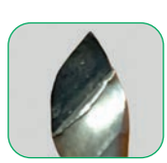
EXTRA TIME
solid carbide
ART. L134 - L135

- Double angle grinding geometry
- Excellent performance and lifetime
- Solid Carbide & Mirror finish
- Medium/High price
- For hard and soft wood, chipboard, laminated and MDF
- Suitable also for Trespa and abrasive material

EXTRA BORE
ART. L134KD - L135KD

- Double angle grinding geometry
- Premium finish and lifetime (up to 4X times)
- Solid carbide with
- KleinDIA coating
- High price
- For hard and soft wood, chipboard, laminated and MDF
- Suitable also for Trespa and abrasive material

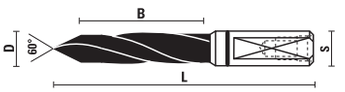
DP (PCD)
ART. X532 - X533



- Double angle grinding geometry
- Good finish and excellent lifetime (up to 40X times)
- Nickel coating against corrosion
- Higher price
- For very abrasive material and large scale industrial production

VHW THROUGH HOLE DRILL BITS Z=2

ART. L129



- **Solid carbide spiral portion** (with 2-flutes)
- For natural wood, pressed wood, veenered, chipboard, laminated and MDF
- Made with an exclusive carbide and a **mirror finish quality.**
  This process will reduce the friction and produce clean and smooth cuts with longer tool life and better performances.
- Best choice when working panels with special coating

ADJUSTABLE COUNTERSINK SET

Thanks to our new solution, it is now possible to adjust drilling depth and make seats for flush screws in an easy and quick manner, simply by using a power portable drill. You can find below the directions of use for the two different solutions both with cylindrical and hex shank. It is very important to drill a pilot hole before inserting the screw, in order to obtain excellent results, both aesthetic and long-lasting performance.

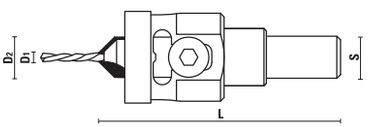
ADJUSTABLE COUNTERSINK SET

ART. R156



- Sold complete with HS drill bit (art R210)
- Depth stopper made in metal alloy **with ball bearing inside for no-friction operations**
- Great chip evacuation thanks to two lateral openings
- No risk of markings and scratches
- Easy adjustment of countersink and drilling depth
- Complete with adjusting screw

TOOL HOLDERS

THE HOLLOW TAPER SHANK IS PRODUCED ACCORDING TO DIN69893, ISO OR JIS STANDARDS WITH ACCURACY OF HSK-F SHANKS LOWER THAN A72

A DEDICATED POCKET INSIDE THE TAPER TO INSTALL BALLUFF/RFID CHIP

MAXIMUM ERROR OF CONCENTRICITY BETWEEN THE CONICAL PART AND THE TOOL'S SEAT OF 0.003 MM (RUNOUT: 0.0001")

TO ACHIEVE THE MAXIMUM LEVEL OF PRECISION, ALL OUR TOOL HOLDERS ARE MANUFACTURED BY HARD TURNING MACHINE AND THEN ALL THOROUGHLY PRECISION GROUNDED BOTH ON SHANK, OUTSIDE PART OF TAPER AND COLLET NUT THREADS

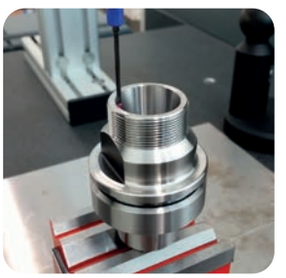
THE SPECIAL STEEL USED TO PRODUCE OUR TOOL HOLDERS HAVE A HARDNESS OF 58+2 HRC ON THE ROCKWELL HARDNESS SCALE WITH A DEPTH OF 0.8/1 MM

ALL OUR TOOL HOLDERS ARE LASER MARKED FOLLOWING EUROPEAN SAFETY REGULATIONS

THE BALL BEARING CLAMPING NUT IMPROVES THE CLAMPING PRECISION THANKS TO A HOMOGENEOUS CLAMPING FORCE. IT CAN BE USED BOTH FOR THE RIGHT-HAND AND LEFT-HAND ROTATION

QUALITY CONTROL

SISTEMI has always been known for the high quality of the products offered.
Keywords of this success are the **attention to production materials** and the use of the most modern construction techniques together with more accurate controls and the continuous research of innovative products.
Each toolholder is supplied packed in a carton box with internal sheet of guarantee inside.



MAINTENANCE

A regular and **proper cleaning** of mechanical components is critical to avoid jamming during processing operations and the consequent risk of a poor finishing of the piece or even tool breakage. The worked pieces leave impurities and debris in the collets holes, in the seats of tool holders or electrospindles. These should be therefore cleaned daily using the **right wipers** (see items T137 and X137 at page 7.40)

USEFUL INFORMATION

1) The collect chuck may be used only on router machines and machining centers for processing wood and wood-based material with comparable cutting characteristics.

2) The instructions of the machine manufacturer regarding the suitability of the clamping device have to be observed.

3) The direction of rotation marked on the clamping device has to be observed and followed. The direction of rotation of the tool and the collet chuck has to be the same.

4) Do not exceed the maximum RPM “n max“ marked on the collet chuck. The maximum RPM of the system is determined by the tool, if the RPM of the tool is lower than that of the chuck.

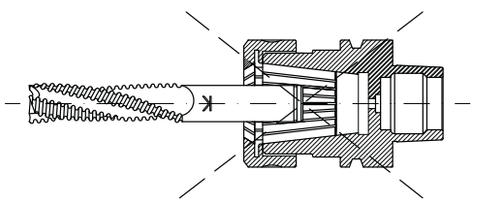
SAFETY NORMS

Table 1.1:
Calculation **of the minimum clamping length** (Safety regulation EN847-1).

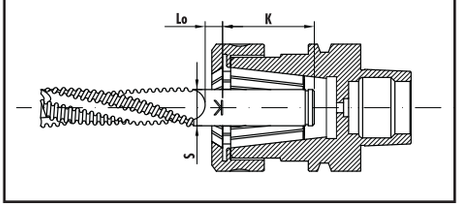
On the tool shank the minimum clamping length is marked.
The shank has to be clamped as far as possible, but at least up to the marking of the minimum clamping length (K).
The free shank length (Lo) should be as short as possible, granting a higher rigidity and smaller risk of tool breakage.

Shank diameter **S** (mm)	Min. clamping length K (mm)
S ≤ 10	K ≥ 20
10 < **S** < 25	K = S x 2
S ≥ 25	K = S x 1,8

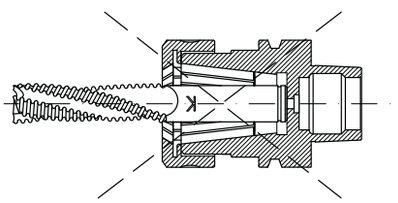
WRONG ASSEMBLING



OPTIMIZED CLAMPING LENGTH



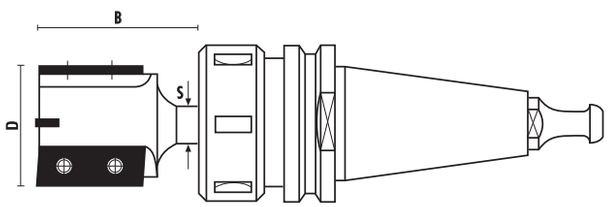
WRONG ASSEMBLING



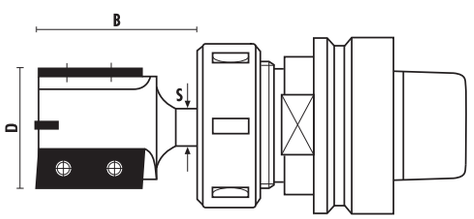
Safety norm for the calculation of the minimum clamping length

D = Tool diameter
B = Maximun safe length of the tool
S = Shank diameter

COLLET CHUCKS ISO30



COLLET CHUCKS HSK63F



In order to avoid the risk of tool breakage during the job, make sure you answered the following questions:

1- Are you using the proper tool for the desired job?
2- Collets and tool holders are clean and the tool is inserted properly?
3- RPM and feed speed are correct?
4- Is the depth cut not too excessive for the material processed?
5- Are there any evident vibrations of the mechanical parts?
6- No right answer to your problem?
Stop running parts and check with your "Klein" distributor.

If you have to contact your distributor of technical support, please have ready the following information:

a- Type of machine being used
b- Type of material being cut
c- Part number of tool, "Klein" item
d- RPM/feed speed/depth of cut
e- How long did the tool worked before it broke/damaged?
f- Have you already done this operation in the past using the same tool?

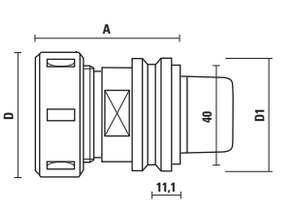
COLLET CHUCKS HSK-50E WITH FLANGE ∅ 40

ART. T118



- The hollow taper shank is produced according to DIN69893
- Supplied with nut (without collet)
- Threaded nut and wrenches see page 7.33, spring collets see page 7.27
- Threaded nut DIN 6388 (EOC25)
- The "A" measure will be determined with clamped tool shanks by using our spring collet DIN 6388 (EOC25). The "A" measure may be subject to variations depending on the diameter of the clamped tools

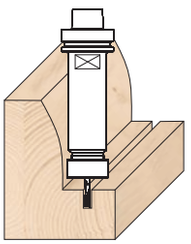
LONGER COLLET CHUCKS HSK-63F FOR HIGH SPEED PRODUCTION WITH LOW NOISE KleinOVERLINE

The increasing use of 5-axis machines has enabled to step up the possible workings and with it the need to perform operations in tight and hard to reach spaces.
In order to meet these needs with the **utmost precision and excellent finishes** we offer a range of special HSK63F tool holders for collets **ER16**, **ER32** and **DIN6388/EOC25**, balanced at grade **G 2.5 at 36,000 RPM**.



Main features KleinOVERLINE

- **Accessibility**
- **Balance**
- **-Rotation speed**
- **Noiselessness**
- **Extended length tool holders, reaching 200 mm.**
- **G 2.5 balancing grade**
- **36.000 RPM**
- **No-noise nuts, with ground contours**

COLLET CHUCKS HSK-63F ER16 - G2.5 BALANCING

RPM 36.000 | T139.163.N | BALLUFF POCKET

- The hollow taper shank is produced according to DIN69893
- **Balanced at grade G 2.5 to 36.000 RPM**
- **Noise and vibrations reduction thanks to the special nut without cuts**
- Supplied with nut (without collet)
- Threaded nut and wrenches see page 7.33, spring collets see page 7.29
- Threaded nut DIN 6499
- The "A" measure will be determined with clamped tool shanks by using our spring collet DIN6499. The "A" measure may be subject to variations depending on the diameter of the clamped tools.

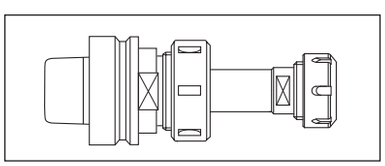
Example of use:



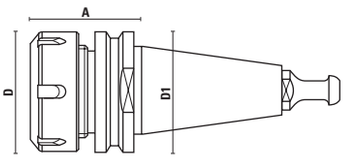
- For a proper use and maximum holding power, fill the collet all the way with the extension shank;
- It is very important to tighten the collet nut of tool holder to recommended torque using a torque wrench;
- When the extension is mounted, balancing grade is not guaranteed.

STAINLESS STEEL COLLET CHUCKS

- Solid stainless steel collet chucks are more resistant and have a longer life span;
- A special treatment guarantees an excellent resistance to corrosion and an aesthetic pleasing;
- No problems of peeling compared to coated chrome chucks of our competitors;
- Better working performances and longer life of the electrospindles;
- Produced in stainless steel AISI 420;
- Needed when working with coolant: machines for marble, glass, aluminium working and others;
- Highly recommended when processing resinoid wood and composite materials;
- Suggested when working in "humid" environment;
- Extremely low maintenance costs, easy to clean.

COLLET CHUCKS ISO 30 INOX

ART. T118



- The hollow taper shank is produced according to DIN69893
- The "A" measure will be determined with clamped tool shanks by using our spring collet DIN6499. The "A" measure may be subject to variations depending on the diameter of the clamped tools.

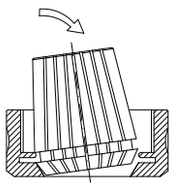
SPRING COLLETS

Our **HIGH-PRECISION spring collets** are produced in Italy and have 0,01 mm precision (0.0004" TIR) with perfect precision and reliability, ensuring longer tool life of the spindle and better working operations. They are fully grounded both externally and internally; after this operation there is a second phase of finishing which aims to eliminate all ridges and burrs from machining by obtaining a surface "superfinish" by ensuring a grade of roughness lower than Rz 2,5. They are completely quenched and tempered (HRC 45+2).
Our line of **ULTRA-PRECISE spring collets** are produced to give to the tool holders and spindle the maximum efficiency based on the balancing grade. They are made in special spring steel with a concentricity specification of 0,005 mm (0.0002'' TIR).

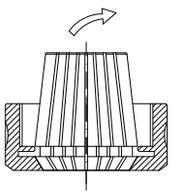
MADE IN ITALY

HOW TO INSERT THE SPRING COLLET IN THE NUT



Right procedure to assemble the collet in the nut:
- place the collet diagonal to the clamping nut and lock it from the side by pressing it from top
- screw the nut and be sure the shank is correctly inserted in the spring collet.

Tighten the nut using the apposite key on the proper demount device (Art. T139, see page 7.41)
Do not place the spring collet in the collet chuck before you have it properly inserted in the nut.



Correct procedure for tool and spring collet change:
- place the collet chuck in the mounting device
- untighten the clamping nut
- open the clamping nut and pull the cutting tool out holding it on the shank
- release the collet from the clamping nut by lateral pressure

CONCENTRICITY

Using high precision spring collets, vibrations on the tools and motors are reduced, assuring better results and a longer life of the tools and electrospindles.

COLLET LIFE SPAN

Spring collets have a life span of approximately 3 months if used 8 hours a day.
Replacing the collets will ensure your operation runs consistency and prevents from tool breakag.

MAINTENANCE

Keeping spring collets and tools clean is essential for a longer life. The worked material produces chips and dirt which can cause an elliptical tool rotation. The seats of collet chucks and electrospindles should be cleaned daily with the correct tapers (see our items **T137** and **X137** at the page 7.40).

DID YOU KNOW?

Collets are manufactured from spring steel and regular usage causes a loss of elasticity. Therefore, collets need to be replaced regularly as part of on-going maintenance while the average collet should be replaced every 500-600 hours of run time. Avoiding regular replacement can lead to brittle collets, which may crack or break, and cause permanent damage to the spindle. Replacement of collets is more economical than replacing router bits or expensive spindles. Rigidity and concentricity are the key elements in any routing application. Periodically, tool holders should be examined for wear and if necessary replaced to maintain great cutting performance. The simple process of colleting router tools, maintaining collets, and regularly replacing them - safeguards productivity and ensures a perfect finish.

SPRING COLLET SET + WIPE OFF KIT

The **wipe off set** allows maintaining the inside as well as the seat of the spring collet on the chuck clean, helps increasing cutting efficiency and reduce vibrations for a longer tool life. No more risk of wrong positioning of both the collet and the tool due to chips and resin.

- In plastic box

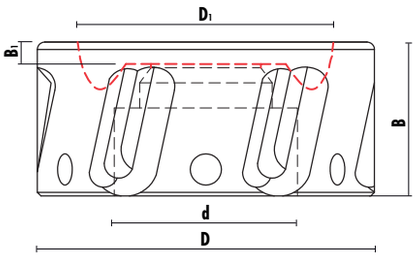
DUST & CHIP EXTRACTION NUT

ART. T139

Tornado®



- **Tool body in light alloy with a special surface coating against wear and corrosion for a maximum chips evacuation**
- Optimal gap between Tornado® and material is 2 mm (0.078"). It works properly up to 10 mm (0.38")
- Smaller diameter: (92 mm) in order to be mounted on every CNC router/machining centre
- **Suitable for every type of collet chuck** (HSK, ISO, BT, ...)
- Maximum speed rotation at 20.000 RPM
- Balanced at G2,5, weight 0,256 kg

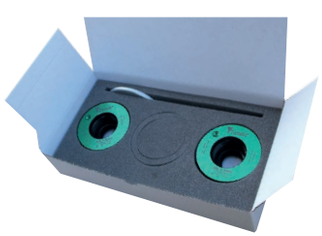
Tornado: the new dust & chips extraction nut helps both dust and chip evacuation during Nesting and conventional CNC Routing operations. Easy to assemble directly on the collet chuck instead of the standard nut, the new Klein Tornado ®provides a big improvement of dust evacuation, removing it from the workpiece directly into the centralized extraction system of the CNC machines.

DUST & CHIP EXTRACTION NUT SET

ART. X139



- Complete with:
  n° 2 extraction nuts (ER32-ER40)
  n° 1 hook wrench 95/100

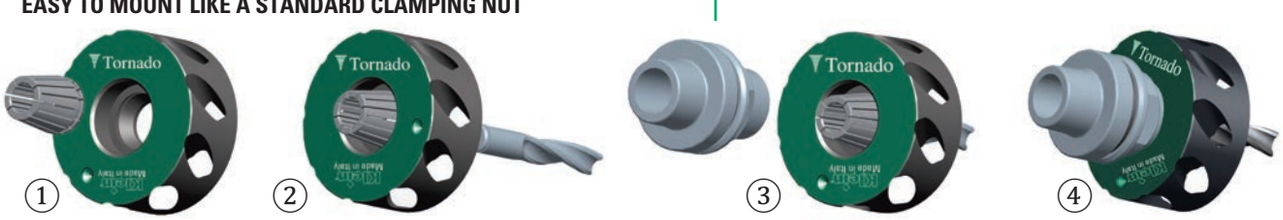
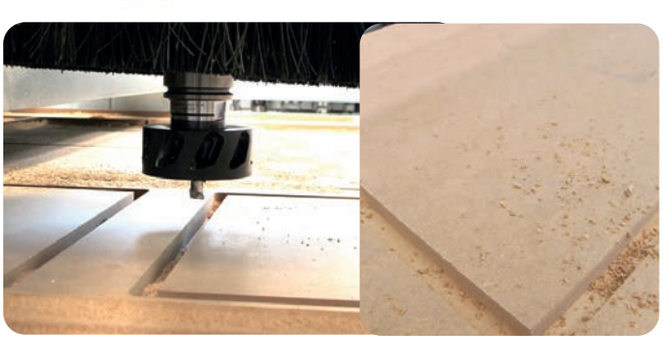
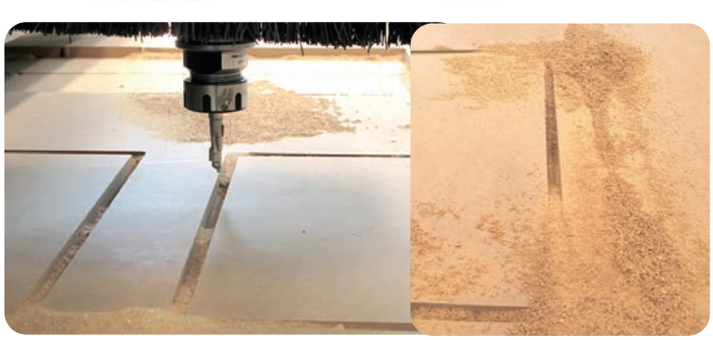
EASY TO MOUNT LIKE A STANDARD CLAMPING NUT





WORKING WITH TORNADO



WORKING WITHOUT TORNADO

TORQUE WRENCHES

While setting a tool it is extremely important to tighten it appropriately. **If not effectively tight indeed a cutting tool could slide away from the tool holder during the working process. On the other side, an excessive tightening can cause damages to the tool holder or spring collet or the tool itself.** The wrench indicates when the torque (Nm) is reached according to the value in the corresponding table.

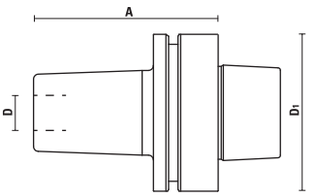
HOTBLOCK®

the new thermal shrink collet chucks are high precision collet chuck which ensure more precision having less coupling thanks to its special tight on the shank tool by thermal clamping. First, the collet tip is heated with a special heater unit, causing it to expand. The cutter shank is then inserted, and the collet is cooled to ambient temperature. This causes the collet to contract precisely around the cutter shank with a special eccentricity less than 3 micron, therefore the highest precision and stability for high performance and longer tool life.

SHRINK FIT CHUCKS HSK-63F

ART. T120

HotBlock®



- The hollow taper shank is produced according to DIN69893
- **Concentricity ≤ 0,003 mm**
- **High precision** tool holders guaranteed by thermally induced shrink fit
- High rigidity and balance for heavy CNC working
- For HS and HW cutting tool
- **Balanced to 24.000 RPM at G 2,5**
- **Right and left-hand rotation**
- Cutting tool shank must have tolerance h6 with cylindrical shank (no flats)
- Sold complete with certificate of balancing

SHRINK FIT UNIT

ART. K.START.2

- **Heating time from 2 to 7 seconds**
- Provided with inductor stop rings (6 to 12) + (14 to 20) and chuck holder for HSK63F
- Heating located on the tool holder, no deterioration of the tool and tool holder
- **Self-regulated power** thanks to a microprocessor depending on parameters detected
- **Inductor rotates 180°** without disassembling
- Power supply 3x380/480V – 16A 50/60 Hz -14 kW
- Dimensions: L= 255 mm - D= 490 mm - H= 755 mm
- Weight (options excluded) 20 kgs

See this product at Section 16, page 16.18.

Item
K.START.2

COOLING UNIT WITH AIR FLOW

ART. K.FG500

- Air cooling unit for shrink fit chucks
- **Cooling time from 1,30 minute to 3 minutes**
- Provided with cooling stop rings (6 to 12) + (14 to 20) and chuck holder for HSK63F
- Compressed air supply: 4-6 bars
- Dimensions: L= 220 mm - D= 190 mm - H= 615 mm
- Weight: 5 kgs

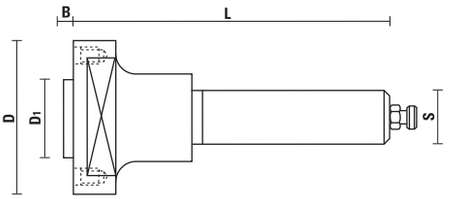
See this product at Section 16, page 16.18.

Item
K.FG500

NB: This items cannot be sold in Germany due to commercial agreements between the producer (Elco) and their autorised dealers in these markets.

ADAPTERS FOR CIRCULAR SAWBLADES

ART. T128



- Nr. 4 pin holes with M6/90°
- Complete with nr. 4 screws to fix the sawblade
- Recommended to use sawblades with diameters between 150 and 200 mm
- Item T128.143.R (S=16) is especially made to be mounted on aggregate heads

ART. Z092

- To be used with our adapters, see items T128.160/165.R - T128.170/175.R
- **Security flange improves stability and reduces vibrations when precision cuts are needed**
- Complete with nr. 6 screws for the proper assembly of the sawblades with 60° at 90 mm distance
- **Maximum sawblades diameter of 400 mm**

ATTENTION:
Replace the adapters screws with those provided with the security flange.

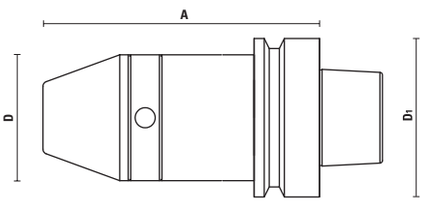
HSK-63F DRILL CHUCK FOR CNC

ART. T118

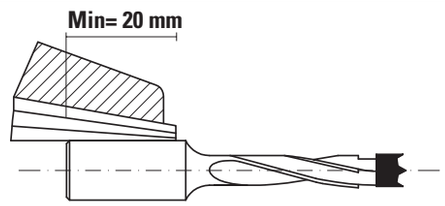


- The hollow taper shank is produced according to DIN69893
- For CNC drilling operation
- The special one-piece design guarantees best precision and greater rigidity
- Supplied with key
- Concentricity < 0,02 mm
- **Capacity from 1 mm (1/16") to 13 mm (1/2")**

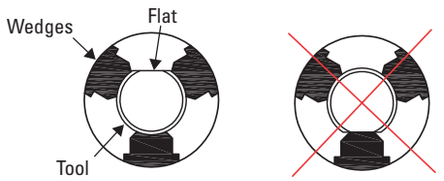
BALLUFF POCKET

Item	Taper	A	D	D_1	Capacity	Rot.
T118.915.N	HSK-63F	110	50	63	1-13 mm	RH/LH

HOW TO CLAMP THE TOOL



- Do not clamp tapered shanks
- Minimum clamping length is 20 mm and maximum is 29 mm
- Use feed and RPM suitable for drilling

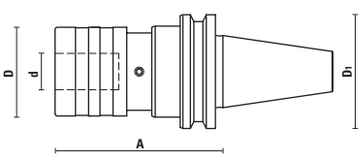


- If possible use cylindrical shanks
- If you use shank with flat, the clamping wedges are not allowed to touch the flat (see drawing)

How to clamp the tool with key

QUICK CHANGE ISO 30 TAPPING CHUCK

ART. UT118



- For making threads in aluminium machining
- With **axial compensation**
- To be used with bushes for tapping with outer diameter D=19 mm DIN 352, DIN 371, DIN 376
- **Supplied without pull stud**
- For tapping operation on CNC machines

Item	Taper	A	d	D	D_1

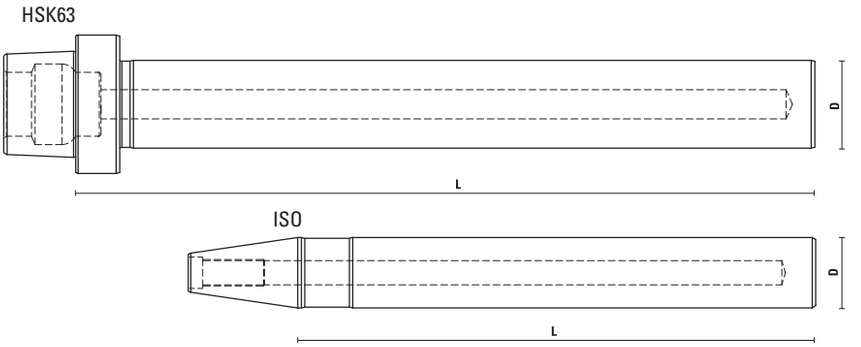
PRECISION TEST BARS

ART. T501



- **Maximum runout error 0,003 mm/3 micron/0.0001 inch**
- With cerficate of calibration included
- Comes with sturdy wooden case to protect

Item	Taper	D	L
T501.080.N	ISO30	32	235
T501.090.N	HSK63F	40	335
T501.095.N	HSK63E	40	335

WHY USE THE PRECISION TEST BARS?

- Produced with accurate quality control system
- **Allows to inspect the electrospindle with extreme precision and identify any problems**
- **It is possible to check both concentricity, parallelism and alignments of the spindle of your CNC machine**
- Thanks to a regular use of our test bars, machine anomalies can be found with no risk of compromising the spindle, avoiding costly down time
- Especially lightened internally for greater efficiency.

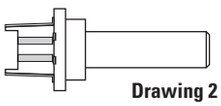
MACHINES AND TOOLS MAINTENANCE:

Clean collets and tool holders regularly before inserting the cutting tool. Regular cleaning increases the operation safety and ensures great performance. We recommend a regular preventive maintenance of the spindle mouth, collet pocket and spring collets using the right wipers and brushes thanks to our item X137. In order to prevent the formation of corrosion and rust, tool holders and spring collets have to be treated with a protective lubricant before storing them (see our item KleinPROTECT). Any dirt, dust, oil or other contaminant left on the spindle, taper, flange or collet can cause poor TIR (runout) and premature wear. It is necessary to protect your investments in machines with a regular cleaning.

SPINDLE WIPERS

ART. T137

Drawing 1



Drawing 2

- To maintain the inside of the spindle mouth clean
- Ensures extreme cleanliness of tapered spindles and it maintains the precision and prolongs the life of your expensive machines, cutting tools and toolholders
- To **avoid wrong positioning of the holders and ensure best contact between tool and tool holder for a better coupling**
- Suitable for all tool holder types
- A **proper maintenance** of the collet and the spindle with Klein® products will allow your tooling to live longer with better performance

WIPE OFF KIT FOR CNC

ART. X137

- For a perfect maintenance of your CNC router or machining centres
- For cleaning boring machines and CNC router machines. Ensures **extreme cleanliness of tapered spindles and it maintains the precision and prolongs the life of your expensive machines, cutting tools and toolholders**
- Carton box
- Available for every tool holders cone and spring collets
- A complete set with:
  • Spindle wipers for every kind of tool holder (Item T137);
  • Collet wiper to avoid wrong positioning of the collet (Item T137);
  • N° 4 brushes for collet bore (Item X137)

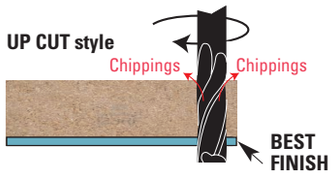
SOLID CARBIDE ROUTER BITS

Klein offers a very wide range of solid carbide router bits which can satisfy almost all the request of the market of CNC router machine.

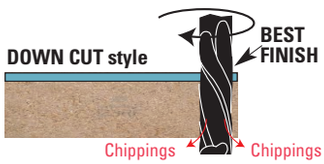
HW SOLID CARBIDE SPIRAL CUTTER FOR PORTABLE AND CNC ROUTERS

Standard
HW straight bits

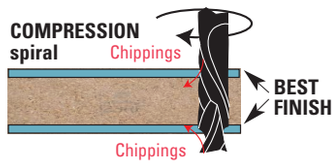
Up cut spirals for an excellent finish on the bottom side of the panel pushing wood chips upward.



Down cut spirals for an excellent finish on the top side of the panel pushing wood chips downward



Compression spirals for an excellent finish on both sides of the panels, especially on laminates and double-sided melamine (UP & DOWN).

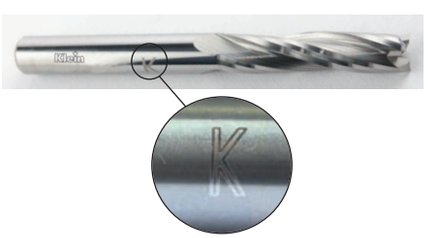


NUMBER OF TEETH:

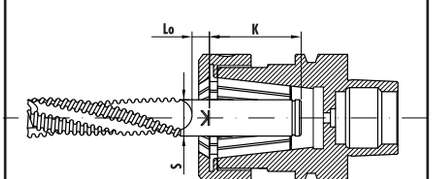
Z=1: allow heavy duties on soft materials and an excellent chip evacuation
Z=2: allow a better finish on hard materials and a good chip evacuation
Z=3: allow an excellent finish on all types of materials
Z=2/Z=3 with chipbreaker: ideal for heavy duties
Z=3: with semi finishing chip-braker execution

N.B.:
Increasing the number of teeth should increase also the feed speed in order to preserve the tool from burning or early wearing out.

Minimum clamping tool length	
Shank diameter **S** (mm)	Minimum length ⟩I⟨ (mm)
S ≤ 10	⟩I⟨ ≥ 20
10 < **S** < 25	⟩I⟨ = **S** x 2
S ≥ 25	⟩I⟨ = **S** x 1,8



OPTIMIZED CLAMPING LENGTH



N.B.:
All Klein spiral router bits have technical data, dimensions and type of material marked on the shank.
Moreover the sign ⟩I⟨ indicates the minimum clamping length according to the standard EN847-2

The following reference tables are provided just as a guide, while various other conditions must be always taken in consideration, such as the characteristics of the wood piece (humidity, veins, etc.), the machine and tooling conditions, etc.

HOW TO CHOSE THE RIGHT SOLID CARBIDE SPIRAL BIT FOR ROUTING ON A CNC MACHINE

Woods / Router Bits Klein	Softwood (Cider, Poplar, Pine, etc.)	Hardwood (Ash, Walnut, Beech, Oak, Teak, etc.)	Pressed Wood (Plywood, Blockboard)	Laminated Wood (Veneered, melamine coated panels, HPL, etc.)

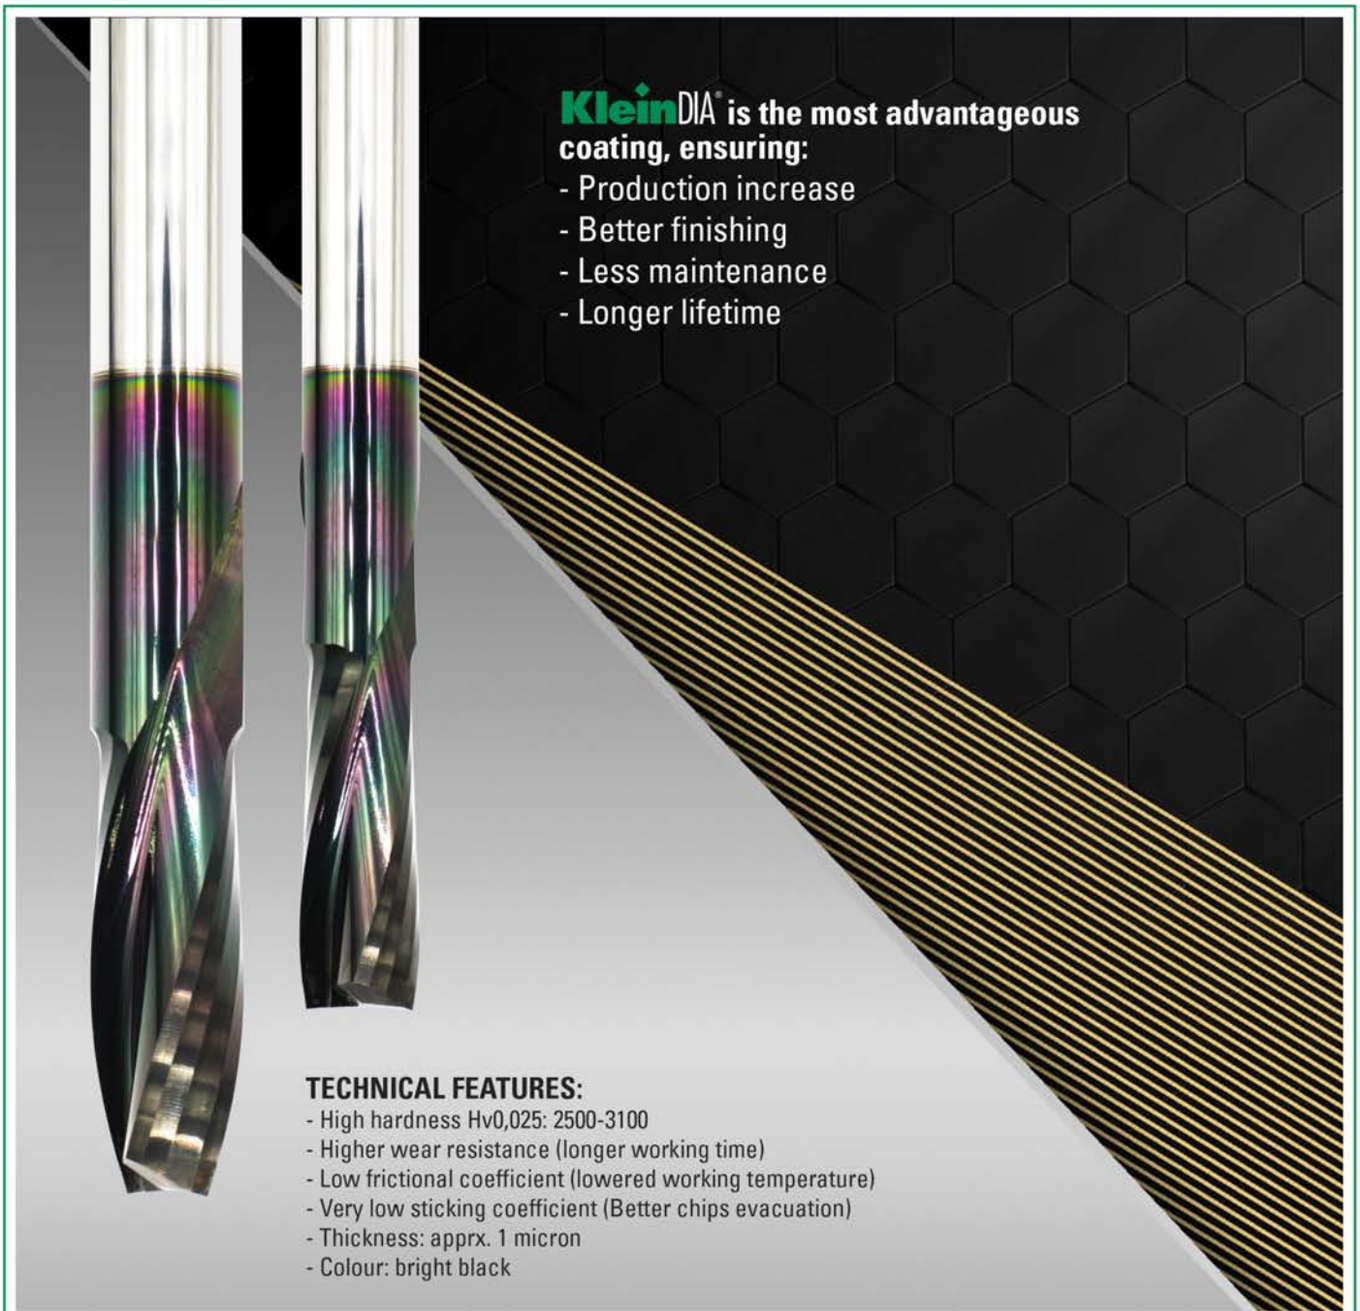
KleinDIA®

DLC COATING FOR EXCELLENT PERFORMANCE AND LONGER LIFETIME



KleinDIA® is the most advantageous coating, ensuring:

- Production increase
- Better finishing
- Less maintenance
- Longer lifetime

TECHNICAL FEATURES:

- High hardness Hv0,025: 2500-3100
- Higher wear resistance (longer working time)
- Low frictional coefficient (lowered working temperature)
- Very low sticking coefficient (Better chips evacuation)
- Thickness: apprx. 1 micron
- Colour: bright black

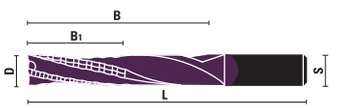
USE EXAMPLE
- Z=2/Z=3
- D= 14÷18 mm: RPM 12.000-20.000
- Stepwise processing 0,3-0,4 mm
- Can work deeply and have excellent chip evacuation

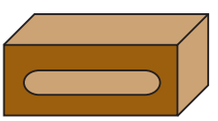
Router bits with diameter from 14 mm to 18 mm, are produced with shank for Seeger retaining rings

SOLID CARBIDE SPIRAL CUTTERS FOR LOCK-CASE Z=3, KleinDIA COATED

ART. T357.KD



UP TO 4/6X TOOL LIFE



- Right-hand rotation with **"UP CUT SPIRAL"**
- **Semifinished chip-breaker execution** (roughing and finishing)
- For locks and slot mortising
- **Polished and coated cutting edge for improved chip evacuation and less friction for excellent performance**
- To be used on machining centres, CNC routers and point to point machines
- For **softwood and hardwood, chipboard, MDF, HF**, plywood, plastic coated, mineral materials (**CORIAN®** ecc.)

HSK63F for ER 40 spring collets

Item

X118.002.N

Complete with:

- **T118.980.R - nr. 2**
  Collet chucks HSK63F for ER 40
- **T123.080.R - nr. 1 - D=8**
  T123.120.R - nr. 1 - D=12
  T123.160.R - nr. 1 - D=16
  T123.200.R - nr. 1 - D=20
  Spring collet ER 40 - DIN 6499
- **T144.161.R - nr. 1 - D=16**
  Solid carbide spiral cutters, roughing style Z=3
- **T142.081.R - nr. 1 - D=8**
  T142.120.R - nr. 1 - D=12
  Solid carbide spiral cutters, finish style Z=2
- **X502.203.R - nr. 1 - D=20**
  DP router bits
- **Z052.402.N - nr. 1**
  Wrenches for collet nut “standard” ER 40
- **Z052.315.N - nr. 1**
  Hook wrench 95/100 for art. T139.502.RK Tornado®
- **L115.050.R - nr. 4 - D=5x70**
  L115.050.L - nr. 4 - D=5x70
  L115.080.R - nr. 2 - D=8x70
  L115.080.L - nr. 2 - D=8x70
  HW dowel drills extra time Z=2
- **L141.350.R - nr. 1 - D=35**
  HW hinge boring bits Z=2+2
- **T139.502.RK - nr. 1**
  Dust & chip extraction nut type ER 40 - DIN6499 Tornado®

HSK63F for EOC25 spring collets

Item

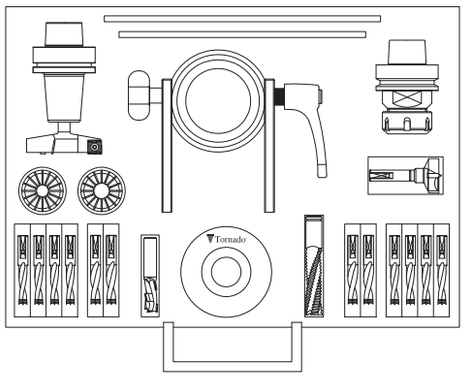
X118.003.N

Complete with:

- **T118.984.R - nr. 2**
  Collet chucks HSK63F for EOC25 with ball bearing
- **T124.080.R - nr. 1 - D=8**
  T124.120.R - nr. 1 - D=12
  T124.160.R - nr. 1 - D=16
  T124.200.R - nr. 1 - D=20
  Spring collet EOC25 - DIN 6388
- **T144.161.R - nr. 1 - D=16**
  Solid carbide spiral cutters, roughing style Z=3
- **T142.081.R - nr. 1 - D=8**
  T142.120.R - nr. 1 - D=12
  Solid carbide spiral cutters, finish style Z=2
- **X502.203.R - nr. 1 - D=20**
  DP router bits
- **Z052.310.N - nr. 1** (58/62)
  Wrenches for collet nut EOC25/DIN6388
- **Z052.315.N - nr. 1**
  Hook wrench 95/100 for art. T139.522.RK Tornado®
- **L115.050.R - nr. 4 - D=5x70**
  L115.050.L - nr. 4 - D=5x70
  L115.080.R - nr. 2 - D=8x70
  L115.080.L - nr. 2 - D=8x70
  HW dowel drills extra time Z=2
- **L141.350.R - nr. 1 - D=35**
  HW hinge boring bits Z=2+2
- **T139.522.RK - nr. 1**
  Dust & chip extraction nut type EOC25- DIN6388 Tornado®

TOOL KIT FOR CNC ROUTERS

ART. X118



HSK63F for ER 32 spring collets

Item
X118.011.N

Complete with:

- **T118.976.R - nr. 1**
  Collet chucks HSK63F for ER 32
- **T119.120.R - nr. 1 - D=12**
  T119.160.R - nr. 1 - D=16
  Spring collet ER 32 - DIN 6499
- **T144.161.R - nr. 1 - D=16**
  Solid carbide spiral cutters, roughing style Z=3
- **X500.120.R - nr. 1 - D=12**
  DP router bits
- **WE190.800.R - nr. 1 - D=80**
  Frese con coltellini HW per spianare Z=3
- **T120.620.R - nr. 1 - D=12**
  Shrink fit chucks HSK63F
- **Z052.401.N - nr. 1**
  Chiavi per ghiere tipo standard ER 32
- **Z052.315.N - nr. 1**
  Chiavi a settore 95/100 per art. T139.501.RK Tornado®
- **L115.050.R - nr. 4 - D=5x70**
  L115.050.L - nr. 4 - D=5x70
  L115.080.R - nr. 2 - D=8x70
  L115.080.L - nr. 2 - D=8x70
  HW dowel drills extra time Z=2
- **L141.350.R - nr. 1 - D=35**
  HW hinge boring bits Z=2+2
- **T139.163.N - nr. 1**
  Adjustable demount devices
- **T139.501.RK - nr. 1**
  Dust & chip extraction nut type ER 32 - DIN6499 Tornado®

HSK63F for ER 40 spring collets

Item
X118.012.N

Complete with:

- **T118.980.R - nr. 1**
  Collet chucks HSK63F for ER 40
- **T123.120.R - nr. 1 - D=12**
  T123.160.R - nr. 1 - D=16
  Spring collet ER 40 - DIN 6499
- **T144.161.R - nr. 1 - D=16**
  Solid carbide spiral cutters, roughing style Z=3
- **X500.120.R - nr. 1 - D=12**

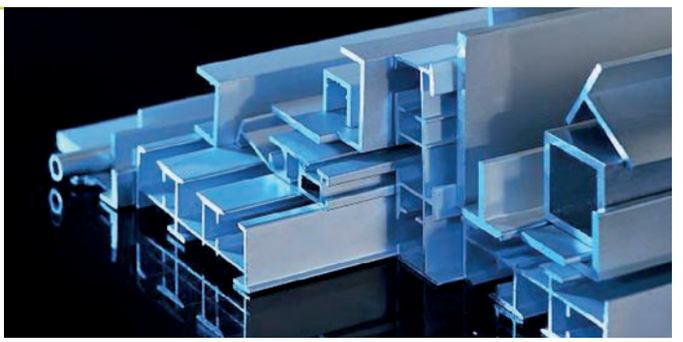
INDUSTRIAL QUALITY TOOLS FOR ALUMINIUM AND PVC

Leading manufacturer of tools for the industrial processing of aluminium, PVC, plastic, advanced materials and Alucobond.

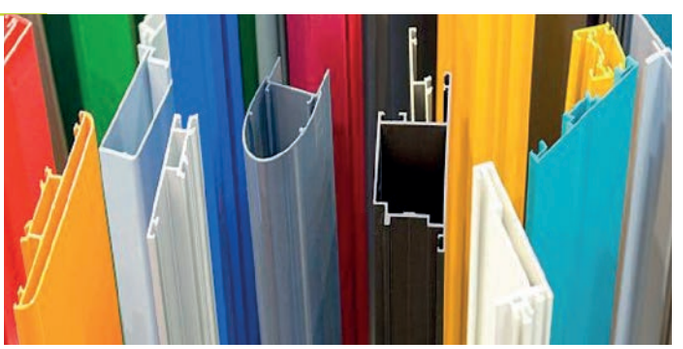
ALUMINIUM

Thanks to numerous collaborations with machine manufacturers, façade producers and dealers in the window and door industry, we have developed and expanded our product line for processing aluminium, lightweight alloys and non-ferrous metals. We have always been careful to offer innovative and high quality products to guarantee high performance for all types of industrial processing, always ensuring maximum reliability and precision to our customers.



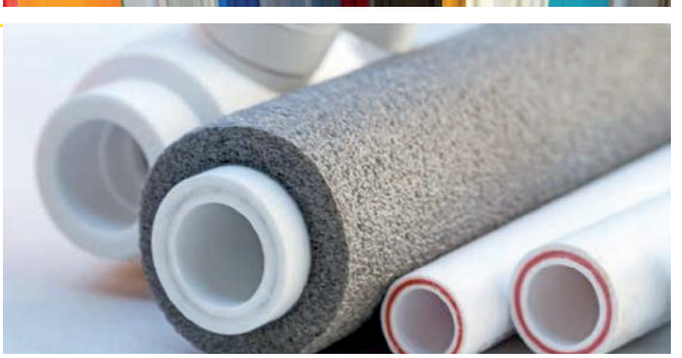
PVC AND PLASTIC

The processing of PVC profiles for modern window frames is constantly being upgraded, so we have increased our range of PVC and plastic processing products to offer state-of-the-art, high-tech products for all types of customers, from small window manufacturers to large industries.



ADVANCED MATERIALS

The machining of Advanced Materials is constantly growing and has become an important part of the industrial segment. We have therefore developed and produced tools that can meet the new market requirements to meet the most demanding quality standards in the machining of thermoplastics and composite materials, fibreglass, phenolic, hard plastics, plexiglass, …



ALUCOBOND®

Alucobond® is a sandwich flat panel that consists of two thin aluminum sheets binded to a non-aluminum core. ACM panels are being used to decorate interior office and as external cladding in buildings. When shaping the ACM panels, you must use a router bit specifically designed to groove the materials in the exact degree needed for the fold. Klein® router bits were designed for cutting aluminum and plastic sandwich materials like ALUCOBOND®, ALUPANEL®, REYNOBOND®, DIBOND®, STACBOND® with 90° and 135° angles. All bits are designed with flat bottoms with long-lasting industrial quality carbide.

www.aluklein.com

Our website specifically made with all the tooling for processing **Aluminium** and **Plastic material**.

SCAN ME!

KleinDIA®

DLC COATING FOR EXCELLENT PERFORMANCE AND LONGER LIFETIME

KleinDIA® is the most advantageous coating, ensuring:

- Production increase
- Better finishing
- Less maintenance
- Longer lifetime

TECHNICAL FEATURES:

- High hardness Hv0,025: 2500-3100
- Higher wear resistance (longer working time)
- Low frictional coefficient (lowered working temperature)
- Very low sticking coefficient (Better chips evacuation)
- Thickness: apprx. 1 micron
- Colour: bright black

SOFTWOOD - HARDWOOD

MDF - CHIPBOARD

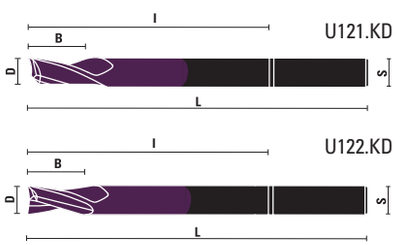
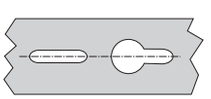
SOLID CARBIDE SPIRAL BITS CUT Z=1 - Z=2 LONG TYPE KleinDIA COATED

ART. U121.KD - U122.KD





UP TO 4/6X TOOL LIFE

- **Right-hand rotation with "UP CUT SPIRAL"**
- **Longer tool life and greater cutting quality**
- Polished cutting edge for improved chip evacuation. Mirror finish
- Spiral 'O' flute sharpening
- Long version for **deep machining operations**
- Use on CNC and high speed machines
- Use with coolant/lubricant is recommended
- For working: aluminium, fiberglass, plastic, phenolic, acrylic, PVC

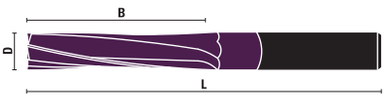
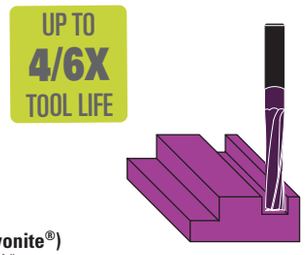
SOLID CARBIDE SPIRAL CUTTERS Z=2, KleinDIA COATED

ART. U302.KD





- **For working Solid Surface (Corian® - Avonite®)**
- Right-hand rotation with "UP CUT SPIRAL"
- **Polished cutting edge for improved chip evacuation and less friction by allowing better quality cuts and longer tool life**
- Special shear angle for working solid surface without breakage
- Specific solid carbide for **best cutting quality**

RH rotation	D	B	L	S

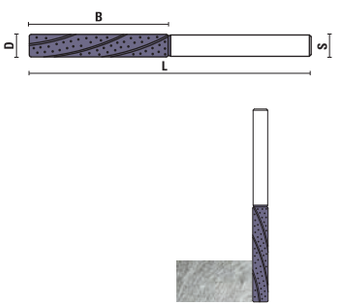
VHW SPIRAL CUTTER DOWNCUT WITH DIAMOND GRIT COATING

ART. XA183 - XB183



- **Electro plated Diamonds**
- **Suitable for laminated, fiberglass, carbon fiber and composites material**
- **Right-hand rotation with "DOWN CUT SPIRAL"**
- With special diamond coating for longer tool life
- For working with portable router and CNC

S ∅ 6	S ∅ 6,4 (1/4")	D	B	L

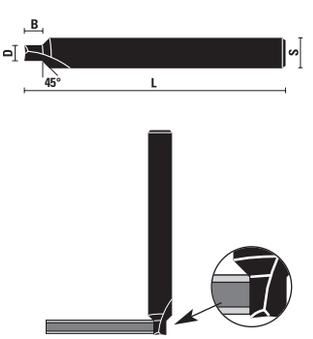
VHW STRAIGHT BITS FOR WORKING ALUCOBOND® AND ACM

ART. U108

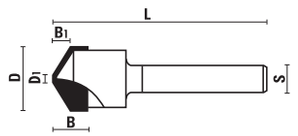


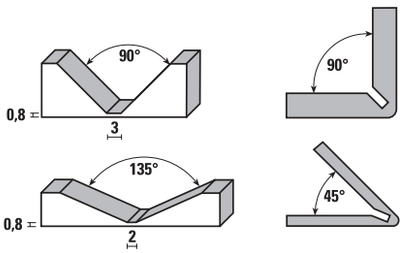
- Ideal for obtaining a smudge-free finish
- For routing on **ALUCOBOND®** , **ALUPANEL® REYNOBOND®**, **DIBOND®** and **STACBOND®**

S ∅ 8	D	B	L	Z	Rot.
U108.050.R	5	4	70	2+1	Rh

HW DRILLS FOR WORKING ALUCOBOND® Z=2

ART. U180



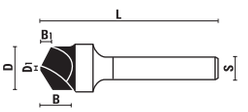


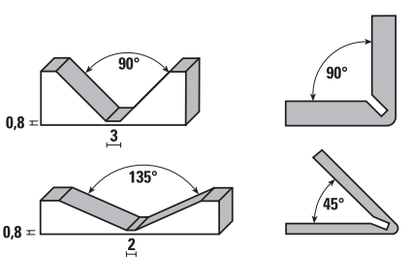
- Carbide tipped cutting edges
- For making V-groove folding on **ALUCOBOND®** , **ALUPANEL®** , **DIBOND®**
- Especially designed for scoring ACM materials with 90° and 135° angles (with flat bottoms), thus allowing a simple hand bending operation of the panel without cracking.
- For portable routers and CNC machining centres

S ∅ 8	D	D1	α	B	B1	L
U180.090.R	18	3	90°	10	8	60
U180.135.R	18	2	135°	10	3,3	60

SOLID CARBIDE BITS FOR WORKING ALUCOBOND® Z=2

ART. U181





- Solid carbide cutting edges
- For making V-groove folding on **ALUCOBOND®** , **ALUPANEL®** , **DIBOND®**
- Especially designed for scoring ACM materials with 90° and 135° angles (with flat bottoms), thus allowing a simple hand bending operation of the panel without cracking.
- For portable routers and CNC machining centres

S ∅ 8	D	D1	α	B	B1	L

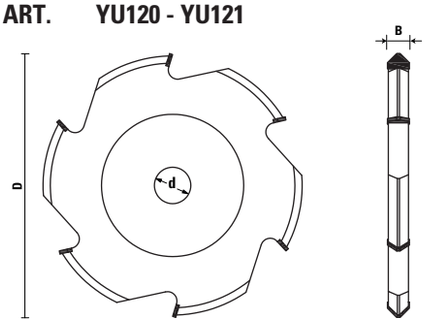
CARBIDE TIPPED MILLING CUTTERS FOR ALUCOBOND ® AND ACM

ART. YU120 - YU121



- Carbide tipped cutting edges
- For routing and folding on **ALUCOBOND®** , **ALUPANEL®** , **REYNOBOND®**, **DIBOND®**, **STACBOND®**
- Especially designed for scoring ACM (aluminium compaund material) with 90° and 135° angles (with flat bottoms) and rectangular groove for foldings up to 180°, thus allowing a simple hand bending operation of the panel without cracking
- For vertical panel saw and milling machine

Item	D	B	d	Z	α	R	D1
YU120.090.R	220	18	30	8	90°	-	3
YU120.135.R	220	18	30	8	135°	-	2
YU121.040.R	219	14	30	8	-	40	-

ADVANTAGES OF FOLDING AND ROUTING TECHNIQUE:
- Minimum investment
- Simple operating technique
- Low-cost manufacture of shaped parts like façade elements, frames, fascia claddings and roof edgings, corner pieces
- Good economy
- Tension-free folding, therefore no buckling in the corner area

INSERT ROUTER BITS

Klein trimming bits with straight cuts are thought for having a clean and well finished edge on laminated and veneered panels. They are subject to continuous security check, cutting tolerance and balancing. While the ball bearing (same diameter of the cutter) acts as a guide to protect the edge, the cutter will obtain a perfect and smooth work. Designed and manufactured to allow precise cutting and good chipping ejection.

HW INSERT FLUSH TRIMMING BITS Z=2

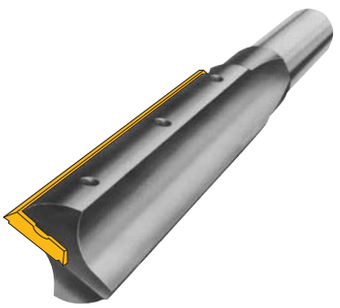
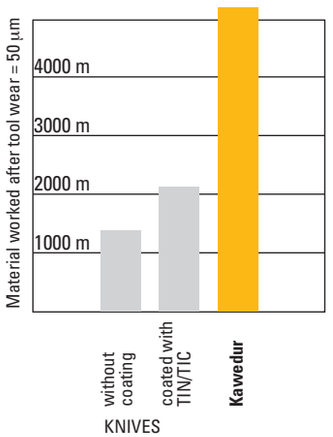
VERSOFIX CUTTERS AND KNIVES

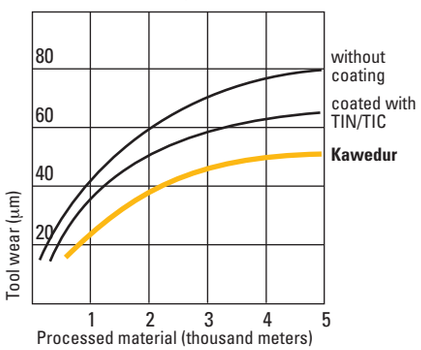
The best single flute replaceable tip straight cutters

The **VERSOFIX** tools and relating replaceable tips, due to their special design, give excellent result in high volume production and are suitable for use in all types of machines.
The insert knives are treated with a special coating ensuring the possibility to work also tough materials, i.e. laminated worktops or glass-reinforced plastic panels.
In the solid wood working there isn't any better solution when working with cutters with small shank diameter (∅8, ∅10, ∅12).
The "**Kawedur**" coating ensures a better chip flow and makes the life of the knives minimum twice longer than any other type of coating (TIN/TIC).





WORKING:
melamine coated chipboard



WORKING PARAMETERS:

RPM	n=18.000
Cutting speed	vs=14,5 m/sec
Feed speed	vf=6 m/min

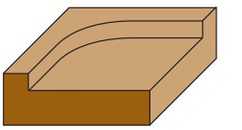
10° shear angle



- Used for **surfacing MDF and particle board** and making deep rabbet
- **10° shear angle** for better performance
- Suitable for processing ever kind of wood
- To be used on machining centres and CNC routers
- Item WE190.380.R and WC190.350.R are suitable for working with electric portable machines
- Right-hand rotation
- For greater performance PCD knives can be mounted
- This item is sold complete with a torx key

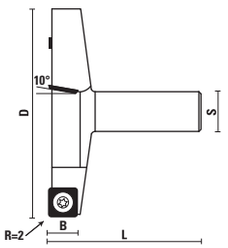
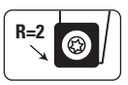
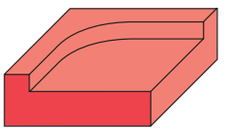
HW INSERT ROUTER BITS FOR PLASTIC MATERIAL

ART. W190.RU – WE190.RU – WG190.RU



10° shear angle





- Used for **surfacing plastic board material** and making deep rabbet (also known as Flycutters - Spoilboard cutters)
- Special insert knives with radius (R=2) for smoother cuts and no risk of marks and scratch.
- **10° shear angle** for better performance
- To be used on machining centres and CNC routers
- Right-hand rotation
- This item is sold complete with a torx key

INSERT ROUTER BITS FOR PORTABLE ROUTERS

Always looking for innovative products and most useful solutions, **SISTEMI** has developed a new line of router bits **Klein** with interchangeable carbide knives, which have a higher hardness than the tips used in traditional brazed router bits.
The main advantages granted by the use of HM reversible knives and the possibility of their easy replacement are:
- **Longer tool life** ⇒ the knives are getting less worn out and in case of damage they can be easily replaced;
- **Better finish quality** ⇒ also working abrasive materials, the cutting edge can be maintained always sharp;
- **Higher measures precision** ⇒ the dimensions of the tools are not changing because there is no resharpening;
- **Better Quality/Price ratio** ⇒ higher production efficiency, less costs and better performances.

DP ROUTER BITS

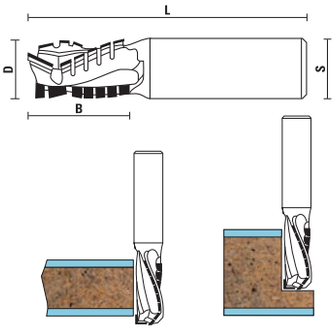
ART. X505 - X506



- **DP plunging tip**
- Recommended for grooving and routing veneered and double-sided laminated boards, also MDF
- Excellent finish on both sides of the workpiece thanks to the alternate shear angle
- **Higher feed rate** (max. 20.000 m/min)
- Used on CNC router machines
- Tooth height **H= 4 mm**

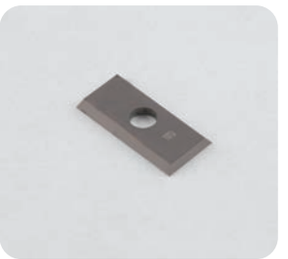
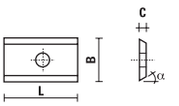
DP STANDARD REVERSIBLE KNIVES

ART. XZ055





SOLD INDIVIDUALLY

UP TO 30/50X TOOL LIFE

- These knives replace perfectly the HW standard knives
- **2 cutting edges**
- Lifetime up to 35/50 times longer compared to the HC05 (HW) knives
- 1 fixing hole
- Regrindeable knives
- **CAUTION***:* when sharpening a multicutter bit make sure that all the knives are mounted at the same height

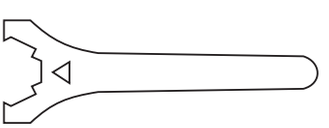
WRENCHES FOR COLLET NUT “STANDARD”

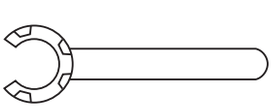
ART. Z052



Item	Description
Z052.401.N	Wrench for collet nut ER 32 “standard” type
Z052.402.N	Wrench for collet nut ER 40 “standard” type
Z052.404.N	Wrench for collet nut ER 20 “standard” type
Z052.407.N	Wrench for collet nut ER 25 “standard” type
Z052.409.N	Wrench for collet nut ER 16 “standard” type

WRENCHES FOR COLLET NUT “MINI”

ART. Z052



Item	Description
Z052.503.N	Wrench for collet nut ER 25 “mini” type
Z052.505.N	Wrench for collet nut ER 16 “mini” type
Z052.508.N	Wrench for collet nut ER 20 “mini” type
Z052.511.N	Wrench for collet nut ER 11 “mini” type

TORQUE WRENCHES

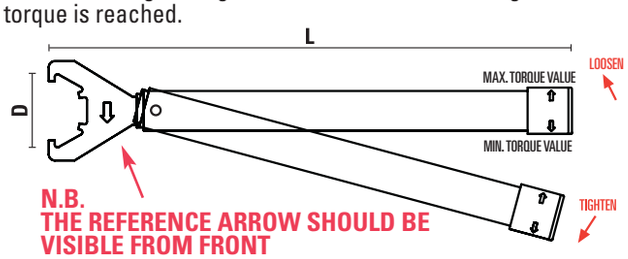
Why should I use a torque wrench?

While setting a tool it is extremely important to tighten it appropriately. If not effectively tight indeed a cutting tool could slide away from the tool holder during the working process. On the other side, an excessive tightening can cause damages to the tool holder or spring collet or the tool itself.

How to use

Turn the handle to choose the correct torque power based on the router bits diameter. While tightening with constant action a strong shot is perceived both mechanically and acoustically. This indicates that the tightening torque is reached.

- Adjustable torque wrench is suitable for fastening and tightening Klein® nuts and collets properly. Use them every day in order to reach a longer tool life and better cutting performance.
- Permissible deviation/tolerance (according to DIN ISO 6789): pm 4%
- While setting a tool it is **extremely important to tighten it appropriately**. If not effectively tight indeed, cutting tool could slide away from the tool holder during the working process. On the other side an excessive tightening can cause damages to the tool holder or spring collet or the tool itself.
- The wrench indicates when the torque (Nm) is reached with a strong noise according to the value in the corresponding table.
- **Each torque wrench is supplied in its own cardboard box with instruction sheet and calibration test report unique for each wrench.**



Dr. (1) Collets as per drawing n. 1 must be tightened by setting the minimum torque value and rotating the handle counterclockwise.

Dr. (2) Collets as per drawing n. 2 must be tightened by setting the maximum torque value and rotating the handle clockwise.

TORQUE WRENCHES FOR "MINI" NUTS

ART. Z052

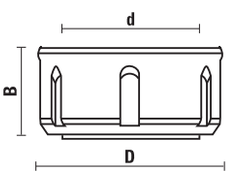
COLLET NUTS WITH BALL BEARINGS

ART. Z091



- The ball bearing clamping nut **improves the clamping precision** thanks to a **homogeneous clamping force**
- Easy and fast removal of the collet from the nut
- It can be used **both for right-hand and left-hand rotation**

Item	Type	D	B	d	Rot.
Z091.100.R	DIN 6499 (ER 25)	42	20	M 32x1,5	RH/LH

REVERSIBLE KNIVES

Grades and application chart

Grades	Cobalt %	Density gr/cm³	Hardness HV10	Resistance to breakage MPA	Softwood	Hardwood	Chipboard	MDF	HDF
Fine grain									
KCR06	3	15,30	1950	2600	XX	XX	XXX	XXX	XXX
KCR08	4,2	15,20	1920	2600	XXX	XXXX	XXX	XXX	XXX
MG06	3	15,35	2020	3300	XXX	XX	X	X	X
MG18	10	14,45	1570	3000	XXX	XXX	XX	XX	XX
Ultra fine grain									
KCR02+	2	15,35	2240	2500	-	-	XXXX	XXXX	XXXX
Nano grain									
UMG04	2,2	15,30	2500	3200	-	-	XX	XXXX	XXXX

X= fair
XX= good
XXX= very good
XXXX= excellent

KCR06 - KCR08

Covers 99% of all applications (soft and hard wood, melamine, HDF, MDF).
More precise cutting edge execution due to submicrograin grade.
High corrosion resistance due to special power mix.

MG18

By virtue of its micrograin structure MG18 is the optimum grade for 45° cutting edges. It creates a sharp, tough and wear resistant edge. This makes it ideal for machining hardwoods and brings the benefit of increased tool life.

KCR02+

This is an even harder micrograin grade giving an increase of 50% in tool life compared with MG06.
It allows longer production running on MDF o HDF.

UMG04

Tests have shown tool life increased by 3 times compared to KCR02+ or 9 times the life of standard grades.
For cutting very hard materials this is an economical alternative to DP tools with far less financial risk should breakage occur.

Grain size definition	Average grain size range
Nano grain	< 0,2 µm
Ultrafine grain	0,2 < 0,5 µm
Fine grain	0,5 < 0,8 µm

KleinDIA®

DLC COATING FOR EXCELLENT PERFORMANCE AND LONGER LIFETIME

KleinDIA® is the most advantageous coating, ensuring:

- Production increase
- Better finishing
- Less maintenance
- Longer lifetime

TECHNICAL FEATURES:

- High hardness Hv0,025: 2500-3100
- Higher wear resistance (longer working time)
- Low frictional coefficient (lowered working temperature)
- Very low sticking coefficient (Better chips evacuation)
- Thickness: apprx. 1 micron
- Colour: bright black

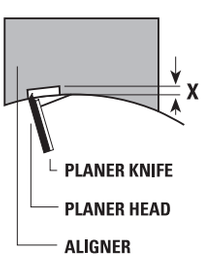
MAGNETIC ALIGNERS FOR PLANER KNIVES

ART. Y200



Klein magnetic aligners for planer knives have been specially designed for rapid knife positioning after sharpening. They are made of galvanized steel and feature permanent magnets.
In just a few minutes, in a simple and precise way, problems of knife alignment after sharpening are solved.
No adjustments are required. Simply position on cutterhead along the step where the knife is to be rested. All your knives will be parallel and positioned with the same working thickness.

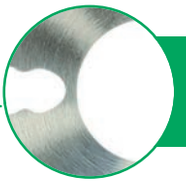
INDUSTRIAL CIRCULAR SAWBLADES

Klein sawblades are high quality products, guaranteed by the choice of best raw materials developed in collaboration with leading European manufacturers of steel and carbide. Throughout the production cycle, controls are followed extremely scrupulous and final acceptance ensures that all the characteristics of the saw blades are meeting the highest level of quality standards.

LASER CUT EXPANSION SLOTS allow heat dispersion and improve blade stability.

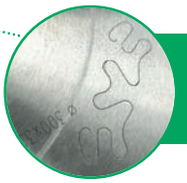


LASER CUT STEEL BLADE with German steel to provide great tolerances and stability.

MICROGRAIN INDUSTRIAL CARBIDE TIPS made by Ceratizit to provide sharper edge and longer cutting life.

TENSIONING RING AND BALANCING to guarantee highest cutting performance, concentricity and flatness of the blade

TRI-METAL BRAZING OPERATION (alloy+copper+alloy) for best performance and maximum resistance to stress



LASER CUT ANTI-VIBRATION SLOTS especially designed to improve finishing and reduce noise

LOW NOISE SAWBLADES

According to the latest technical tests, all the Klein industrial sawblades are manufactured with an advanced system of noise reduction guaranteed by a scrupulous position of the laser slots, different for each diameter. The body of the sawblades remains solid and perfectly tensioned while sound waves generated during cutting are absorbed both longitudinally and crosswise.
The Xtra cut sawblades have a special sound absorbing plastic resin filled inside the silent slots that helps to reduce dramatically vibration and noise during cutting. This innovative technology allows the blade to work with less effort, thus ensuring a better finish and longer blade lifetime, even after regrinding.

INDUSTRIAL SAWBLADES

SILENT SLOT	NO NOISE

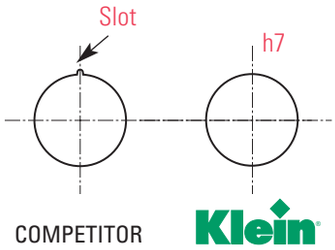
Xtra cut SAWBLADES

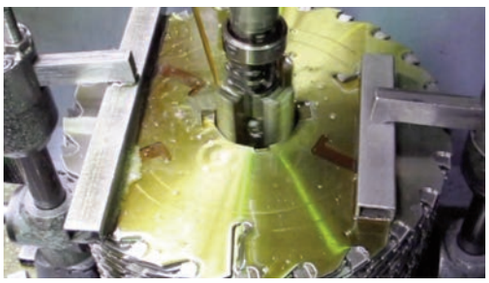
SILENT SLOT WITH RESIN	NO NOISE NO VIBRATION

WATCH VIDEO

LASER CUTTING

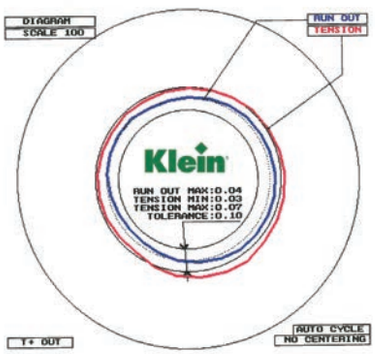
The Klein sawblades are exclusively worked with laser cutting. **Bores and keyways are honed to ensure maximum precision** (h7). Without this process there will be a visible slot on the bore edge.





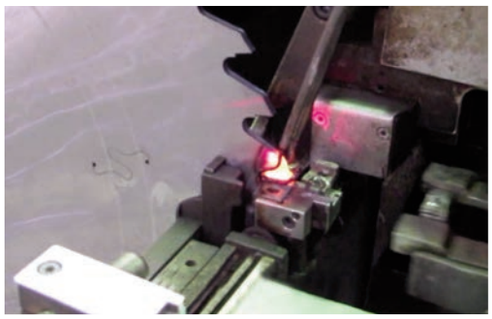
TENSIONING AND BALANCING

Are operated with completely automatic machines, which assure **the absence of vibrations and higher quality results**. The visible ring on the body of the saw blades guarantees maximum cutting performance, concentricity and flatness tolerance of the blade.



MICROGRAIN INDUSTRIAL CARBIDE TIPS

SISTEMI uses only Ceratizit micrograin carbide tips, which offer competitive advantages due to innovative and sophisticated carbide grades and a variety of geometries available for industrial applications on any material. They are characterized by excellent wear resistance and toughness, ensuring outstanding precision and maximum lifetime, with an increase in lifetime of up to 30%.



Xtra cut®

THE NEXT GENERATION OF INDUSTRIAL SAWBLADES

SISTEMI introduces the new Klein Xtra cut blades to take the cutting experience to the **next level and increase productivity**. The manufacturing process is entirely laser-machined to ensure maximum precision. Tensioning and balancing are managed for maximum performance; in fact, the superior blade flatness extends blade life and delivers exceptional finishing results.

In addition, the silent slots are made with a distinct geometry and are filled with a special synthetic resin to avoid vibration, reduce noise and increase stability.

NO NOISE
NO VIBRATION

Carbide tips with original Ceratizit micrograin last longer with a sharp edge, providing up to 30 percent longer life. Klein Xtra cut is the best solution for every need, ideal for cutting ***veneers and laminates, plywood, MDF, particle board and plastic laminates, PVC, aluminum, plastic and Alucobond***, ensuring a better finish and longer life for the best performance.

NUMBER OF TEETH SUGGESTED:

Calculation of the number of teeth, given the diameter of the saw blade and the thickness of the material to be worked.

$$Z \text{ (nr. theet)} = \frac{D \text{ (diameter/mm)} \times K}{Sp \text{ (thickness/mm)}}$$

K = 7 for ripcutting on natural wood
K = 9 for ripping or crosscutting
K = 11 for crosscutting of hard woods and hard materials

WZ (ATB): alternate top bevel teeth, suitable for soft and hardwood, fibre materials, MDF. Especially clean cuts.

FZ/TR (TCG): triple chip teeth form, suitable for solid wood, plastic coated materials, non ferrous profiles, hardwood.

FZ: flat teeth, suitable for cutting along grain on large cutting height soft and hardwood.

HZ/DZ: Hollow tooth/inverted V-tooth, suitable for saw benches on plastic coated chipboards and fibre materials.

FZ/FA: Flat tooth with bevel, with chip limitor, for cutting timber, also in presence of concrete or metal remains, nails, etc.

LFZ: flat teeth with chiplimitor, suitable for tablesaws. For cutting along and across grain in wooden boarding materials.

KON/FZ: conical tooth, used on scoring blades

WZ/FA: alternate top bevel teeth, suitable for soft and hardwood, fibre materials, MDF. Especially clean cuts.

TR: trapeizodal tooth, used on saw blades "dry" (Item LZ).

ES: (ES-L/ES-R)
One-sided top bevel tooth (right or left), used on edge banding machines or hogging units.

BW: special tooth shape for item "PB"(steel blade, for cutting metals).

C: special tooth shape for item "PA"(steel blade, for cutting metals).

Klein saw blades for portable machines are delivered in hanging packaging while those for industrial machines in a very robust carton packaging.

PACKAGING SAW BLADES FOR PORTABLE MACHINES

Sawblades	Dimensions
∅127÷∅140	165x179x5
∅150÷∅190	215x234x5
∅200÷∅240	254x277x5

Klein extra thin professional sawblade.

Sawblades	Dimensions
∅85	100x140
∅136	159x184

∅190	208x233

Sawblades	Dimensions
∅210/216	232x252
∅250	258/270
∅305	322x352

All Klein packagings are marked with the symbol meaning 100% recyclable carton, vegetable oil-based inks and glues.

PACKAGING SAW BLADES FOR INDUSTRIAL MACHINES

Our saw blades are high quality products, which have been produced choosing the finest raw material and guaranteed by special and scrupulous controls during the production cycle. The final acceptance ensures that all the characteristics of the saw blades Klein® are meeting the highest standard of quality. When you work with a Klein® saw blade, you choose a reliable tool, which can give you a better finish and a higher precision compared to other brand.

Sawblades	Dimensions
∅80÷∅150	210x210x15
∅160÷∅210	255x255x15

USEFUL INFORMATION

- Fine cut HW sawblades
- High teeth number sawblades are recommended for best finishing cut.
- Our items AA160.02420 - AA160.03020 - AA160.04820 are suitable for being used on Festool TS 55, TSC 55, ATF 55, AP 55.
- Our item AA225.03430 is suitable for Festool trimming saw PRECISIO CS70

USEFUL INFORMATION

- Fine cut HW sawblades

EXTRA THIN PROFESSIONAL SAWBLADES

HW HARDMETAL CARBIDE — Fine hardmetal powder grain creates compact and sturdy carbide teeth that reduce abrasion, improve quality of the cut and increase life of the blade.

EXTRA THIN KERF — The special extra-thin kerf design allows fast and effortless cuts on cordless and portable saw, ensuring a higher feed rate and faster work progress.

LOW NOISE — Our laser-cut silent slots reduce noise, prevent sideways movement and improve cutting quality. The laser-cut expansion slots prevent stress and warping.

HIGH QUALITY STEEL — Our superior quality steel of the sawblade bodies is hardened up to HRC 46 and cut by laser to guarantee higher precision, less stress and better balancing.

TEETH FEATURES

- **WZ (ATB)** alternate top bevel teeth
- HW grade: KCR10

MATERIALS

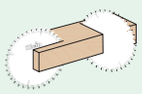
Hardwood



Softwood

MACHINES

Multi-rip

CNC machining centres

USEFUL INFORMATION

- With HW rakers for better cutting quality
- **Balanced sawblades to work in perfect stability**
- Possibility to reach high feed speeds (up to 20/30/40 mt/min)
- Ideal for vertical and horizontal cutting of beams, roof production and heavy wooden carpentry

HW FINE FINISHING SAWBLADES

ART. MLS

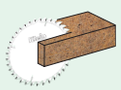
MP500.12040 selling out	500	40	3,8/3,2	120	

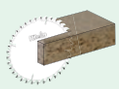
TEETH FEATURES

- **FZ/TR (TCG)** triple chip teeth
- HW grade: SMX (P20 - P25 - C6)

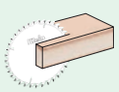
MATERIALS



MDF



Chipboard



Sandwich panel

MACHINES

Power mitre saw

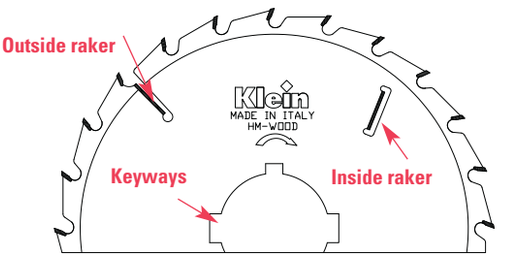
Table saw

USEFUL INFORMATION

- Pin holes: **PH01**= 2/10/60

Some tips for working with multi-ripping saws

A) When operating with a multi-rip saw the use of shoulder saw blades is very important (Items FG).
Positioned as the first blade on the machine side they allow, especially during heavy-duty processing or working uneven timber, that the forces have a proper distribution.
B) The use of rakers is highly recommended to avoid the saw blade rubbing on the wood, causing overheating and friction which can damage the saw blades.
C) If the machine spindle has only one keyway it is highly recommended not to use saw blades having two to avoid any unbalanced coupling.
D) Keyways of the saw blades and machine spindle are best coupled when they have the same dimensions.



HW MULTIRIP SAWBLADES WITHOUT RAKERS

TEETH FEATURES

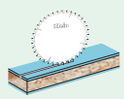
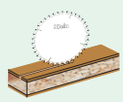
- **KON/FZ** conical teeth
- HW grade: KCR05+ (K01-C4)

MATERIALS



Scoring sawblades for cutting laminated materials



Scoring sawblades for cutting veneer board

Scoring sawblades for cutting MDF

MACHINES

Panel saw

Beam saw

USEFUL INFORMATION

- To be used on panel sizing machines that allow the vertical adjustment of the scorer in relation to the panel sizing sawblade.

TEETH FEATURES

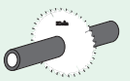
- Item **PA** = **teeth form "C"** suitable for cutting steel tube with thickness greater than 3 mm.
- Item **PB** = **teeth form "BW"** suitable for thinner steel tube

MATERIALS



Steel and ferrous material

MACHINES

Power mitre saw

USEFUL INFORMATION

- **Vaporized** execution for steel, pipe, ferrous materials

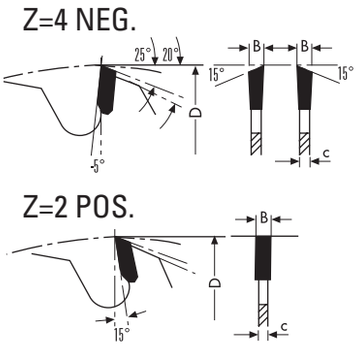
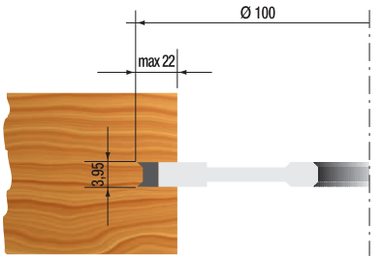
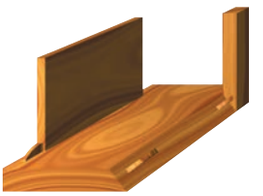
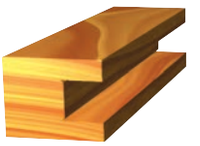
HW "LAMELLO®"- GROOVE CUTTER

ART. AH









- T.C.T. brazed cutter with spurs for making grooves on any kind of wood
- For hand milling machines
- Suitable for "Lamello" and Clamex S biscuit joiners
- For Zeta, Top 20, Top 21, Classic systems
- Manual feed
- Can also be used on CNC machines together with adapter (item T128.141.R)

Item	D	d	B	Z	V	Pin holes
AH100.20622	100	22	3,95	2	4	4/4/36

HW "LAMELLO®"- GROOVE CUTTER

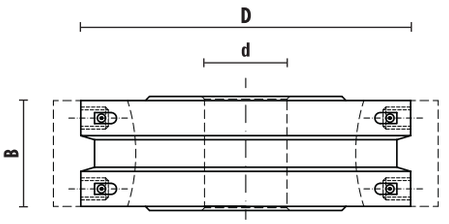
STEEL CUTTERHEADS B=40 WITH CHIP LIMITERS

ART. SA



- Tool body in steel
- Equipped with SP knives and chip limiters profile "0"
- For spindle moulders with manual feed (MAN)
- To be used with knives **B=40x4 mm** (Art. SA0 page 13.10÷13.15) and chip limiters (Art. SA1 page 13.10÷13.15)
- For solid wood

The best for a proper maintenance

KleinTOPUP

Table and tool surface sealant

- Eliminates "hang-ups" on sliding surfaces
- Protects all tools and equipment from rust.
- Up to 30% slicker than paste wax.
- Prevents rust 5 times longer than paste wax or silicone.
- Easier and quicker to apply
- Contains no silicone or petroleum oil.
- Will not stain wood or interfere with glues or finishes.
- Perfect for table saws, drill presses, lathes, planers, band saws, mitres, panel saws and all hand tools.
- Environment-friendly, doesn't contain CFCs or any other ODS.

Item	Description
KLEINTOPUP.400	Spray Can 400 ml.

KleinDRYUP

Blade and bit cutting lubricant

- Prevents resin build-up.
- Reduces blade cleanings.
- Extends overall life of blades and bits by up to 3 times!
- More than doubles time between resharpenings.
- Contains NO silicone or petroleum oil. Will NOT stain wood or interfere with glues or finishes.
- Reduces cutting friction and heat by 30%.
- Prolongs equipments life by reducing saw or drill motor drag by up to 25%.
- Increases productivity by less downtime for saw blade changeovers.
- Works equally well on steel or carbide, stellite and diamond-tipped cutting blades.
- Environment-friendly, doesn't contain CFCs or any other ODS.

Item	Description
KLEINDRYUP.400	Spray Can 400 ml.

KleinPROTECT

Protective lubricant for cutting tools

- Removes easily and rapidly any residues of grease, coolants and synthetic compounds.
- If regularly used, protects and prevents from rust and corrosion
- Displaces moisture and condensation in case of difficult weather conditions.
- Extremely efficient on every metal surface
- Can be applied also on alloys containing copper, magnesium, nickel, steel, stainless steel, titanium and zinc, or polymers and elastomers.
- Can be used on all types of delicate machinery and mechanisms for weapons (according to U.S. Army specifications).

Item	Description
KLEINPROTECT.400	Spray Can 400 ml.
KLEINPROTECT.5000	Liquid – Tank 5 L

KleinCLEANUP

Detergent for cutting tools cleaning

- Water-based detergent for clearing tools
- Recommended for removing resin or sludge from tools
- No corrosive or dulling effect
- Not foaming
- Not flammable, doesn't contain solvents
- Non-toxic, not health-harming
- Biodegradable
- Suitable also for washers
- Can be used on any mechanical parts or tools also mounted on groups for windows

Item	Description
KLEINCLEANUP.1000	Liquid – Bottle 1 L
KLEINCLEANUP.10000	Liquid – Tank 10 L

KleinWASHER

Automatic Tool Washer

- Suitable for washing any metal parts and tools from the industry to the smaller workshop
- For tools of various dimensions, also for tool groups for windows thanks to its rotating tank with an height of 350 mm
- Heated biological operating mode
- To be used only with water-based detergent (see our item KleinCLEANUP)

Includes:

- Stainless steel housing
- Rotating tank D=600 mm
- Tank's capacity: 75 L
- Maximum payload: 100 kg
- Maximum height of the tools: 350mm
- Stainless steel upper, under and lateral washing arms
- Timer
- Thermal resistance
- Single-phase 1 hp pump
- Dimensions: 940x790 h930 mm
- Dimensions packing: 1210x1050 h1200 mm
- Weight: 65 kg

Item
KLEINWASHER

See section 16 page 16.16

KleinCLEANER

Manual Tool Washer

- Can wash any type of tools or metal parts
- Easy to be used with water and spray gun
- Heated biological operating mode

Includes:

- Spray gun
- Tool holding grid
- Stainless steel tank with thermal resistance
- Air-operated double diaphragm pump 5 L/min
- Tank dimensions: 600x500 h 250 mm
- Tank capacity: 70L
- Dimensions: 700x560 h1000 mm
- Dimensions packing: 970x670 h1020
- Weight: 30 Kg

DIAMOND WHETSTONE

DMT®

Grind and spare!
A complete range of diamond stones for any kind of application
JUST DIAMOND CAN GIVE YOU THE EDGE OF PERFECTION!

FAST - Hardest material; most efficient sharpening abrasive

EASY - Light pressure produces a sharp edge with just a few strokes

CLEAN - Use water for lubricant - No oil, no mess!

VERSATILE - Hones all hard materials: carbide, steel, etc.

DURABLE - Stays flat

- **X-Coarse** Most rapid stock removed for dressing nicked or damaged knives and chisels or sharpening heavy cutting tools such as axes and lawnmower blades.
- **Coarse** Rapidly restores a sharp edge on dull knives and tools. Perfect for honing garden tools, sport knives, scissors and general tools.
- **Fine** Ideal for honing a razor sharp edge on quality cutlery and woodworking tools that are regularly maintained.
- **Extra-Fine** the ultimate edge refinement for the finest quality knives and woodworking tools. Recommended after edge has been sharpened on the grit.

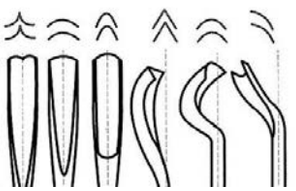
DIAMOND WAVE SHARPENERS FOR RADIUS CUTTERS

ART. WAVF



- **DIAMOND WAVE**
- Ideal for resharpening curved tools, like gouges, carving and wood turning tools
- Convex and concave diamond surface in one sharpening tool
- Resharpen tools with radius from min. 1,6 to max. 25 mm.
- Including anti-slippery pad for easier use
- No oil is needed – sharpen dry or with water

Item	Grit sizing	Dimensions
WAVF	Fine	30x250x25

8" DIAMOND WHETSTONE WITH BASE

ART. WM8FC-WB

- **DUOSHARP**
- Double-sided stone: • **Coarse grit** to quickly restore a neglected edge
  • **Fine grit** for a razor sharp edge
- Ideal for all craftsmen who need to resharpen straight cutting edges
- Can resharpen a wide range of materials: carbide, steel, ceramic, glas, stone
- Supplied with plastic base

Item	Grit sizing	Dimensions
WM8FC-WB	Coarse/Fine	203x66 mm
Spare parts		
WM8FC	Coarse/Fine	203x66 mm

NEW DIAMOND SHARPENERS "ECONOMY LINE"

Sharpens, hones & laps: knives, router bits, plane blades, ski edges, fish hooks, garden tools, chisels, scissors, sawblades, lapidary, ceramics, broadheads, climbing equipment, masonry drills, axes, engraving tools, farm tools, mold & dies, planer/jointer knives, speed skates, carbide, glass.

COARSE (C) - 45 micron
General use-rapidly restores a dull edge on a tool or knife

FINE (F) - 25 micron
Restores a razor edge on well maintained tools and knives

Ex-FINE (E) - 9 micron
The ultimate edge refinement after stock removal on coarser diamond

D6C	Coarse	150x50x6

GRINDING WHEELS

As a result of long experience in the production of special, high precision tools, **SISTEMI** has developed the Super Diamond **Klein**, which allows performing quicker and more economically efficient abrasive machining operations.
Obtained by a process of synthesis to very high pressure and temperature, the diamond used in the grinding wheels **Klein** is artificial and has been tested to provide the best possible result on the machines for regrinding tools for woodworking, while for ferrous materials, such as tools in HSS, CBN (Cubic boron nitride) is used.

The choice of grain size plays also an important role and **SISTEMI** has decided to limit the amount of grains available in its program by choosing those with the best performance of most use.
The grains of diamond or CBN are agglomerated with different binders, classified according to the following characteristics:
- Capacity of particle retention
- Capacity of discharging worn grains
- Dressing capacity
- Thermal resistance
- Thermal conductivity
- Type of material to be processed

The attention to component selection and manufacturing process ensures that **Klein** grinding wheels are products of high precision. Mounting flanges, back-plates or adapters must be absolutely used and kept in good condition. All possible defects in the wheel-arbor coupling must be corrected before starting the wheel.
Furthermore it is important to remember that the use of coolant increases the cutting performance of the grinding wheels, reducing friction, heat generation and jamming of the abrasive surface.

Our Super Diamond **Klein** can be supplied in different shapes or dimensions on request, as well as in other grain sizes or bond types.

GRINDING WHEEL FOR ROUNDED SPURS DOWEL DRILLS

ART. X900

PRE SET PERFORMANCE

The m. conti has been producing presetters for over 30 years. This experience has allowed to understand the importance of ease of use and ergonomics. In m. conti these important factors are held in great importance when designing presetters. Everything is within reach and easy to handle. Designed and developed in the field of tooling manufacture, the **preset PERFORMANCE** are also essential in sharpening centers and production units of furniture or windows, for checking the condition of the tools and their settings before being mounted in the machine. **The preset PERFORMANCE** is supplied with a cone-holder HSK63F.

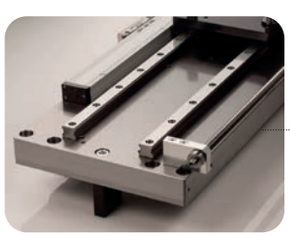
AXIS Z: Oversize, heavy duty, steel column. Thermically stabilized. SP class precision linear guide and preloaded with recirculating bearings. Linearity of movement is guaranteed by **1 guide with four-row linear recirculating ball bearing** with preloaded slides. It is equipped with glass optical scale with **micrometric resolution (0,001)** and supplied with their inspection certificate.



AXIS X: Stabilized steel plate, ground to a ±2 planarity. Guides are directly fixed to the steel base of the presetter to guarantee constant geometry alignment. Linearity of movement is guaranteed by **2 parallel guides with four-row linear recirculating ball bearing** with preloaded slides. Guides are directly fixed to the steel base of the presetter to guarantee constant geometry alignment. It is equipped with glass optical scale with **micrometric resolution (0,001)** and supplied with their inspection certificate.

Monitor full HD 24"

Interchangeable tool sleeves are made in tempered steel with high precision (internal cone run-out ±2µ). **Calibration spheres integrated** in the tool sleeve **for fast and precise zero setting.**

I - TECH SOFTWARE C.V.S. - FULL (Conti Vision System)
Software is the interface between the presetter and the user. The software is based on a high performance PC with last generation Windows® operating system.

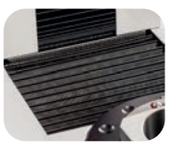
PRODUCT FEATURES

The PERFORMANCE range is equipped, as a standard, with Interlock System. The system is flexible and can be used with the vast majority of standard pull studs. Tool sleeve rotation brake is also a standard feature.

Pneumatic axis movement allows fast and precise positioning of the camera thanks to a button on the ergonomic handle.

Two manual wheels allows **micrometric movement** of both Z and X axis for best precision and accuracy.

Camera is a high-resolution C-MOS camera with telecentric lenses. It offers a **field of view of 7x7 mm** (0,27''x0,27'') in both Profile View and Real View mode and 40x enlargement.



High Performance dust guards maintain the presetter guides and sliders in perfect shape at all times. The presetter can work in difficult conditions.

LED ring cold light for the frontal illumination of tool surface. Light intensity regulation is possible.

A height adjustable support tray holds the wireless mouse and keyboard becoming an efficient work station.

A label printer supplied in order to print relevant tool data.

PC with last generation Microsoft® operating system. Data saved to SSD hard drive.

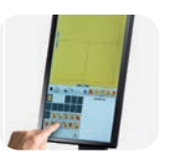
LAN connection to transfer data through a company network directly to machine tools.

Connection to other tool data transmission systems such as BALLUFF® is also possible as well as Teleservice diagnostics.

A big service cabinet has been created below the Preset. Easy to access it is an easy way to have equipment protected but all within reach.

OPTIONAL

Item **PRE-SET BL.HS.HSK63**
Cone holder HSK63 for mechanical locking with Interlock System.



Item **PRESET 105**
22" touch screen
(To be included at the time of order and replace the standard)

SOFTWARE - CONTI VISION SYSTEM

ALL DATA IN ONE VIEW

Simple, multi-language and intuitive the CONTI VISION SYSTEM software is easy for everyone. All functions are visualized, with easy to understand icons. It is possible to create up to 200 machine origins and memorize 200 tools for each machine. The tool measuring interface works like a real CAD and **any tool measure can be acquired**. The new **DXF function** allows the user to compare tool profiles against imported files or to scan and acquire a tool geometry. The new **GHOST function** permits to measure the maximum diameter and profile simply rotating the tool. **Real view tool inspection mode** clear, 40x enlargement, view of tool surface.

PRE SET LEADER PLUS

Preset LEADER Plus are high precision instruments performing high technology operations. Their structure is guaranteed by best quality components along with an interface very simple and intuitive to use. Designed and developed in the field of tooling manufacture, the **preset LEADER Plus** are also essential in sharpening centers and production units of furniture or windows, for checking the condition of the tools and their settings before being mounted in the machine. In recent years the family of the **preset LEADER Plus** has increased thanks to additional models with new combinations of diameter and height, satisfying most of the needs of market operators. **The preset LEADER Plus** is supplied with a cone-holder HSK63F.

The **structure** is entirely made in steel and ensures greater strength and hardness as well as extreme size accuracy and straightness. It is normalized for improved strength and dimensional stability in time.

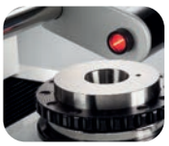
PRODUCT FEATURES



Camera is a high-resolution C-MOS camera with telecentric lenses. It offers a **field of view of 7x7 mm** (0,27"x0,27") in both Profile View and Real View mode and 40x enlargement.

Pneumatic axis movement allows fast and precise positioning of the camera thanks to a button on the ergonomic handle, whereas two manual wheels allow **micrometric movement** of both Z and X axis for best precision and accuracy.

Cold light LED ring illuminator. Light intensity regulation is possible.

OPTIONAL

Item **PRESET 105**
22" touch screen
(To be included at the time of order and replace the standard).

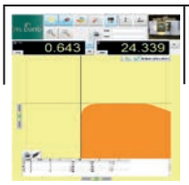
Allow to import/export create and compare a DXF drawing.

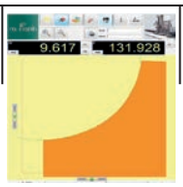
SOFTWARE - CONTI VISION SYSTEM

ALL DATA IN ONE VIEW

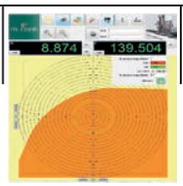
Simple, multi-language and intuitive the CONTI VISION SYSTEM software is easy for everyone. All functions are visualized, with easy to understand icons. It is possible to create up to 200 machine origins and memorize 200 tools for each machine. The tool measuring interface works like a real CAD and **any tool measure can be acquired**. The new **DXF function (optional)** allows the user to compare tool profiles against imported files or to scan and acquire a tool geometry. The new **GHOST function** permits to measure the maximum diameter and profile simply rotating the tool. **Real view tool inspection mode** clear, 40x enlargement, view of tool surface.



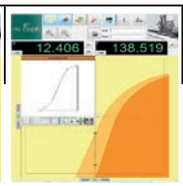
MOBILE AXIS MEASURING MODE



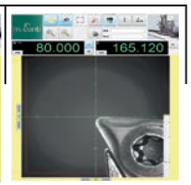
RADIUS MEASUREMENT



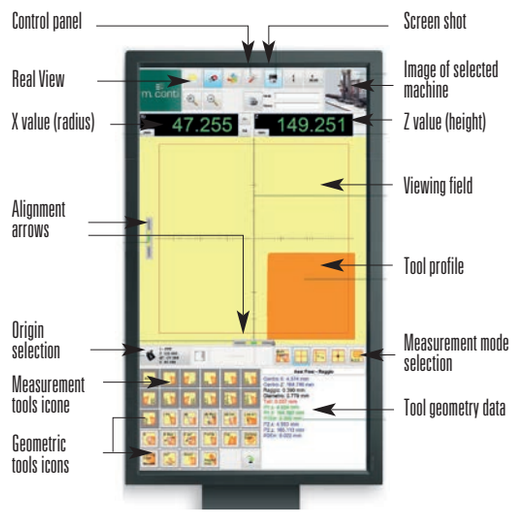
DIAMETER COMPARISON



DXF FUNCTION (optional)

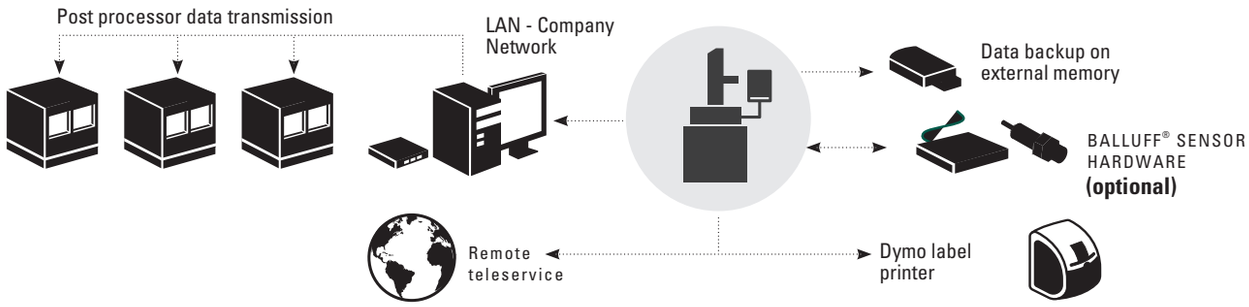


REAL VIEW TOOL INSPECTION MODE

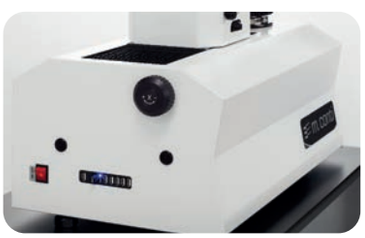


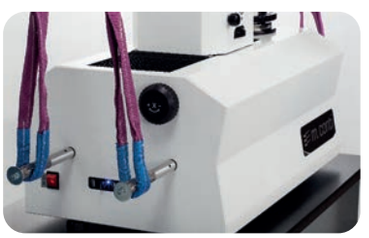
CONNECTIVITY

LAN tools connectivity to company network for tool data transmission using Post Processor. Possibility of TELESERVICE.
Connection to other data transmission systems, such as BALLUFF® **(optional)** for example, is also possible.



A project must also consider the customer's need for safety and easy of use.
This is why our presetter are equipped with removable transport handles which make any necessary movement easy and safe.

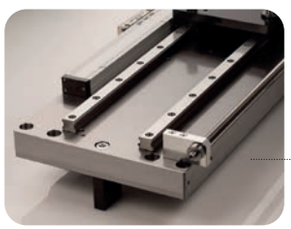




PRE SET UNIKO

Fully equipped, sturdy and extremely easy to use. Enterting the world of camera presetting is easy with this user friendly presetter. Designed and developed in the field of tooling manufacture, the **preset UNIKO** are also essential in sharpening centers and production units of furniture or windows, for checking the condition of the tools and their settings before being mounted in the machine. Powerful Post Processor to easily integrate in any working condition. **The preset UNIKO** is supplied with a cone-holder HSK63F.

The **structure** is entirely made in steel and ensures greater strength and hardness as well as extreme size accuracy and straightness. It is normalized for improved strength and dimensional stability in time.



Linearity of movement is guaranteed by **2 parallel linear guides on the X Axis** with four-row linear recirculating ball bearing with preloaded slides. **1 guide is used on the Z axis**. Guides are directly fixed to the steel base of the presetter to guarantee constant geometry alignment. Both X and Z axis are equipped with glass optical scales with a resolution (0,001) and supplied with their inspection certificate

SOFTWARE - CONTI VISION SYSTEM

ALL DATA IN ONE VIEW

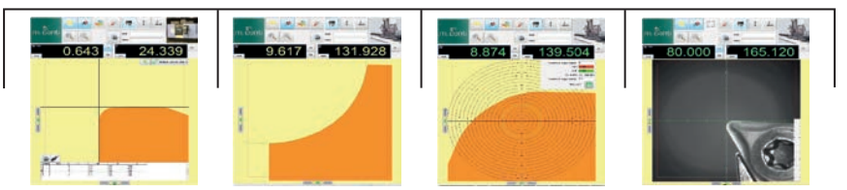
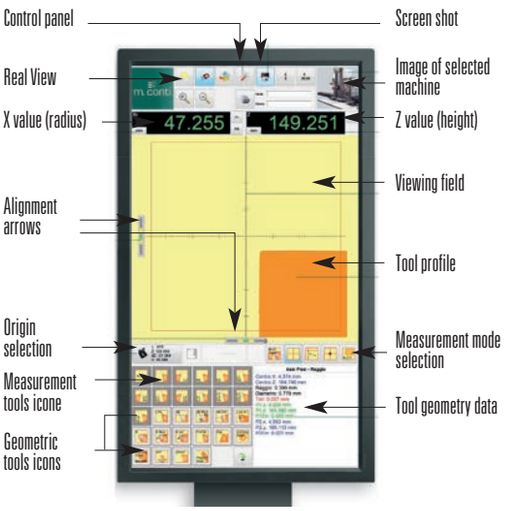
Simple, multi-language and intuitive the CONTI VISION SYSTEM software is easy for everyone. All functions are visualized, with easy to understand icons. Uploading a picture of a machine tool, creating up to 50 machine origins and memorizing 100 tools for each machine has never been so fast and easy. The tool measuring interface works like a real CAD and **any tool measure can be acquired**.

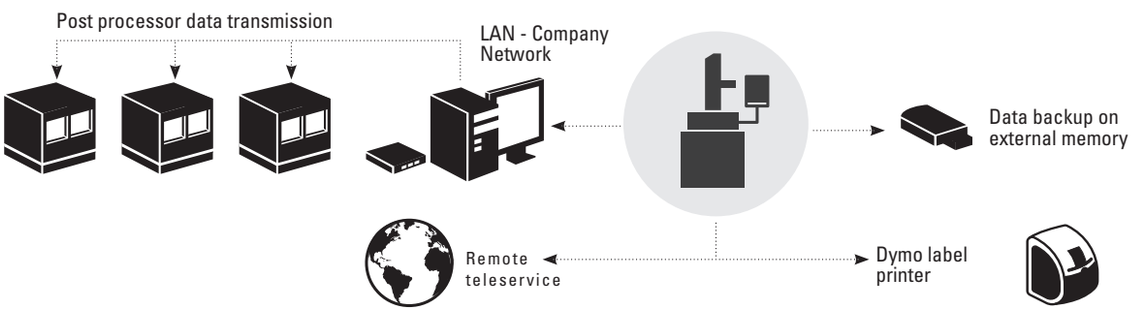


MOBILE AXIS MEASURING MODE | RADIUS MEASUREMENT | DIAMETER COMPARISON | REAL VIEW TOOL INSPECTION MODE



CONNECTIVITY

The Connectivy Pack **(optional)** is a powerful software with tool list compiling capabilities. A library of over 50 Post Processor allow the creation of CNC tool update files.



A project must also consider the customer's need for safety and easy of use.
This is why our presetter are equipped with removable transport handles which make any necessary movement easy and safe.

PRE SET P368LR

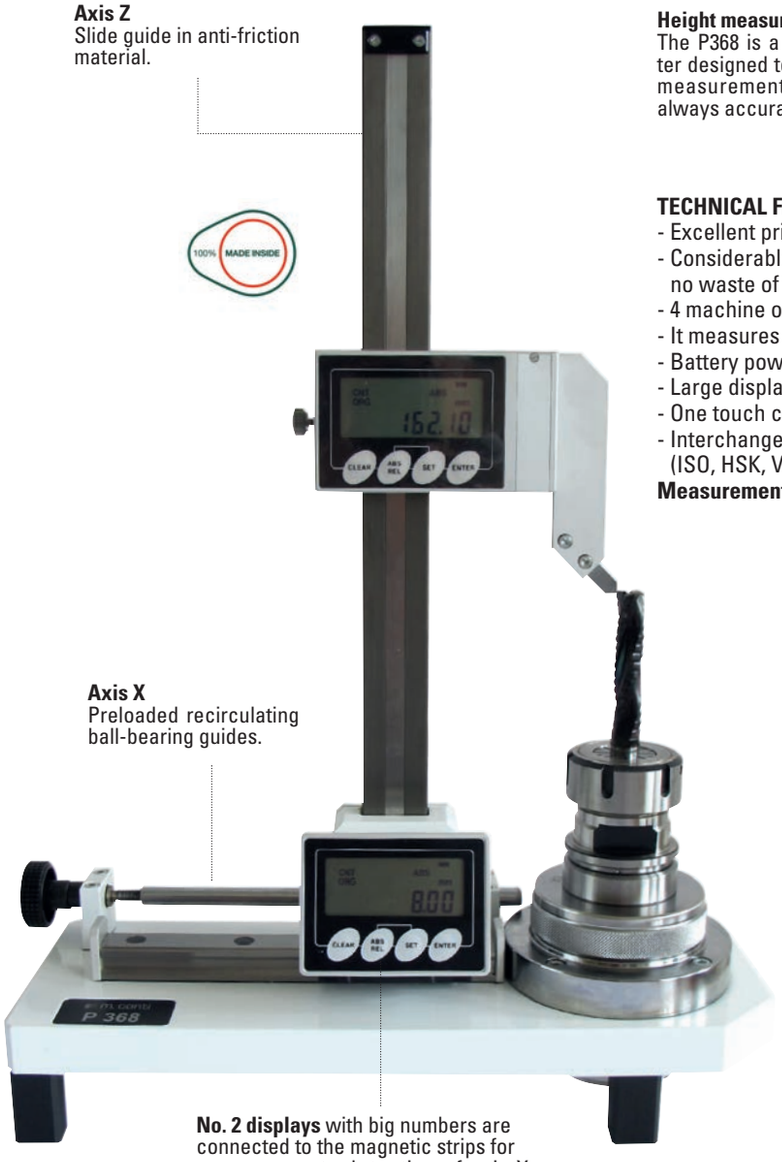
The **Preset P368LR** is a precision tool setting instrument, easy and quick to use, especially designed to meet the requirements of the NC machine operators. It is mainly used in the wood, metal and glass working field where there is a constant need to set or adjust the tools.
The **Preset P368LR** measures both the radius/diameter and the length/height of the tools. Working with different tool holders or various machines can be possible by setting up to 4 origins. The measures shown in the display can be set directly in the machine and the production quickly starts again.

Item	Measuring range
PRE-SET P368LR	H 300 mm - ∅ 250 mm
PRE-SET P368LR/HSK63F	H 300 mm - ∅ 250 mm

Height measurement
The P368 is a very solid presetter designed to make tool height measurement very simple and always accurate.

Diameter measurement
The P368 has a solid base and provides smooth and accurate linear movements. The tool radius/diameter is always precise.

Axis Z
Slide guide in anti-friction material.



Axis X
Preloaded recirculating ball-bearing guides.

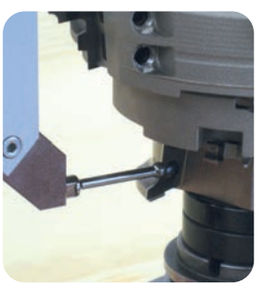
No. 2 displays with big numbers are connected to the magnetic strips for measurements detection of axis X and Z.

TECHNICAL FEATURES

- Excellent price/quality relationship
- Considerable cutback of tooling-up times, no waste of material
- 4 machine origins
- It measures all types of tools
- Battery powered – no need of electrical plug
- Large display easy to read
- One touch conversion mm/inch
- Interchangeable cone holders (ISO, HSK, VDI, arbors)

Measurement detection: Precision magnetic strip

Item
T. SFERA-P368



Spherical feeler for shaped cutters (Optional)

PRE SET P368XL

The **Preset P368XL** is a precise instrument, easy and quick to use: these characteristics have been especially designed to meet the requirements of the NC machine operator. It is used in the wood, metal and glass machining industries where the tools must be pre-set or adjusted.
The **Preset P368XL**, can be used for both measuring lengths and radius of the tools.
The **Preset P368XL** is necessary when working with tools with diameter up to 400 mm.

Item	Measuring range

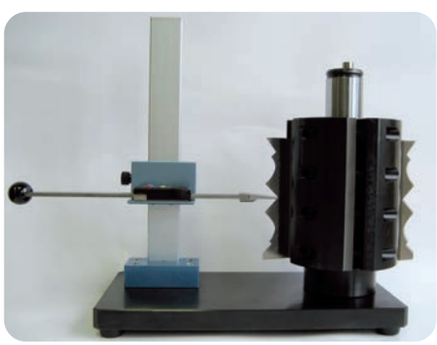
PRE SET P322 - The radius measuring stand is a precision device of simple and quick use, suitable to measure the radius of profiled cutterheads. Before mounting the tools in a machine it is absolutely important to know the correct dimensions of the cutter and set them in order to start the production without any additional concerns. The **Preset P322** was designed and developed in collaboration with technicians who work daily with these type of tools, having troubles with setting operations. The result is an optimization of the production and a good saving of time. The **Preset P322** is the best accessory beside a moulding or a CNC machine.



Main features
Arbor height: 230 mm
R max (cutterhead radius): 120 mm

Item	∅ Arbor	Height	R max
PRE-SET P322/30	30	230	120
PRE-SET P322/35	35	230	120
PRE-SET P322/40	40	230	120

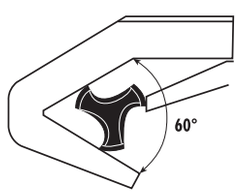
PRE-SET P322/38	1" 1/2"	230	120
PRE-SET P322/46	1" 13/16"	230	120

Digital readout:
- Resolution: 0,01 mm
- Readout in mm/inches
- Battery-power (SR44)
- Operating temperature range: 0/+40°
- Storage temperature range: -10/+60°
- Umidity: ≤ 80%

THREE POINT DIGITAL CALIPER FOR CUTTERS Z=3

ART. C.DIGIT.Z3

Caliper for measuring the diameter of router bits with three cutting edges (our items T143/T144, T153/T154 and any cutter Z=3)



- Measuring range: 4 mm ÷ 40,00 mm / 0,16" ÷ 1,73"
- Resolution: 0,01 mm/0,0005"
- Accuracy: ± 0,05 mm/± 0,002"
- Repeatability: 0,01 mm/0,0005"
- Maximum measurement speed: 1,5 m/s - 60 in/s

- Operating temperature: 0°C÷40°C
- Storage temperature: -10°C÷60°C
- Power: 1,5V SR44 (silver oxide cell) - 1 battery
- Battery life: 1 year continuous usage/
  3 years under normal operation

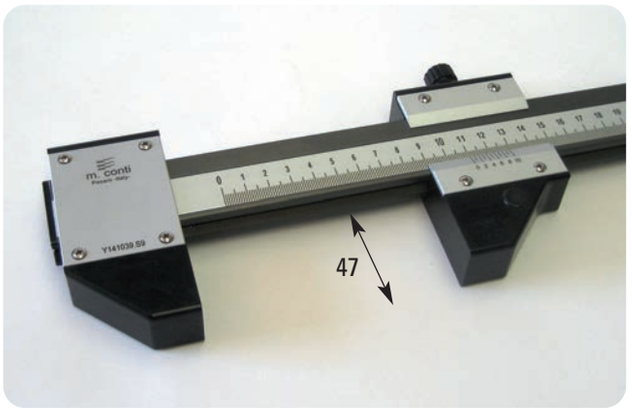
Item	Measuring range
C.DIGIT.Z3	4÷40 mm

GAUGES

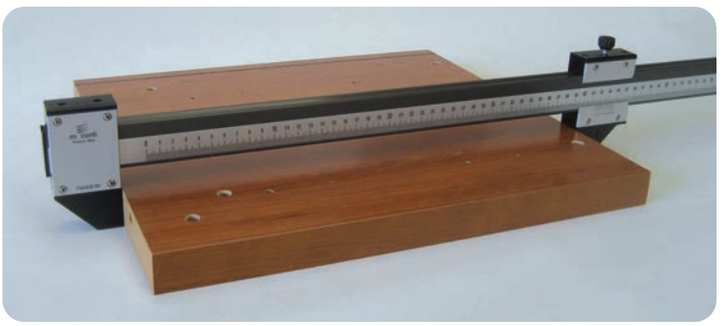
Modern panel working production technologies have made indispensable the use of appropriate measuring instruments sufficiently precise to achieve high quality standards. The line of gauges shown below has been designed to meet all woodworking measurement needs and these gauges are commonly used even in the working of **aluminium**, **glass** and **sheet metals.**
All the gauges are made of chromium-plate steel with inscribed scale and coloured black; **PRECISION** of **0,1** mm.

GAUGE FOR LINEAR MEASUREMENTS

ART. C.LIN



Suitable for measuring wood panel widths and lengths, but also for glass, aluminium profiles and sheet metal.



Item	Measuring range
C.LIN.0500	0÷500
C.LIN.0750	0÷750
C.LIN.1000	0÷1000
C.LIN.1500	0÷1500

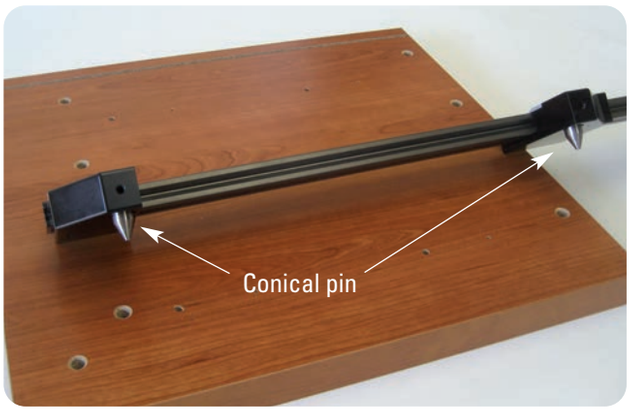
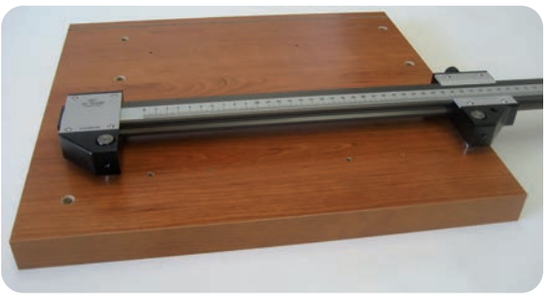
GAUGE FOR LINEAR MEASUREMENTS AND DISTANCE BETWEEN CENTRES

ART. C.LIN.PI



The length is read directly on the graduated scale, the hole distance is obtained by adding 20 mm to the value read on the scale.
Two tapered pins are supplied as standard ∅ 4 /∅ 15 mm.



Item	Measuring range
C.LIN.PI0500	0÷500
C.LIN.PI0750	0÷750
C.LIN.PI1000	0÷1000

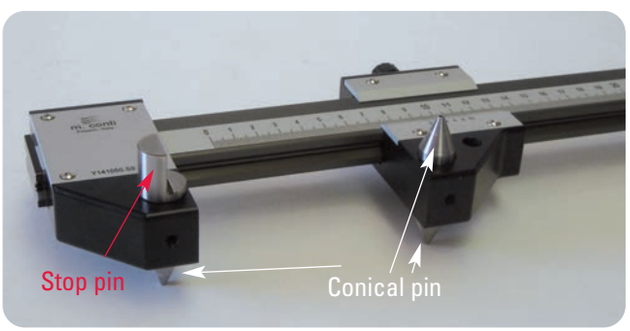
Spare parts

C.PER.1415	Conical pin for dia. 4 ÷ 15 holes

GAUGE FOR LINEAR MEASUREMENTS, DISTANCE FROM THE CENTRES OF THE HOLE TO THE EDGE OF THE PANEL

ART. C.LIN.PB



The length is read directly on the graduated scale, the hole distance is obtained by adding 20 mm to the value read on the scale.
Two pins are supplied as standard
(one tapered of ∅ 4/∅ 15 mm and one as stop).
With the left pin the distance between the edge of the panel and the centre of the hole can be measured.

Measuring of the distance of panel edge to the hole centres

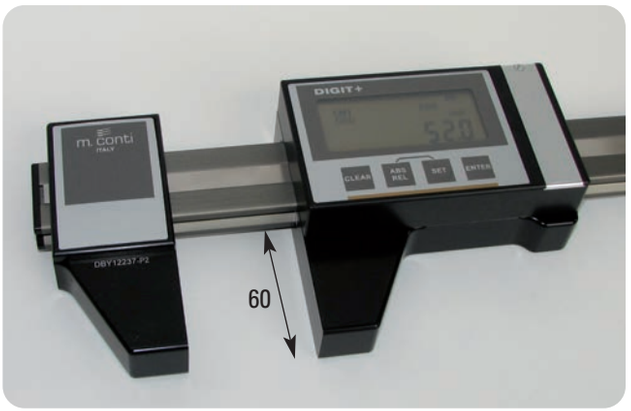
GAUGES DIGIT +

The **Digit** + digital gauges have been designed and developed to meet the need to take as quickly as possible the measurements of the dimensions of the panels in the production units.
Thanks to digital technology and to the large and easy to use display, the subjectivity of the operator is bypassed and the maximum precision is ensured.
All **Digit** + can be supplied on request with centesimal resolution (0.01 mm) and / or serial output.

GAUGES FOR LINEAR MEASUREMENTS

ART. DIGIT950



- Resolution 0,1 mm
- Light, precise and easy to use
- Battery powered (1 battery 1,5 V type AA)
- Measuring system by magnetic strip our production
- Display functions:
  - absolute/relative
  - selection of measuring mode
  - programmable automatic shutdown
  - mm/inches conversion
  - large display for easy reading
- Bars and jaws are made of anodized aluminium with 500 HV hardness on the surface

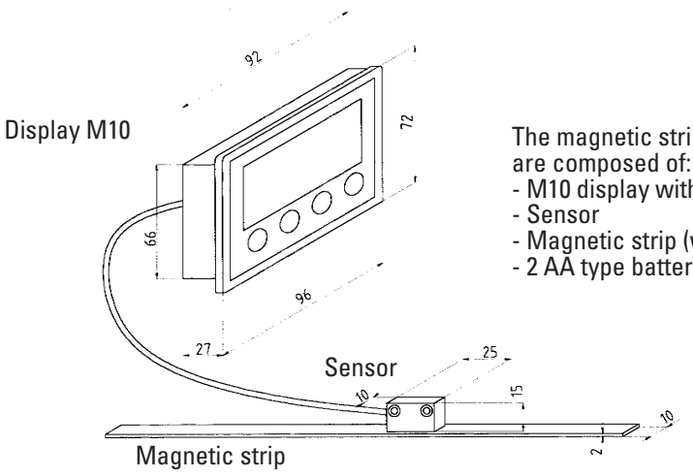
MAGNETIC STRIP MEASURING SYSTEM

A fast and accurate system which allows reading of measurements directly on the M10 display. It is extremely easy to apply – just fix the magnetic strip on a suitable surface of the machine with double-sided adhesive tape and fit the display with the sensor on the movable part. When movement is made, the display indicates the position with respect to a machine reference. The measuring system can be used on PANEL SIZING MACHINES, ROLLER BEDS FOR MITRE SAWS, BORING MACHINES, CIRCULAR SAWS etc.

Item	Dimension
K.M.1000	Magnetic strip length 1000 mm
K.M.1500	Magnetic strip length 1500 mm
K.M.2000	Magnetic strip length 2000 mm
K.M.3000	Magnetic strip length 3000 mm
K.M.4500	Magnetic strip length 4500 mm



The magnetic strip measuring system is supplied in kits, they are composed of:
- M10 display with 0.5 m cable
- Sensor
- Magnetic strip (with double-sided tape)
- 2 AA type batteries

Application on panel sizing machines for squaring cuts

MAIN CHARACTERISTICS
- M10 display dimensions: 96x72x27 mm
- battery-powered with 1.5V AA type battery with a 12-month life
- system accuracy: 0.1 mm
- 5 incremental counting
- 5 programmable offsets
- programmable zero point
- battery check
- self diagnostic in real-time
- wide installation tolerances
- parameters stored in permanent memory
- battery voltage control shown on the display
- multifunction LCD display
- 4-key display keypad
- operating temperature: 5° - 60°C
- storage temperature: -20° - 70°C
- max. humidity: 95% (condensation not permitted)
- magnetic strip: 10x2 mm
- type of magnetic strip: MT500
- distance between magnetic strip and sensor: max. 2.5 mm

ELECTRONIC WORK STATION

For modern panel production for the furniture industry, adequate quality control is indispensable.During the production, to set up the manufacturing machines, at the end of the work shift for quality control, on acceptance of semi-finished products from third parties and for product certification, the electronic work station ensures the quality of your products and cuts machine stops and the time taken for assembly, there by increasing productivity.

Item	Description
BCE 25 Y10-R	dimensions **2.500 mm x 1.000 mm** - panel thickness **55 mm** - precision **0,1 mm** with 6-position revolver

Execution with 6-position revolver to speed up feeler pin change

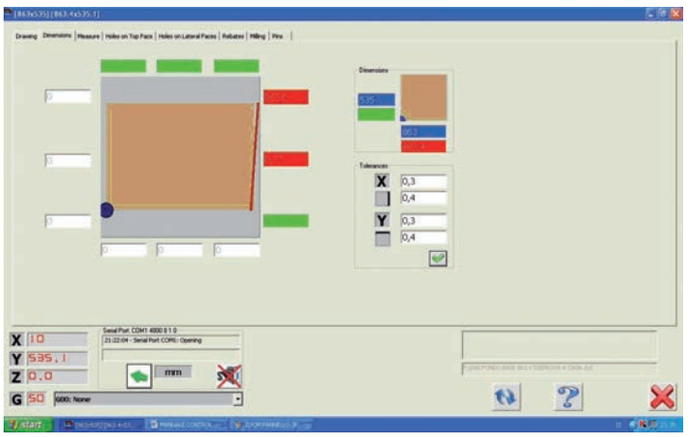
THANKS TO THIS WORK STATION YOU CAN CHECK
Panel dimensions
Out of square angles
Distances between hole centres
Parallelism and orthogonality between holes
Depth of vertical and horizontal holes
Dimension of grooves on panels
Profiles on shaped panels
Possibility of zero-setting to left and right

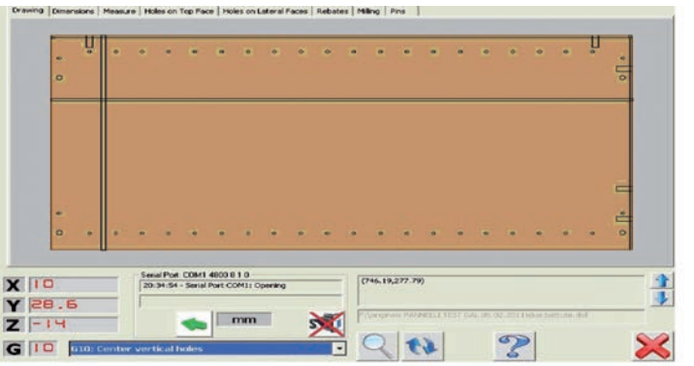
WATCH VIDEO

Blocking system by means of 2 vacuum units
Useful when small panels are measured (optional)

The electronic workstation is a real "quality control station" able to check almost all dimensions on the length, width and thickness of the panel.
The tolerance of max. 0,1mm mistake on the whole device surface is guaranteed.
First quality components as well as highly automated processing cycle ensure the extreme precision of the workstation.
Last production step consists in the complete and **scrupulous inspection effected** also using certified block gauges.
The electronic workstation can also operate in dusty environment.

SOFTWARE (optional)
For a rational use of the electronic workstation , a special software program has been developed to suit the requirements of modern furniture production and semi-finished products.
Completely worked out at **M.Conti** in collaboration with expert computer engineers and advise from important manufacturing companies, the software has been developed considering and trying to solve all producers' requirements.

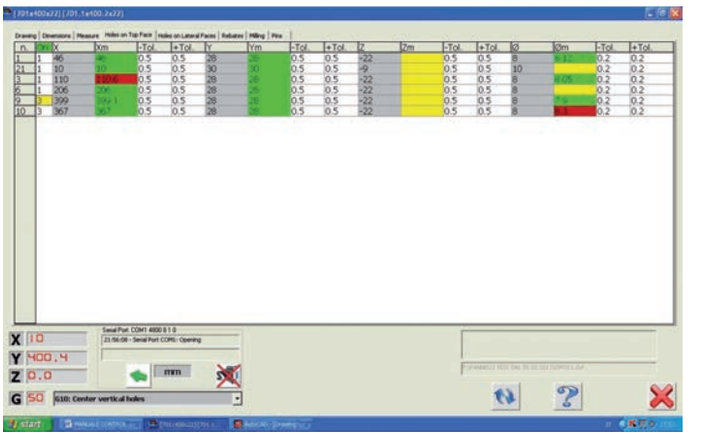


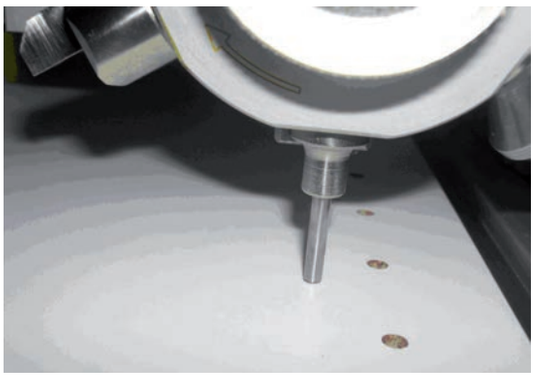


SOFTWARE SPECIFICATION

1) To **check and compare** a finished piece,
or a CAD execution of the piece.
The elements which can be measured are:
1. Panel squaring
2. Vertical holes
3. Horizontal holes
4. Cuts
5. Relative distances

Using the software program we can visualize the measuring taken on the display and compare them with those requested thus detecting any mistake in production or out of tolerance dimension
A final report showing the measures taken can be printed, stored or attached to the production batch.





2) **Graphic mode:**
To **digitise a sample piece** and create a DXF file.
Necessary if you need to check the dimensions of a sample curves panel and save them in a DXF file in order to modify it with every CAD program

Side stop,
longer execution
(optional)

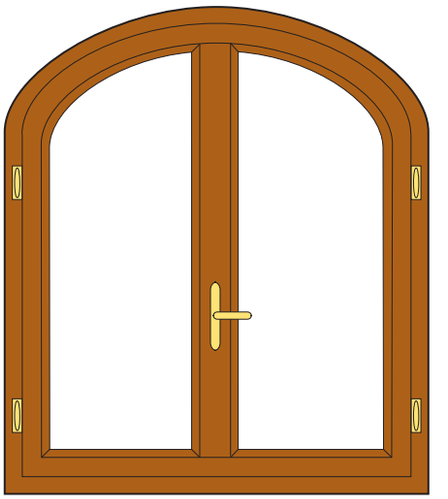
"ARKADE+ZINKEL+ELLIX" - The complete routing system for arches

The building techniques of the ancient Greeks and Egyptians had not contemplated the joining of wall openings by the use of arches. Roman times brought great technological progress. Thanks to archlinking they were able to create wider openings and so this technique became increasingly popular. The greatest development and the most gracious examples of arch construction came during the middle ages and continued through the years until more modern times when other building methods largely replaced the use of arches. Modern day building construction has rediscovered the charm, aesthetic taste and practical aspects of archlinking and because of this our technical department has developed and patented "**ARKADE + ZINKEL**". This is the only equipment on the market today capable of drawing and producing wooden, double-radius arch frames with practically no size restriction, quickly and with unmatched quality results.
"**ARKADE**" equipment can produce round and/or flat arches with minimum diameter 27 cm and maximum diameter 6m. If the "**ARKADE**" is complemented by "**ZINKEL**" equipment, it is also possible to make double-radius arches with a smaller radius between 13.5 and 80 cm and a larger radius of 3 m; and with particular accessories, even greater dimensions can be achieved. With "**ELLIX**" and some parts from "**ARKADE**" a perfect geometrical ellipses can be obtained.



PATENT nr. AN93A000054

Item

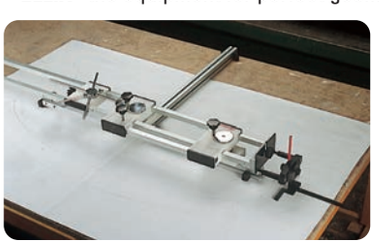
ARKADE
"**ARKADE**" complete with tracer unit and goniometer

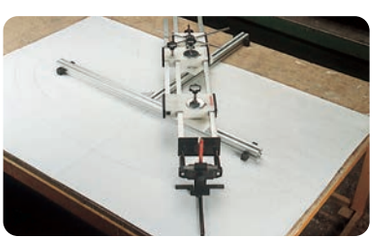
Item

ZINKEL
"**ZINKEL**" articulate accessory for double-radii arches

Item

ELLIX
"**ELLIX**" the equipment for perfect geometrical ellipse for customers already using "**ARKADE**"





Item

ELLISISTEM
"**ELLISISTEM**" is the "last born" of our special equipments for producing arch frames.
With "**ELLISISTEM**" the customer can execute a perfect geometrical ellipse.
Suitable for house restoration where the double radius arch is difficult to fit.
Simple and easy to use, it keeps the same work procedure and features as **"ARKADE" + "ELLIX"**

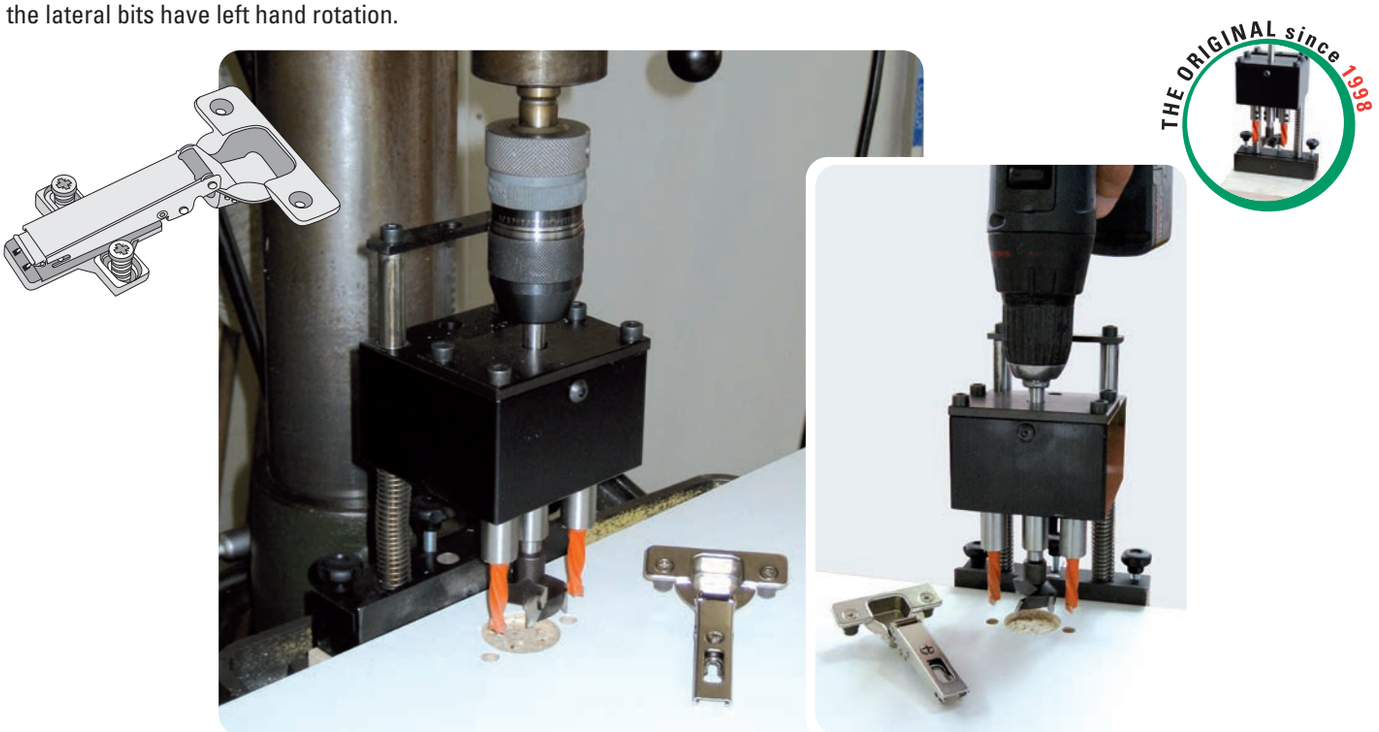
TRIMATIC FOR HINGES

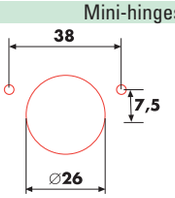
TRIMATIC are drilling jigs which allow making holes required in a single pass using a normal pillar drill or a portable electric drill. These articles are dedicated to craftsmen and hobbysts who have drilling problems when fitting hinges or positioning shelves with holes at a distance between centres of 32 mm.
The **TRIMATIC** unit with three tool-holders is suitable to make the three holes to fix the hinge in a single pass with distance between centres depending on the hinge to be fixed. Tools diameter depends on the hinge used. The central bit must have right hand rotation, the lateral bits have left hand rotation.



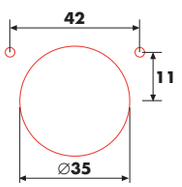
TRIMATIC 48/6 used with a pillar drilling machine

TRIMATIC 48/6 used with a portable drilling machine

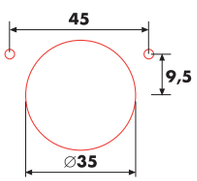
Item	
TRIMATIC 38/7,5	Mini-hinges



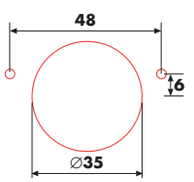
TRIMATIC 42/11	for hinges type "**Grass**"



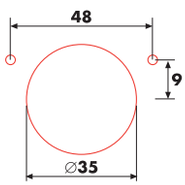
TRIMATIC 45/9,5	for hinges type "**Blum**"



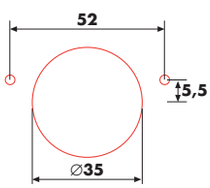
TRIMATIC 48/6	for hinges type "**Salice**"



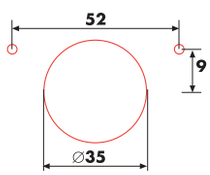
Item	
TRIMATIC 48/9	for hinges type "**Mepla**"



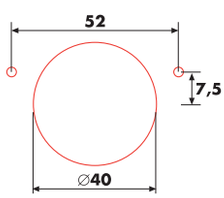
TRIMATIC 52/5,5	for hinges type "**Hettich**"



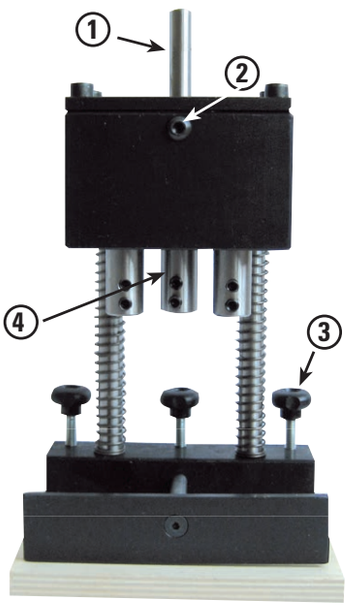
TRIMATIC 52/9	for hinges type "**Hafele**"

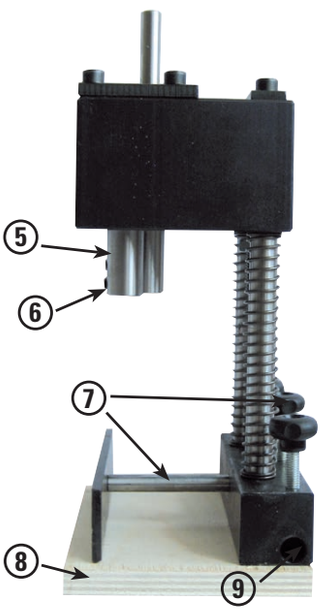


TRIMATIC 52/7,5	hinges for large thickness



Designed in **1998** is one of the most innovative products in the woodworking field. Tested and appreciated by the most important hinges manufacturers, only our TRIMATIC boring jigs allow making more than **50.000** bores.





DESCRIPTION

1) Arbor for pillar drill spindle
2) Threaded hole for greasing
3) Locking knob for stop reference rod
4) Distance adjusting screw "B"
5) Tool holder bush
6) Tool locking screw
7) Distance adjusting screw "A"
8) Equipment support table
9) Stop rod sliding hole

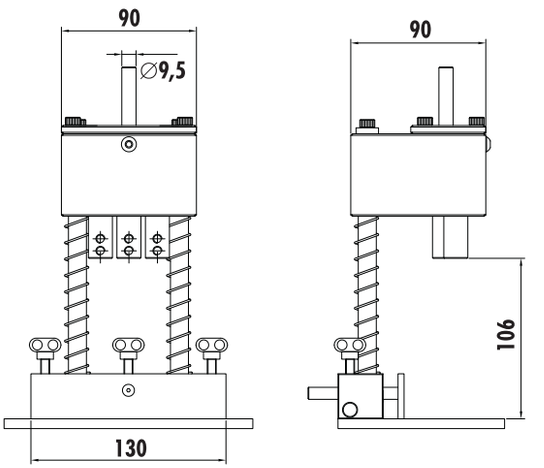
DIMENSIONS



TRIMATIC 32

The **TRIMATIC** unit with five tool holders is suitable to make a five holes set with distance between centres of 32 mm in a single pass. This device is designed for drilling holes in lateral panels (sides) of furniture for both fixing the hinge and positioning the shelves at the height desired. In the **TRIMATIC 32** the tool diameters depend on the fittings used. The central bit and those mounted in the external positions have right hand rotation, the other tools have left hand rotation.

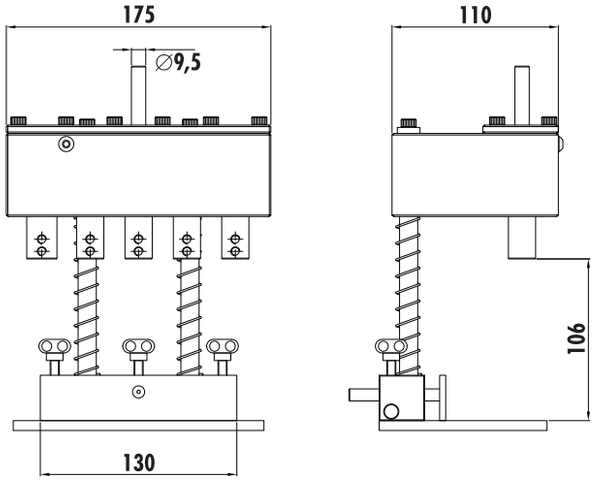
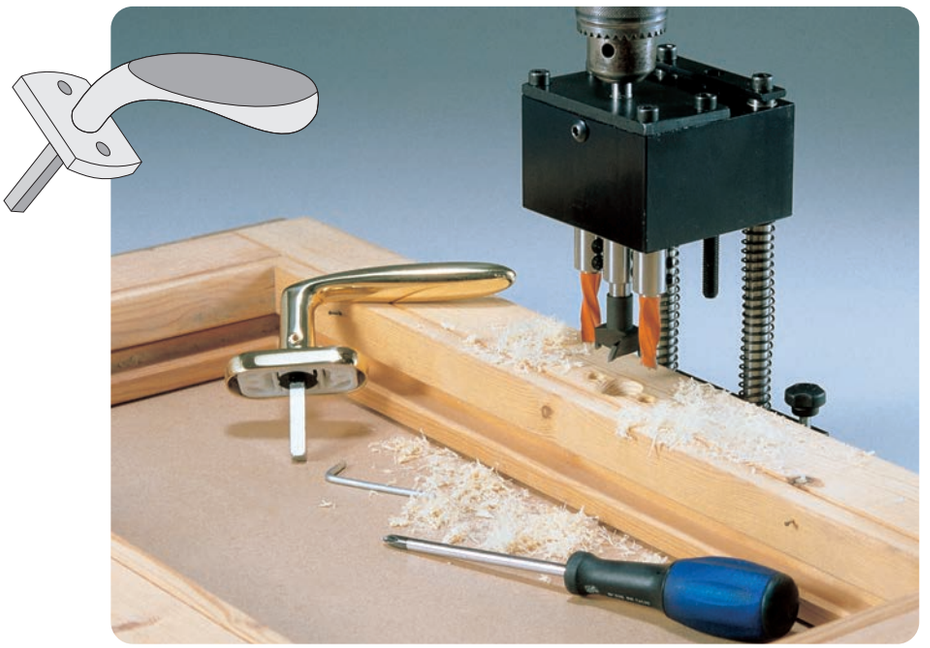
DIMENSIONS



DRILLING JIG FOR CREMONE BOLTS

TRIMATIC 43/0 was designed for window frame makers who have problems with drilling holes to fit the handle on wood, wood/aluminium and PVC windows. **TRIMATIC 43/0** allows drilling the three holes necessary to fit the cremone bolt in one single pass with a normal pillar drill or a portable electric drill.
TRIMATIC 43/0, a drilling jig for handles with a distance between centres of the retaining screws of 43 mm.



Drilling of wood and PVC window frames to fit cremone bolts

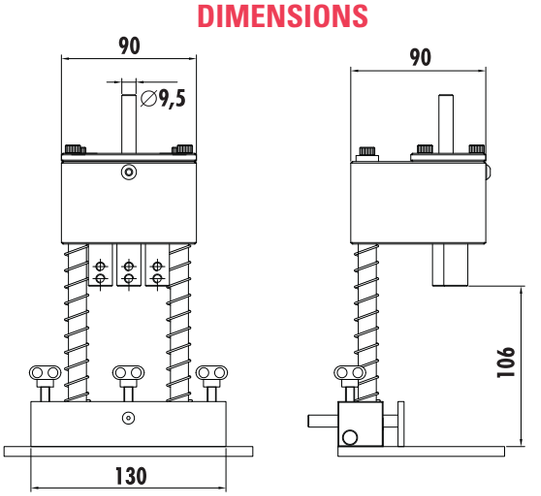
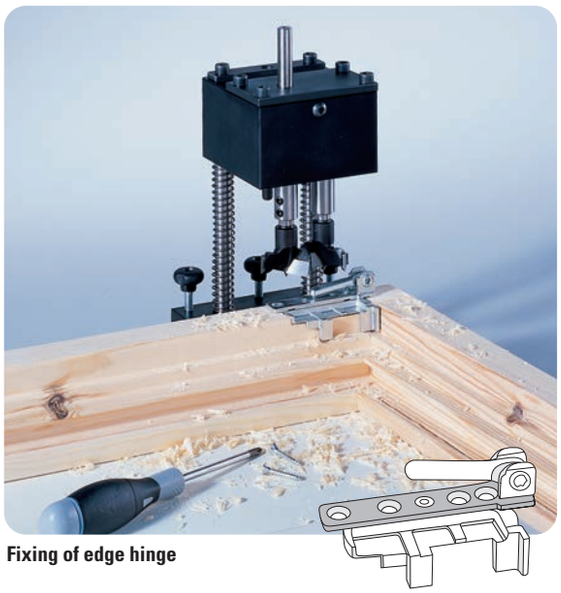
The central bit must have right hand rotation, the lateral bits have left hand rotation.

DIMENSIONS



SPECIAL DEVICES FOR ANGULAR HINGES INSERTING

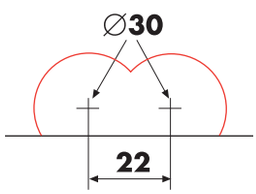
With constant attention paid to our customers' requirements and ongoing research for developing new technical solutions for helping craftsmen and small firms, our special equipments **TRIMATIC 22, 25 e 28** help the window makers to make holes for angular hinges to be mounted on windows and door-windows, in wood and wood-aluminium material. The **TRIMATIC 22, 25 e 28** can be used either with pillar drills or portable electric drills, and have distance between holes suitable for angular hinges of the following types: Siegenia (Trimatic 22), GU (Trimatic 25), Maico and AGB (Trimatic 28).

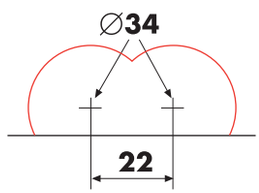


Fixing of edge hinge

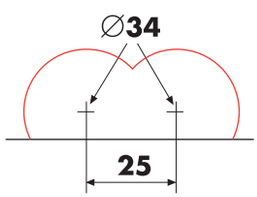
Fixing of top hinge

Item	
TRIMATIC 22	for angular hinges "**SIEGENIA**" (∅30 and ∅34) with a distance between holes of 22 mm

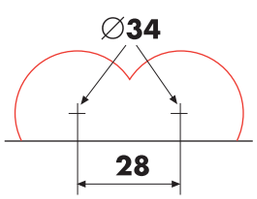




TRIMATIC 25	for angular hinges "**GU**" with a distance between holes of 25 mm



TRIMATIC 28	for angular hinges **MAICO** (type "Trend") and **AGB** with a distance between holes of 28 mm



Mount the right-hand rotation bit on the bush related to the drill spindle and the left-hand rotation bit on the other bush.

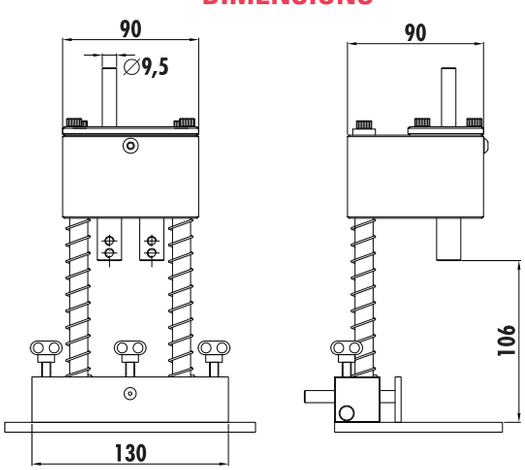
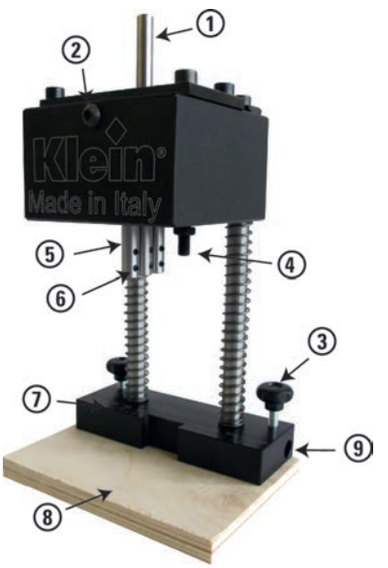
DIMENSIONS



TRIMATIC 22,4 FOR "LAMELLO® CABINEO®"

SISTEMI has always paid special attention to the demands of woodworkers and their issues in the woodworking. For this reason, we have developed Trimatic 22,4: the new and only drilling jig on the market that can drill the required three blind holes for mounting **Lamello® Cabineo®** furniture connection, in a single pass simply using a power portable drill or stationary pillar drill. It is especially thought for hobbyists, artisans and craftsmen who do not own CNC router machines.

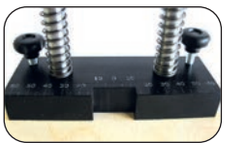


Watch the Video on YouTube

1) Arbor for pillar drill spindle
2) Threaded hole for greasing
3) Locking knob for stop reference rod
4) Threaded screw for depth adjustment
5) Tool holder bush
6) Tool locking screw
7) Basement with millimetric scale
8) Equipment support table
9) Stop rod sliding hole

Item
TRIMATIC 22,4

The special millimetric scale on the basement will help you to make the 5 mm hole in the corresponding workpiece to tighten the screw of Cabineo ® with accuracy



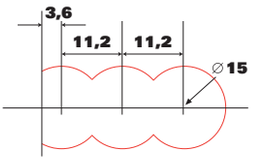
TOOLING (not included)

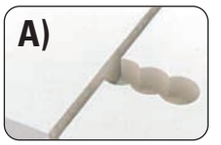
A) Equip Trimatic 22,4 with HW drill bits (item L174.150.R e L174.150.L) as per drawing (1) to make the three holes for inserting "**Lamello® Cabineo®**" connections.

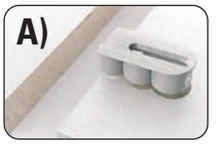
S ∅ 6	Description	Rotation
L174.150.R	∅ 15x35	Rh
L174.150.L	∅ 15x35	Lh

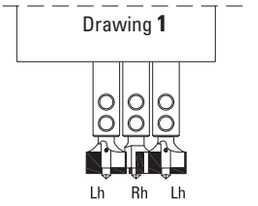
L174.150.R

L174.150.L (x2)

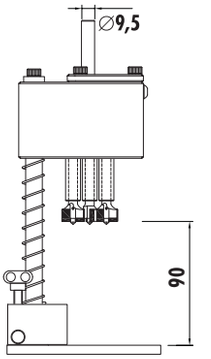








The central bit must have right hand rotation, the lateral bits have left hand rotation



B) Equip Trimatic 22,4 (as per drawing **2**) with one of the drill bits L175.050.L (for "Cabineo 8") or L175.051.L (for "Cabineo 12") to make ø 5 mm holes to fix **Lamello® Cabineo®** connections . The distance between this hole and the edge of the panel is achieved with an adjustment stop **C** (see drawing **2**) whose thickness is determined by the thickness of the panel **D**, as per table (**3**) below.

S ∅ 6	Description	Rotation
L175.050.L	∅5x8x35 - "Cabineo 8"	Lh
L175.051.L	∅5x12x39 - "Cabineo 12"	Lh

L175.050.L/L175.051.L

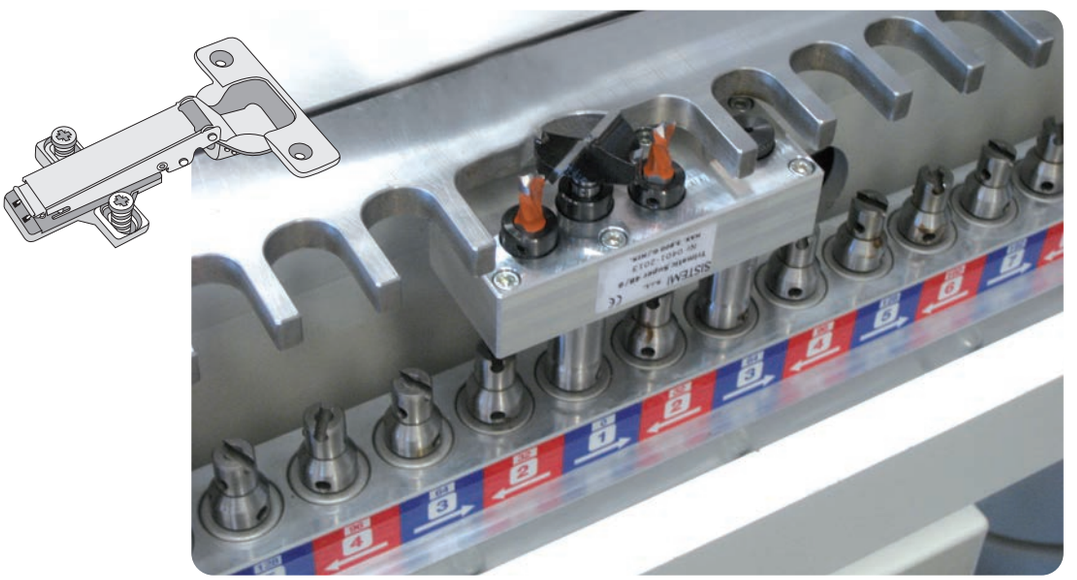
Drill bit ∅ 5 mm Cabineo 8: X= 8 mm Cabineo 12: X= 12 mm

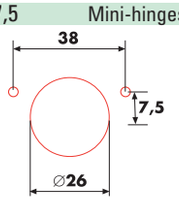
Cabineo ® is a product of Lamello

DRILLING JIG FOR MAKING HOLES FOR HINGE INSERTING

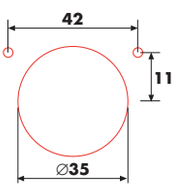
The **TRIMATIC SUPER** is a very innovative drilling jig, suitable to solve many problems to craftsmen and small industries when fitting the hinges and handles on doors, windows and cabinet doors. The **TRIMATIC SUPER** can be easily and quickly mounted on the multi-spindles head of any automatic boring machine with 32 mm distance between centres chucks. The **TRIMATIC SUPER** is very precise and fast, making in one single pass the three holes required for fitting the hinges on the cabinet doors.
At the moment, 8 types **TRIMATIC SUPER** in different patterns are available, suitable for the most common hinges: Salice, Blum, Hettich, Grass, Mepla, Ferrari, ecc. The new model 43/0, is now available for the execution of the holes necessary to fit the cremone bolt on the handles of doors and windows. The **TRIMATIC SUPER** are small-sized, 12,5x5x3 cm, but they are very solid and long-lasting devices. The diameter of the drills has to be chosen with reference to the model of hinges being used. Now, just choose the type of **TRIMATIC SUPER** you need.



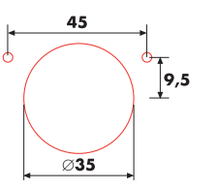
Item	
TRIMATIC SUPER 38/7,5	Mini-hinges



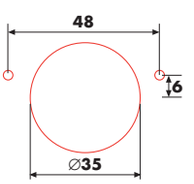
TRIMATIC SUPER 42/11	for hinges type "**Grass**"



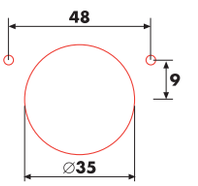
TRIMATIC SUPER 45/9,5	for hinges type "**Blum**"



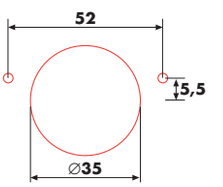
TRIMATIC SUPER 48/6	for hinges type "**Salice**"



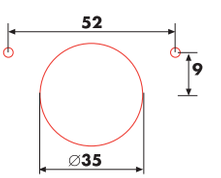
Item	
TRIMATIC SUPER 48/9	for hinges type "**Mepla**"



TRIMATIC SUPER 52/5,5	for hinges type "**Hettich**"



TRIMATIC SUPER 52/9	for hinges type "**Hafele**"



TRIMATIC SUPER 52/7,5	hinges for large thickness

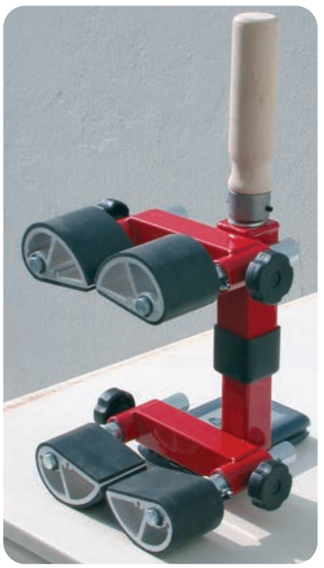
ECCENTRIC CLAMP

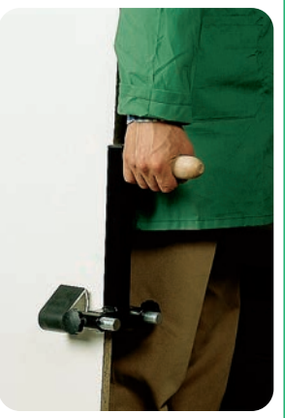
The eccentric clamp is suitable for keeping the glued wood sections with comb joints under pressure. It is tightened and slackened by turning the grip; the eccentric pressors are covered in rubber to prevent damage to the wood.



Item	Thickness range
SPP060029	Min. 25 mm - Max 75 mm
SPP060053	Min. 65 mm - Max 110 mm

LIFTING CLAMP

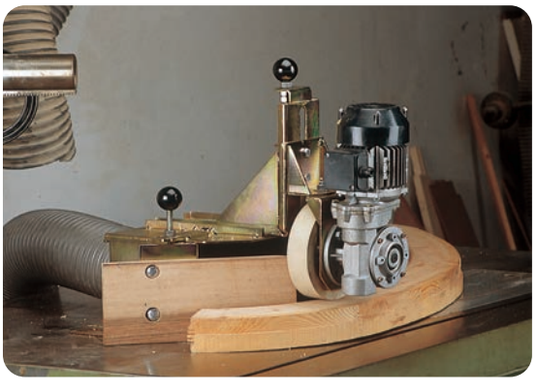
The lifting clamp facilitates the handling and trasport of large panels. It features an anatomic wooden grip and rubber covered eccentric jaws.



Item	Thickness range
SPP060047	Min. 10 mm - Max 65 mm

DRIVER FOR CURVES

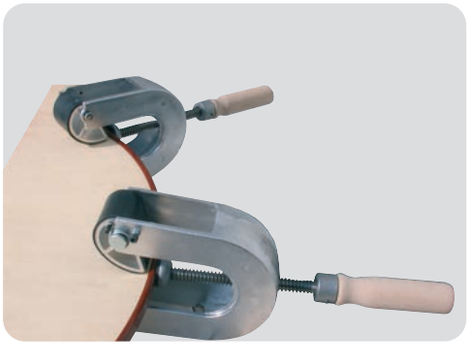
The driver for curves was conceived for greater safety during router machining on curves. It is equipped with a motor sufficient to guarantee a regular feed of about 2 m/min. so that a good quality of finish is obtained. The rubber wheel, apart from not damaging the wood, guarantees the perfect position of the piece with respect to the tools. The driver can already be applied with an arc of 25 cm radius.
2 feed rates=1,39 mt/min. + 2,78 mt/min.

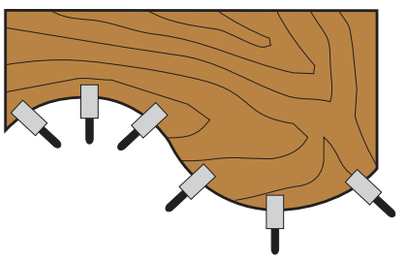


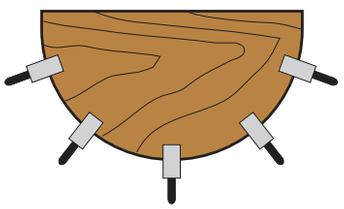
Item	Description
SPP060065	Drivers for curves 2 feed rate

EDGE CLAMP

The edge clamp is used to press the wooden lippings against the edge of the panel. The eccentric pressors are covered in rubber. This article is practically indispensable when gluing edge on curved or shaped panels.



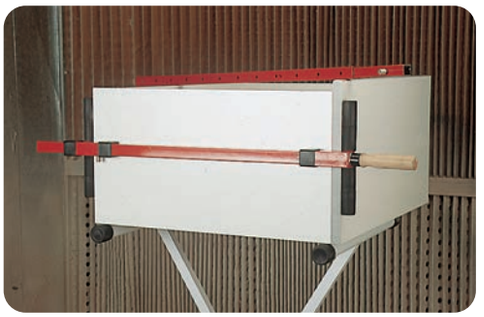




Item	Thickness range
SPP060052	Min. 10 mm - Max 65 mm

CARPENTER'S CLAMP

The carpenter's clamp is suitable for craftsmen who manufacture modern furniture. The clamp is tightened and loosened by turning the wooden handgrip.
The ends which hold the panel are covered with ribbed rubber to protect and improve the grip. With a suitable number of extensions furniture of any dimension can be assembled.



Item	Thickness range
SPP020021	Min. 250 mm - Max 800 mm

EXTENSIONS

Item	Thickness range
SPP020022	800 mm

DOOR LIFTER

Lifts, swivels and lowers. Easy foot operation for weights up to 100 kg for the installation of doors including fire doors, windows, furniture, dry walls, partitions.

Item
LIFTER100

QUICK CLAMPING DEVICES

Devices for quick clamping workpieces and for numerous applications. By simply applying pressure on the grip, once dead centre has been passed, they close securely. Horizontal models with horizontal or vertical clamping, push rod and pneumatic. Maximum quality and a virtually unlimited lifespan.

KleinWASHER Automatic Tool Washer

Sealants, lubricants, cleaning products see section 14 page 14.03

- Suitable for washing any metal parts and tools from the industry to the smaller workshop
- For tools of various dimensions, also for tool groups for windows thanks to its rotating tank with an height of 350 mm
- Heated biological operating mode
- To be used only with water-based detergent (see our item KleinCLEANUP)

Includes:

- Stainless steel housing • Rotating tank D=600 mm • Tank's capacity: 75 L
- Maximum payload: 100 kg • Maximum height of the tools: 350mm
- Stainless steel upper, under and lateral washing arms • Timer
- Thermal resistance • Single-phase 1 hp pump • Dimensions: 940x790 h930 mm
- Dimensions packing: 1210x1050 h1200 mm • Weight: 65 kg

Item	Description
KLEINWASHER	Automatic tool washer

KleinCLEANER Manual Tool Washer

Sealants, lubricants, cleaning products see section 14 page 14.03

- Can wash any type of tools or metal parts
- Easy to be used with water and spray gun
- Heated biological operating mode

Includes:

- Spray gun
- Tool holding grid
- Stainless steel tank with thermal resistance
- Air-operated double diaphragm pump 5 L/min
- Tank dimensions: 600x500 h 250 mm
- Tank capacity: 70L
- Dimensions: 700x560 h1000 mm
- Dimensions packing: 970x670 h1020
- Weight: 30 Kg

Item	Description
KLEINCLEANER	Manual tool washer

SHRINK FIT UNIT

ART. K.START.2

- **Heating time from 2 to 7 seconds**
- Provided with inductor stop rings (6 to 12) + (14 to 20) and chuck holder for HSK63F
- Heating located on the tool holder, no deterioration of the tool and tool holder
- **Self-regulated power** thanks to a microprocessor depending on parameters detected
- **Inductor rotates 180°** without disassembling
- Power supply 3x380/480V – 16A 50/60 Hz -14 kW
- Dimensions: L= 255 mm - D= 490 mm - H= 755 mm
- Weight (options excluded) 20 kgs

NB: This items cannot be sold in Germany due to commercial agreements between the producer (Elco) and their autorised dealers in these markets.

Item
K.START.2

COOLING UNIT WITH AIR FLOW

ART. K.FG500

- Air cooling unit for shrink fit chucks
- **Cooling time from 1,30 minute to 3 minutes**
- Provided with cooling stop rings (6 to 12) + (14 to 20) and chuck holder for HSK63F
- Compressed air supply: 4-6 bars
- Dimensions: L= 220 mm - D= 190 mm - H= 615 mm
- Weight: 5 kgs

NB: This items cannot be sold in Germany due to commercial agreements between the producer (Elco) and their autorised dealers in these markets.

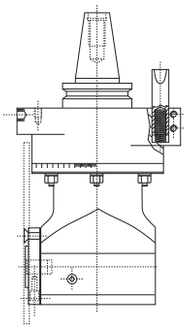
Item
K.FG500

ANGLE HEADS FOR CNC ROUTING MACHINES

For a quotation on a model not present in this catalogue, please specify:
Type of Machine and model - Type of tool holder (HSK, ISO etc.) - N° of tool exits - Tool used - Application and material to be processed

CNC Aggregate With One Exit Type MONO 90° Function line

ART. GR2.WS.FL



FUNCTION LINE. CNC Aggregate With One Exit GREASE LUBRICATION

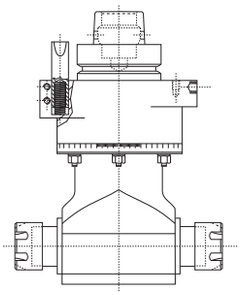
High performance in continuous operation with highest operator ease: these are the fatures of the aggregates of the FUNCTION LINE.
For Boring, Routing, and Sawing.

Technical Data:
- Machine connection per request
- Speed max.: 10,000 R.P.M. (drive)
- Speed max.: 15,000 R.P.M. (tool spindle)
- Gear ratio i= 1:1,5 - Torque max.: 20 Nm
- Temperature max.: 85° C / 185° F
- Tool interfaces: Collet ER 25, collet ER 32, saw blade connection with flange 30 mm and pitch circle 45 mm, alternatively 52 mm
- In conventional design or alternatively available with modular tool clamping system
- Rotating direction left or right
- Spindle rotating direction same as drive rotating direction
- Position of tool spindle 90°
- Aggregate can be rotated 360° around drive.

Accessories included:
- Collet nut for ER25 - Hook spanner
- 4 torx screws to fix the saw blade to the connection

CNC Aggregate With Two Exits Type DUO

ART. GR2.WZ.FL



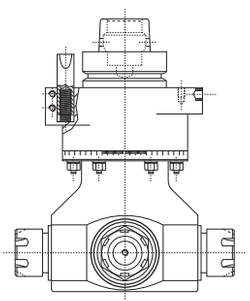
FUNCTION LINE. CNC Aggregate With Two Exits GREASE LUBRICATION

High performance in continuous operation with highest operator ease: these are the fatures of the aggregates of the FUNCTION LINE. For Boring, Routing, and Sawing.

Technical Data:
- Machine connection per request - Speed max.: 10,000 R.P.M. (drive)
- Speed max.: 15,000 R.P.M. (tool spindle) - Gear ratio i: 1:1,5
- Torque max.: 20 Nm - Temperature max.: 85° C
- Tool interfaces: Collet ER 25, collet ER 32, saw blade connection with flange 30 mm and pitch circle 45 mm, alternatively 52 mm
- In conventional design or alternatively available with modular tool clamping system
- Rotating direction left or right
- Spindle rotating direction same as drive rotating direction – one tool running same direction, one tool opposite
- Position of tool spindle 90°
- Aggregate can be rotated 360° around drive

CNC Aggregate With Four Exits Type QUATTRO

ART. GR2.WV.FL



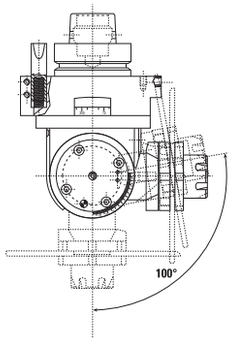
FUNCTION LINE. CNC Aggregate With Four Exits GREASE LUBRICATION

High performance in continuous operation with highest operator ease: these are the fatures of the aggregates of the FUNCTION LINE. For Boring, Routing.

Technical Data:
- Machine connection per request
- Speed max.: 10,000 R.P.M. (drive)
- Speed max.: 15,000 R.P.M. (tool spindle)
- Gear ratio i: 1:1,5 - Torque max.: 20 Nm
- Temperature max.: 85° C
- Tool interfaces: collet ER 25 / ER 32, 2 x boring and 2 x routing
- Rotating direction left or right
- Spindle rotating direction same as drive rotating direction – three tools running same direction, one tool opposite direction
- Position of tool spindle 90°
- Aggregate can be rotated 360° around drive

CNC Aggregate With Adjustable Angle And Digital Display - Type VARIO VISO

ART. GR2.WD.FL



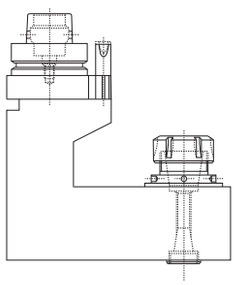
FUNCTION LINE. CNC Aggregate With Adjustable Angle And Digital Display GREASE LUBRICATION

High performance in continuous operation with highest operator ease: these are the fatures of the aggregates of the FUNCTION LINE. For Boring, Routing, and Sawing.

Technical Data:
- Machine connection per request - Speed max. 15,000 R.P.M. (drive)
- Speed max. 15,000 R.P.M. (tool spindle) - Gear ratio i 1:1
- Torque max. 20 Nm - Temperature max. 85° C / 185° F
- Angle adjustment 0 – 100°
- Tool interfaces: Combination connection ER 25, saw blade or saw blade connection flange 30 mm and pitch circle 45/52 mm with integrated Weldon connection diameter 10 mm
- Rotating direction left or right
- Spindle rotating direction opposite drive rotating direction
- Version with one single clamping screw and digital display of adjusted angle with conical pin for 0° reference adjustment
- Aggregate can be rotated 360° around drive

CNC Aggregate For The Machining Of Panels From Underneath - Type SOTTO

ART. GR2.W1.FL



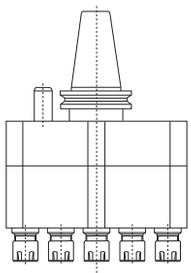
FUNCTION LINE. CNC Aggregate With One Exit From Underneath GREASE LUBRICATION

High performance in continuous operation with highest operator ease: these are the fatures of the aggregates of the FUNCTION LINE.

Technical Data:
- Machine connection per request
- Speed max. 15,000 R.P.M. (drive)
- Speed max. 15,000 R.P.M. (tool spindle)
- Gear ratio i 1:1
- Torque max. 15 Nm
- Temperature max. 85° C / 185° F
- Tool interface cylindrical 10 mm
- Rotating direction left or right
- Aggregate can be rotated 4 x 90° around drive
- Cycle operation required!

CNC Aggregate Vertical Version With Multiple Spindles In Line - Type VERTI-LINE

ART. GR2.W2.FL



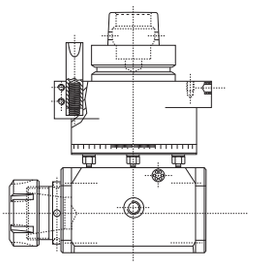
FUNCTION LINE. CNC Aggregate Vertical Version With Multiple Spindles In Line GREASE LUBRICATION

High performance in continuous operation with highest operator ease:
these are the fatures of the aggregates of the FUNCTION LINE.
For Boring and Light Duty Routing Operations.

Technical Data:
- Machine connection per request
- Speed max. 10,000 R.P.M. (drive)
- Speed max. 10,000 R.P.M. (tool spindle)
- Gear ratio i 1:1
- Torque max. 15 Nm (drive)
- Temperature max. 85° C / 185° F
- Tool interfaces ER 16 Mini, Weldon 10 mm
- Rotating direction left or right - Rotating direction spindles alternating left/right
- Aggregate can be rotated 360° around drive
- Amount of spindles variable, depending on motor spindle and collision dimensions
- Available with different patterns for hinges etc.

CNC Aggregate With One Exit Type MONO With Oil Lubrication

ART. GR3.WS.UL



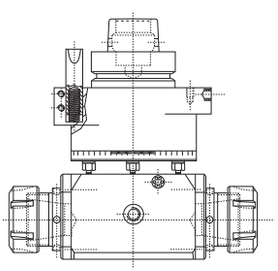
ULTRA LINE. CNC Aggregate With One Exit [90°] OIL BATH LUBRICATED

No compromises! The aggregates of the ULTRA LINE have been designed for extreme applications in continuous operation, for the use with critical material and for highest loads. Ideal for the use with a large Diameter Saw Blade or aRough Milling Tool. Using the Optimum Motorspindle Torque and the Optimum Saw Blade/Tool Speed. For Boring, Routing and Sawing.

Technical Data:
- Machine connection per request
- Speed max.: 10,000 R.P.M. (drive)
- Speed max.: 15,000 R.P.M. (tool spindle)
- Gear ratio i: 1:1,5
- Torque max.: 20 Nm
- Temperature max.: 85° C / 185° F
- Tool interfaces: Collet ER 25, collet ER 32, saw blade connection with flange 30 mm and pitch circle 45 mm, alternatively 52 mm
- In conventional design or alternatively available with modular tool clamping system
- Rotating direction left or right
- Spindle rotating direction same as drive rotating direction
- Position of tool spindle 90°
- Aggregate can be rotated 360° around drive

CNC Aggregate With Two Exits Type DUO With Oil Lubrication

ART. GR3.WZ.UL



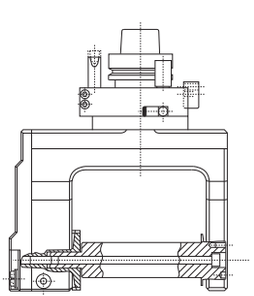
ULTRA LINE. CNC Aggregate With Two Exits OIL BATH LUBRICATED

No compromises! The aggregates of the ULTRA LINE have been designed for extreme applications in continuous operation, for the use with critical material and for highest loads. For Boring, Routing and Sawing.

Technical Data:
- Machine connection per request - Speed max.: 10,000 R.P.M. (drive)
- Speed max.: 15,000 R.P.M. (tool spindle)
- Gear ratio i: 1:1,5
- Torque max.: 20 Nm
- Temperature max.: 85° C
- Tool interfaces: Collet ER 25, collet ER 32, saw blade connection with flange 30 mm and pitch circle 45 mm, alternatively 52 mm in conventional design or alternatively available with modular tool clamping system
- Rotating direction left or right
- Spindle rotating direction same as drive rotating direction – one tool running same direction, one tool opposite
- Position of tool spindle 90°
- Aggregate can be rotated 360° around drive

CNC Aggregate With Moulder Spindle And Gear Reduction Now With Integrated Dust Exhaust Type MEGACUTTER

ART. GR3.WX.UL



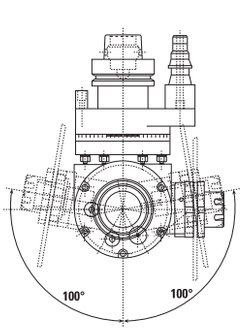
ULTRA LINE. CNC Aggregate For Moulder Knife tool OIL BATH LUBRICATED

No compromises! The aggregates of the ULTRA LINE have been designed for extreme applications in continuous operation, for the use with critical material and for highest loads. Ideal For The Use With a Moulder Spindle or a Saw Blade Package. Using The Optimum Motorspindle Torque And The Optimum Saw Blade/Tool Speed.

Technical Data:
- Machine connection
- Speed max. 11.380 R.P.M. (drive)
- Speed max. 7,690 R.P.M. (tool spindle)
- Gear ratio i = 1:0,641
- Torque max. 20 Nm
- Temperature max. 85° C / 185° F
- Tool interfaces: arbour with 30 mm diameter, 120 clamping length
- Rotating direction left or right
- Spindle rotating direction same as drive rotating direction
- Position of tool spindle 90°
- Aggregate can be rotated 360° around drive

CNC Aggregate With Adjustable Angle Type VARIO VISO With Oil Lubrication

ART. GR3.WD.UL



ULTRA LINE. CNC Aggregate With Adjustable Angle OIL BATH LUBRICATED

No compromises! The aggregates of the ULTRA LINE have been designed for extreme applications in continuous operation, for the use with critical material and for highest loads. For Boring, Routing and Sawing.

Technical Data:
- Machine connection per request
- Speed max. 13.760 R.P.M (input)
- Speed max. 15.000 R.P.M (output)
- Gear ratio i 1:1,09
- Torque max. 22 Nm
- Temperature max. 85° C / 185° F
- Angle adjustment 2 x 0 – 100°
- Tool interfaces Combination connection ER 25/saw, collet connection ER 25 as well as saw blade connection with flange 30 mm, pitch circle 45 mm, alternatively 52 mm
- Rotating direction left or righ
- Spindle rotating direction opposite drive rotating direction
- Adjustment regulation with nonius
- Aggregate can be rotated 360° around drive

DISPLAYS

BASE - **STANDARD** - **PROFESSIONAL**, these are the new displays **Klein** designed to have a modular system of slatted panels with two, three or four rows of hooks on which to hang products.
In order to exhibit not packed items one or more shelves can be also hung.
Standard and Professional displays can be supplied with sliding glass windows and locked with a safety lock.
The great flexibility and visibility of the product assortment in the new displays improve the offer range and thus the service to customers.

Klein®

BASE

1 modular panel

Small display, ideal for starting with a basic assortment
Dimensions (cm): 110 (L) x 90 (H) x 30 (P)

Display customizable

DRAWER UNIT

Modular drawer unit

Elegant, sturdy Klein drawer unit with an innovative, modern design and great modularity, where you can keep all your Klein tools in a clean, secure, well-organized place. Say good-bye to messiness and damaged tools.
Now, with the new Klein drawer unit, you can put your storeroom in order in a convenient, functional way.

Dimensions (cm): 50 (L) x 110 (H) x 37 (P)

SMALL OUTSIDE BUT LARGE INSIDE
the Klein drawer unit takes up little space but can contain countless articles in its 10 drawers and 80 containers (8 containers per drawer).

- **STURDY**
  since each drawer can hold around 8 kg.
- **LIGHT**
  since it's made of a high-strength polypropylene co-polymer.
- **SECURE**
  since each drawer has its own key.
- **PRACTICAL**
  since it can be equipped with 4 casters for convenient movement or with slip-resistant feet.
- **CONVENIENT**
  since it features a wooden top which acts as a practical surface for taking notes or keeping tools.
- **VERSATILE**
  since the tubs in the drawers can be removed easily as desired.

Whether it's placed next to a CNC router, or close to a point-to-point boring machine, along the panel production line or in any carpentry shop, a new Klein drawer unit can be a real help in keeping the tools you use every day in perfect order and in good condition.

The new Klein drawer unit can hold a wide range of tools.
Ask our customer service how to receive it.

You can receive the new modular drawer by purchasing the following products

The drawer unit can be customized by replacing one or more drawers with others and/or replacing one or more single articles with others at your wish. The personalization must be agreed with our Customer Service

Instructions of use:

SAFE HANDLING:

All Europaen and National safety regulations shall be adhered to include the safety requirements as set out in EN 847-1.

TRANSPORT :

Transport only in suitable packaging. Danger of damaging the cutting parts.

Caution: danger of injuring by sharp cutting edges! Wear safety gloves.

ASSEMBLING THE TOOL AND SETTING THE MACHINE:

Inspect the tool body and cutting parts for damage before mountingit in the machine.
Damaged tools are to be checked by an expert. Do not use a deformed tool.
All clamping area shall be free of pollution, grease, oil and water.
Tighten clamping screws and nuts by using appropriate spanners and the recommended torque value.
Danger of injuring by parts coming off!

While mounting, it shall be ensured, that the tool is clamped on the special clamping area.
Cutting parts shall not come in contact with clamping elements and/or machine parts.
When using stacked tooling ensure that the cutting parts do not foul each other.
Check the cutting parts and basic bodies for damages.

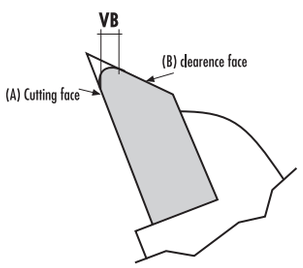
The tools shall be mounted, locked and activated as per instructions of the machine manufacturer.
Check the machine data and the direction of rotation.

Starting the machine during the tool, change is not allowed (see handling instructions of the machine).
Danger of injuring! Improper stopping of the tool, e.g. by lateral pressing, is not allowed.

After a tool breakage the collets also have to be exchange. Tools with cracked bodies have to be taken out of service.
Repairing such tools is not allowed. Carefully demount the tool.

MAINTENANCE:

Clean the collet and the tool holder regularly and before inserting the tool. Regular cleaning increases the operational safety.
For reason of working safety, the cutting parts at the latest have to be serviced when:



When the wear mark VB on the cutting parts has become more than 0.2mm – especially observe the main wear zones.
(see section Servicing, modifying, sharpening)

Woodworking tools are to be protected against humidity in order to avoid corrosion.
The cutting parts have to regularly cleaned from resin and glue (built-up edges) this increasing thus the performance time and the operational safety.

Detergent can irritate skin and eyes and damage the tool.
Protect hands and eyes while cleaning.
Only use appropriate detergents and follow the instruction of the detergent producer.

Instructions of use:

SERVICING, MODIFYING AND SHARPENING:

Only experienced specialists are allowed to sharpen the tools as per instructions of the manufacturer.

Service and modification shall only be done by the manufacturer or by specialised workshops. Risk of tool-breakage. Only those spare parts are allowed to be used, which match the requirements of the original spare parts of the tool manufacturer. Tolerances, that guarantee a precise clamping, have to be kept.

Markings of the tool, which have been affected by modification / re-tipping, have to be updated.
Name and logo of the modifying / re-tipping company have to be added.
Specialists/specialized workshops shall be experienced in the relevant:

- up-to-date engineering referring construction and design;
- national regulation;
- appropriate safety regulations and standard.

They shall have:

- the standard equipment and
- the capability of doing these operations.

After any sharpening, servicing or modification process, it shall be ensured, that the tool meets the requirements of the European Standard EN 847-1, EN 847-2 and EN 847-3.
Re-tipping of cutting plates is only allowed by specialists who are experienced in brazing process referring tensions in the body and the cutting material.
The design of composite tools (e.g. tools with brazed cutting plates) is not allowed to be changed.

Symbols

	**Consult service manual**
	**Insert safety lock before getting in hazardous area**
	**General modatory action**
	**Wear safety gloves**
	**Danger** (general prohibition)
	**Do not operate with damaged blade**
	**General danger**

Safety regulations

The most important rules in the production of tools are regulated by the European standards En 847, sections 1 to 3 “Tools for Woodworking - Safety requirements”. Here are defined the minimum requirements to which, according to the current state of technology, must meet a tool for working wood, in order to be considered safe.

European standards:

EN 847-1	EN 847-1 Milling tools, circular saw blades
EN 847-2	EN 847-2 Requirements for the shank of shank-mounted milling tools
EN 847-3	EN 847-3 Requirements for clamping devices

Wood

Wood is a natural resource that is both always renewable and crucial to mankind. Other resources come to an end, but wood will always be there, as long as we look after our forests and only cut down plants once they are fully grown, so that can give new plants the space they need to grow. Wood is healthy, strong, durable and diverse, and is available in an infinite range of colours, grains, shades and knots. A wood product will never be an exact copy of another; it will always be inimitable and exceptional.

HARDNESS:
Wood is classified according to its hardness into one of three categories: hardwood, semi-hardwood or softwood. This order respects its values as well. Exotic woods are among the hardest ones, which is why they are held in greater esteem. Nonetheless, others include our native hornbeam, boxwood, acacia, olive tree, pear tree and ash - just to name some of the most popular hardwoods used in modern woodworking. In terms of semi-hardwoods, some of the most commonly used are cherry, beech, chestnut, walnut, elm, plane tree and alder, while the following are softwoods: fir, birch, poplar and linden. Balsa and samba (exotic) are so soft that they can be scratched using your nails.

LIGHT AND HEAVY:
some woods sink like stones as soon as they are placed in water, others instead are as light as polystyrene. Some woods are beautiful, others are not particularly attractive, but all are useful. Recognising different types of woods without hesitating, weighing up their potential and being able to see how they can be used to the best of their advantage are essential skills required of all those who want to work with wood in a proficient manner and achieve good results. Wood is classified according to its origin, and can be either European or exotic. The first, obviously, comes from trees that grow on the European continent, such as birch, elm, linden, maple, walnut etc., and include a number of resinous woods, such as fir, pine, Swiss pine, cypress, yew and larch. The second are exotic tree species from continents other than Europe (North America, Africa, etc.). Without wanting to disparage local woods, we must say that the latter are held in higher regard as a whole.

The most popular woods for woodworking

Cherry

Ebony

Beech

Mahogany

Walnut

Rosewood

Pera Tree

Pine

Briarwood

Oak

Teak

Wengè

General sale conditions

Unless otherwise agreed in writing

ORDERS
Whether direct or indirect, these are only accepted with our approval and irrevocable on the part of the purchaser.

PRICES
Are only a guide and are not binding. Those correct at the time of forwarding will be applied.
Pr1ces for special tools may be varied at any time to allow for increased costs of materials and manufacturing as well as any further costs arising during the time taken to execute the order.

PACKAGING
Is always invoiced at cost price.

FORWARDING
Ex-factory (Pesaro). Goods always travel at the purchaser's risk. In the case of forwarding by postal service, Sistemi s.r.l. can accept no responsability for goods which fail to arrive at destination or which arrive damaged in any way.

DELIVERY
Is not binding and therefore, apart from our company being exonerated from any claims, it is implicity dependent upon the supply of raw materials as weel as any production difficulties arising due to events beyond our control.

GARANTEE
Under conditions of normal usage we undertake to replace tools we consider to be defective.
This guarantee does not extend to tools showing normal wear and tear, evidence of damage or tools which have been used incorrectly.

CLAIMS
Must be made in writing within 8 days upon receipt of goods. If the claims is made within the specified limits, is valid and justified, the purcheser has the exclusive right to substitution of good or credit for the same amount, excluding any other indemnity from the company.

SMALL ORDERS
For administrative reasons the minimun order value is set at 100,00 €.

SPECIAL TOOLS
In cases where these are specifically requested, the order carried out may involve quantities higher or lower than those specified in the order, depending on the number of items.

PAYMENT TERMS
Must be made directly to our head office in the form agreed. If payment is delayed for any reason, interest at bank rates will accrue from the date payment is due, including any eventual further expenses.

JURISDICTION
In the case of any legal contention the Court of PESARO will have full power of jurisdiction.

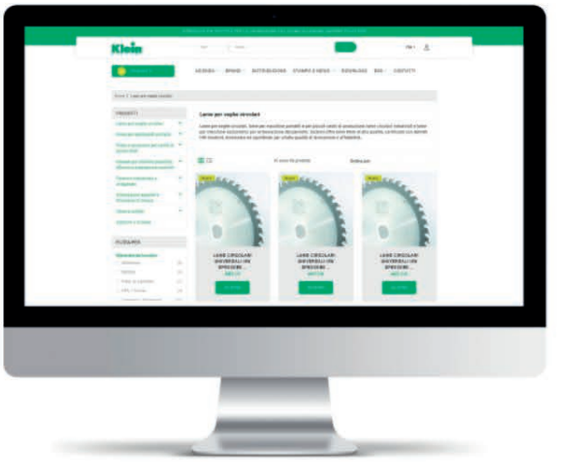
The B2B shop Sistemi Klein

Home | **The B2B shop Sistemi Klein**

Find out how our b2b e-commerce works

TO VIEW THE SHOP PLEASE
LOG IN AND START BROWSING!

SIGN IN



Our shop is thought and designed exclusively for our customers/dealers and companies of woodworking, aluminum and PVC. We decided to develop an e-commerce to meet the needs of all our customers who want to purchase a limited quantity of products. check our stock in real time or who want to speed up the purchasing process.

Following the trends, the idea of implementing a shop to our corporate website seemed to us the best solution to grow and meet the many demands of today's market. Because we at Sistemi Klein pay attention to what is new and what is happening around us. We always want the best for our customers, which is why we offer a service specifically tailored to their needs.

The Sistemi Klein e-commerce works like a classic online shop with purchasable products, personal account and shopping cart. The only special feature is that you must be logged in to the site in order to consult the prices. In this way we make the consultation of our online catalogue exclusive only to customers who really intend to make a purchase or those who are most loyal.

ROUTER BITS CARE AND MAINTENANCE GUIDE

A correct cutter care is essential in order to preserve cutter performance and prolong its life.
Keeping in mind our advices will guarantee the maximum tool protection, increasing its productive efficiency.

Router cutter care

Keeping cutters always clean is fundamental. After having used the router cutter in routing operations, remove it from the collet and clean it with an anticorrosion agent, like our KleinPROTECT , avoiding, in this way, any rust or oxidation problems. Cutting edges must be kept clean, without resin or other residues. Doing so, you will limit overheating during routing operations and avoid material finishing problems. It is important that the shank's surface is clean and smooth. In case the shank appears damaged or with corrosion signs, it is necessary to clean it with a fine wire wool and then spray it with our protective lubricant KleinDRYUP. Ball-bearing guides and solid pilot pins must be kept clean as well. When you handle solvents, it is recommended to wear rubber gloves to prevent skin irritation and use protective glasses.

Note: You should clean your router bits more frequently when cutting solid wood (like pine, fir, oak…) or other timbers rich with resin. The regular use of our KleinDRYUP over the surface of your tool, before cutting operations, will reduce the accumulation of resin and other residues, by creating a protective and resistant micro barrier which will reduce friction during cutting operations. This will allow for an increase in tool life up to 30% more.

Prolonging the life of your cutter

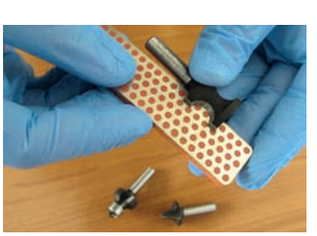
When working on a router table, modify and adapt the height of the cut in order to prevent the excessive wear of the cutter. In this way, the wear will spread along the cutter more evenly. The life of a flush trim router bit can be extended up up to 200% more by cutting only 3mm at a time.

Keep the cutting edges efficient

Using router cutters not sharpened can lead to poor results, overheating and adding unnecessary pressure to the cutter. Therefore, the cutting edges must be kept sharp. When the router cutter does not appear sharp, it is recommended to make it re-sharpen professionally.

Cutter Maintenance

In order to maintain the cutter ready to use, it is recommended the usage of a diamond sharpening stone. This can be done by sharpening on the flat face of the tip only. Remember to hone each face an equal number of times. To carry out this operation, we suggest you to use one of our diamond sharpening stones, like our item A4F or WS7F.



Router cutter re-sharpening

If the cutter appears blunt, chipped or not sharpen, it must be re-sharpened professionally. This procedure, however, will remove a good quantity of carbide and, consequentially, weaken it. In a few cases, the chips may be so deep that it would not be possible to sharpen because the tungsten carbide left would be too thin. In many case with cheaper and less expensive cutters it can result uneconomic to re-sharpen them. Using our iprofessional Klein router bits, in normal circumstances, is possible to carry out a professional re-sharpening up to 4 times. This characteristic turns our router bits into the best deal in the market in terms of duration for a given price.

Storing your router cutters

After using your cutters, it is essential that you store them in a way that the cutting edges do not touch. Therefore, avoid storing them together in a drawer or a box. The best way is to perform holes, apart from each other, with a diameter of the size of your cutter's shank, on a large piece of wood or plastic. In this way, your router cutters will not be touching and, also, will be easily recognizable. Alternatively, you can also use a specific router cutter holder.

USEFUL TIPS

In order to avoid a poor finishing is important that the router cutter is well sharpened. When the cutter edge consumes too rapidly, the cutter's wear increases and, consequentially, his productivity diminishes. If this happens, try to reduce tool's vibrations to the minimum and, increasing its feed speed, reduce also the rotation speed.
When your router cutter overheats, also turning the wood black (in jargon, burning the part), try to slow its rotation speed down, increasing, also in this case, its feed speed.
